Hello;

I am requesting that NRC Commissioners vote YES to affirm the recommendation of their own highly trained technical staff's call for installing filtered vents for radiation on all Mark 1 And Mark II nuclear reactors, including Vermont Yankee, in Vermont - 10 miles from my house.

European reactors have installed filtered vents years ago when it was established beyond a doubt that the small weak containments on these reactors would fail during a major accident as in Japan's Fukushima reactors. Japan is requiring filtered vents for their remaining reactors.

I woud like to request the US do the same - and require vents for the reactors and help to keep our communities and environment as safe as possible.

Thank you;

Dr. Tamara Stenn
