Jeff,

Ignore what I said before. I happen to have the USBR May 2010 training material on my laptop here at home.

Here is the chapter that describes key input parameters of which reservoir level is one of them (see page 3-9).

Fernando

Fernando, in our education we have seen a discussion that reservoir level is a key input parameter to flooding and/or dam failure analysis. I believe this was in the material and discussions from the USBR class. Can you find me this reference?

Thanks.

Jeff
