Subject: RE: Dam Failure and Flooding Protection Issues

Veronica,

There is some interesting albeit limited information on dams and external flooding affecting a Slovenian site in this report. I keep hearing from NRR and RES about an effort to address increases in severe precipitation hazards in parts of the US (which mirrors the seismic hazard issue), but I haven't yet found out exactly is involved in this. They may be interested on this international experience since it presents a case where modifications to the upstream basin have increased the potential for flooding at the site, with a recommendation that improvements to flooding protection be looked into.

Thanks,
Fernando

I figure you would be interested on this. Good lunch break reading material.

See pages 15 and 73 of the Slovenian National Report for the Convention on Nuclear Safety. This report is **not** publicly available. Please handle accordingly.
