Dear Mr. Shaffer:

APPLICATION TO AMEND EXPORT LICENSE XSNM-3622/01 TO ADD INTERMEDIATE FOREIGN CONSIGNEE FOR ENRICHED URANIUM SUPPLIED TO THE INSTITUTE FOR RADIOELEMENTS FOR USE IN THE PRODUCTION OF MEDICAL ISOTOPES

Enclosed is a Department of Energy (DOE), National Nuclear Security Administration (NNSA), application to amend export license XSNM-3622/01. The license amendment is required to add an intermediate foreign consignee involved in the production of the medical isotope Molybdenum-99 for the Institute for Radioelements (IRE). Export License XSNM-3622/01 was issued on September 6, 2012, to authorize export of enriched uranium feedstock for IRE to the Compagnie pour l'Etude et la Réalisation de Combustibles Atomiques (CERCA) Romans facility in France for use in the fabrication of targets and irradiation in the BR-2 Reactor in Belgium, the High Flux Reactor in the Netherlands, and OSIRIS Reactor in France. **This application requests that the LVR-15 Reactor in the Czech Republic be added as an intermediate foreign consignee where enriched uranium targets will be irradiated to support Molybdenum-99 production. There are no other changes in the application.**

The application to amend XSNM-3622/01, NRC Form 7, has been determined to be unclassified, non-sensitive. An Interagency Agreement between DOE and NRC was executed on April 15, 2009, for NRC export licensing services and fees, and sufficient funds are available for processing this export license.

IRE is actively working to implement a plan to convert to low enriched uranium targets used for medical isotope production. In the interest of supporting the production of medical isotopes, the NNSA Production Office requests that the review process be executed to support issuance of the export license in April 2013.
