Rockville, MD 20852

Dear Chairperson Macfarlane,

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to any restart of the San Onofre nuclear power plant before the Commission completes its comprehensive investigation and provides full opportunity for public participation.

Southern California Edison (SCE) is seeking to shortcut the license review process by urging the NRC to declare that a license amendment that would enable the restart of the San Onofre facility at 70% power involves no significant hazards. We believe that the public deserves a full and transparent review of the failed San Onofre generators before the NRC considers any potential restart.

In a word play, Edison claims it seeks a "license amendment" a phrase that properly refers only to the process provided by an Adjudicated License Amendment with sworn witnesses, evidentiary hearings and a judicial decision.

Speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate given the troubled history and current condition of the plant, let alone the level of public concern.

SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Please completely dismiss Edison's request. This latest maneuver by Edison appears to be merely a last-ditch, desperate attempt to avoid a full, public review by the NRC.

I support the call by the Sierra Club for the NRC to dismiss requests by Southern California Edison to shortcut a full license review process for the failed San Onofre nuclear generators. The public deserves better.

Thank you for your attention to these concerns.

Dear Chairman MacFarlane,

Please do not permit the restart of the defective San Onofre nuclear reactor, Unit # 2. Please require a thorough license amendment process and hearing regarding San Onofre safety issues.

Thank you for your consideration.

Subject: We Call on the NRC To Not Approve Restart of San Onofre Unit

Apr 20, 2013

Chairperson Allison M. Macfarlane
11555 Rockville Pike
Rockville, MD 20852

Dear Chairperson Macfarlane,

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) has been seeking to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk. It is not clear whether this assessment comes only from NRC technical personnel or has Commission buy-in. Either way, the public has 30 days from April 10 to appeal the NRC's preliminary decision.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators. .

I support the call by the Sierra Club for the NRC to conduct a comprehensive and open review process prior to making any decision about a restart given the troubled history and current condition of the plant, let alone the level of public concern. The public deserves better.

Thank you for your attention to these concerns.

Please completely dismiss Edison's request. This latest maneuver by Edison appears to be merely a last-ditch, desperate attempt to avoid a full, public review by the NRC.

"No Significant Hazards" cannot be used in this case when we know it is a defective design. "No Significant Hazards" cannot be used when this design already failed and they still have not fixed the issues that caused it to fail. "No Significant Hazards" cannot be used because San Onofre has the worst employee safety complaint record of all Nuclear Power Plants in the US. It is very obvious to employees working at San Onofre, and people in the communities around San Onofre the plant is a significant hazard. If the NRC determines the otherwise, then we will know the bigger hazard is the NRC.

I support the call by the Sierra Club for the NRC to dismiss requests by Southern California Edison to shortcut a full license review process for the failed San Onofre nuclear generators. The public deserves better.

Thank you for your attention to these concerns.

I support the call by the Sierra Club for the NRC to dismiss requests by Southern California Edison to shortcut a full license review process for the failed San Onofre nuclear generators. The public deserves better.

Please respond to Rep. Markey & Sen. Boxer's letter to you.

"We are writing to request that you immediately confirm that the Nuclear Regulatory Commission (NRC) will take no action that could lead to any restart of San Onofre nuclear power plant before the commission completes its comprehensive investigation and provides a full opportunity for public participation."...

Is San Onofre prepared for a possible EMP? Earthquake? Tsunami?
Terrorist Attack? Do you have any studies that show the consequences and how you will deal with it? Do you have a current workable evacuation plan?

Please do not sidestep federal regulation and deny the public meaningful hearings with appropriate safety reports that address all of our concerns. Hopefully all meetings will be held in southern California...

At your April 3rd meeting (in Maryland) John Geesman (sp), who is a former board member ISO, a past member of the ca energy commission during davis/schwarzenegger's terms asked this question:

"Based on information edison has turned over for investigation being conducted by cpuc, even if both units 2, unit 3 were working perfectly, there were only 96 hours in 2012 when they would have been competitive with the market price for power in so. california. That's only 1% of the time. Why are we putting ourselves through so much regulatory pain and suffering for a plant that is not cost effective 99% of the time?"

<http://www.youtube.com/watch?v=GswNqQ82bW4&feature=youtu.be>

Is this restart being done simply so that Edison can continue charging customers?

There are far too many problems. Huge safety issues and questions, failure to address problems with citizen evacuation, failure to adequately address potential earthquake, tsunami, EMP, aircraft or other hazards that could result in a disaster and other problems. I would like to see your full nuclear disaster preparedness plan,

Please do the right thing. We do not need San Onofre! Please move on to clean, safe, sustainable energy.

We have ALL attended NRC Public Meetings where there was admission by the NRC and SCE that the steam generators' DESIGN FLAWS are well-documented! It is well-documented also about the FABRICATION CHANGES were made! Your own OVERSIGHT PANEL on 2/27 stated the inconsistencies of SCE's responses on especially REI #32 and many others.

With unknown consequences if re-started, we 8.4 million PEOPLE, ENVIRONMENT and the California ECONOMY become EXPERIMENTS by re-starting defective reactor and steam generators.

Congress has CALLED for your prudent actions in the name of SAFETY!!
We're praying that you will do the right thing!!

Thank you for your attention to these concerns.

Subject: We Call on the NRC to Dismiss Licensing Shortcuts for the Failed San Onofre Nuclear Units

Apr 17, 2013

Chairperson Allison M. Macfarlane
11555 Rockville Pike
Rockville, MD 20852

Dear Chairperson Macfarlane,

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to any restart of the San Onofre nuclear power plant before the Commission completes its comprehensive investigation and provides full opportunity for public participation.

Southern California Edison (SCE) is seeking to shortcut the license review process by urging the NRC to declare that a license amendment that would enable the restart of the San Onofre facility at 70% power involves no significant hazards. We believe that the public deserves a full and transparent review of the failed San Onofre generators before the NRC considers any potential restart.

In a word play, Edison claims it seeks a "license amendment" a phrase that properly refers only to the process provided by an Adjudicated License Amendment with sworn witnesses, evidentiary hearings and a judicial decision.

Speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate given the troubled history and current condition of the plant, let alone the level of public concern.

SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Please completely dismiss Edison's request. This latest maneuver by Edison appears to be merely a last-ditch, desperate attempt to avoid a full, public review by the NRC.

I support the call by the Sierra Club for the NRC to dismiss requests by Southern California Edison to shortcut a full license review process for the failed San Onofre nuclear generators. The public deserves better.

I am an evacuee from Japan after the Fukushima nuclear meltdowns. I am deeply concerned to see the same kind of reluctance to make the regulatory process transparent here as in Japan. The tsunami and earthquake may have triggered the accident in Fukushima, but it was human arrogance and folly that was the root cause.

If our processes here in the U.S. are truly to be the "gold standard" in nuclear regulation, then we need to be truly transparent and take our time to make the right decisions about this dangerous technology. With actions like the "no significant hazards" ruling, the NRC and SCE seem to be demonstrating to the public an unwillingness to follow the steps required in a rigorous, fully transparent review.

My child does not deserve to have to evacuate from yet another home because safety has been sacrificed on the altar of human arrogance and greed.

Please do the job that our taxpayer money pays you for: Serve the public good, not the whims of those who sit in the corporate boardroom.

Thank you,
Beverly Findlay-Kaneko
Huntington Beach, CA 92648

I support the call by the Sierra Club for the NRC to dismiss requests by Southern California Edison to shortcut a full license review process for the failed San Onofre nuclear generators. The public deserves better.

Can we not learn from history? SONGS has a terrible history record, by a fault line, has destroyed marine life and is on prime property for a tsunami. What do you (NRC) people not understand about the fact that human lives are more important than money..or ate your consciences just seared. May God help you if that is the case. DO NOT use us as an experiment. Do you really want to displace 8 million people and condemn their homes and have them live in desert tent cities- oh, that's right- they'll never make it to the desert because there is NO EVACUATION route...so they will be trapped like rats and see a future of cancer and homelessness.

Thank you for your attention to these concerns.

Dear Chairperson Macfarlane,

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to any restart of the San Onofre nuclear power plant before the Commission completes its comprehensive investigation and provides full opportunity for public participation.

Southern California Edison (SCE) is seeking to shortcut the license review process by urging the NRC to declare that a license amendment that would enable the restart of the San Onofre facility at 70% power involves no significant hazards. We believe that the public deserves a full and transparent review of the failed San Onofre generators before the NRC considers any potential restart.

We support Senator Barbara Boxer, Chairman of the Environment and Public Works Committee, who stated on April 10, 2013, "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature. It makes absolutely no sense to even consider taking any steps to reopen San Onofre until these investigations look at every aspect of reopening the plant given the failure of the tubes that carry radioactive water.

Speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate given the troubled history and current condition of the plant, let alone the level of public concern.

SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Please completely dismiss Edison's request. This latest maneuver by Edison appears to be merely a last-ditch, desperate attempt to avoid a full, public review by the NRC.

I support the call by the Sierra Club for the NRC to dismiss requests by Southern California Edison to shortcut a full license review process in order to restart one of the failed San Onofre nuclear generators.
The public deserves better.

Thank you for your attention to these concerns.
