Cc: Sheron, Brian; Borchardt, Bill; Brenner, Eliot; HOO Hoc; RST07 Hoc
Subject: RE: seismic question for today

Josh,

To follow up on my earlier email, please see the attached write up. It is very preliminary but at least it is something for the chairman to work with.

(b)(5) [REDACTED]

Also, you can refer to the Seismic Q&As and there is a one page high level overview of our seismic regs that Cliff wrote yesterday that may be of help. That is found on page 66.

Please feel free to call me with any questions or if I may be of further assistance. 415.307.6922.

(b)(5) [REDACTED]

Good luck with the preparations.

Cheers,
Annie

Subject: seismic question for today

BC/300

The Chairman keeps getting asked a question along the lines of 'how many of our plants are in/near seismically active areas.' Is there a specific numerical way to answer this i.e maybe like there are X number in high seismic areas or near faults etc.? Thank you Josh

Subject: Materials for March 21st Commission Briefing on Japan Event

Attached is the final scheduling note for the March 21st Commission briefing on the Japan Event. Staff slides should be emailed later today by Jim Andersen (OEDO).

Note that Commissioner Magwood goes first with questions.

BC/301

Below are a few meeting logistics for your information:

- Bill Borchardt will be the only NRC staff member at the table.
- The seats in the well are reserved for DEDOs / Office Directors
- The stadium seating to the Commissioners left will be reserved for designated technical staff (who may be called upon during the meeting) and Commission Office EAs/TAs
- The stadium seating to the Commissioners right will be reserved for Press Corps/OPA
- Some of the stadium seating in front of the Commissioners will be reserved for VIPs (Congressional Office staffers).
- The remaining stadium seats in front of the Commissioners will be open to the public.

Once the available public seats are filled, members of the public will be directed around the back of the building where they will enter the TWFN Auditorium to view the Commission meeting.

Thanks,
Rich

Briefing on NRC Response to Recent Nuclear Events in Japan

Bill Borchardt
Executive Director for Operations
March 21, 2011

Agenda

- **Event Overview**
- **Immediate NRC Response**
- **Continuing NRC Response**
- **Health Effects of Radiation**
- **Domestic Reactor Safety**
- **Path Forward**

Event Overview

- **Discussion of initiating event**
- **Current status of reactors**
- **Current status of spent fuel pools**

Immediate NRC Response

- **Activated Operations Center**
- **Dispatched NRC experts to Japan**
- **Areas of focus**
- **Extensive outreach to stakeholders**

Continuing NRC Response

- **Operations Center**
- **Support U.S. response**
- **Provide assistance**
- **Mobilize resources**

Health Effects of Radiation

- **Offsite Doses**
- **Radiological Consequences**

Domestic Reactor Safety

- **NRC oversight of U.S. plant safety**
- **Continuous improvement based on operating experience**

NRC Activities – Near Term

- **Inspection Activities**
- **Generic Communications**
- **Immediate regulatory actions**

NRC Activities – Longer Term

- **Lessons learned and recommendations**
- **Regulatory actions, for example, to identify potential:**
 - **Research projects**
 - **Generic issues**
 - **Regulatory enhancements**

Conclusion

USG HUMANITARIAN ASSISTANCE TO JAPAN FOR THE EARTHQUAKE AND TSUNAMI

USAID
FROM THE AMERICAN PEOPLE

**BUREAU FOR DEMOCRACY, CONFLICT, AND HUMANITARIAN ASSISTANCE (DCHA)
OFFICE OF U.S. FOREIGN DISASTER ASSISTANCE (OFDA)**

Japan – Earthquake and Tsunami

Fact Sheet #11, Fiscal Year (FY) 2011

March 21, 2011

Note: The last fact sheet was dated March 20, 2011.

KEY DEVELOPMENTS

- The earthquake and tsunami have resulted in more than 8,800 deaths and left nearly 13,000 people missing, as reported by the Government of Japan (GoJ) on March 21. The natural disasters also damaged or destroyed more than 127,000 buildings and 1,700 roads.
- On March 21, USAID/OFDA Director Mark Bartolini and the Disaster Assistance Response Team (DART) met with U.N. officials, the U.S. Ambassador to Japan, the Japan Platform (JPF)—an organization of Japanese NGO, private sector, and government partners—and other organizations regarding the humanitarian situation in Japan. A DART military liaison officer traveled to Sendai, Miyagi Prefecture, to enhance coordination with the U.S. Department of Defense (DoD) and an administrative officer arrived in Japan to support the DART. The DART currently comprises 22 members, including representatives from USAID, the U.S. Nuclear Regulatory Commission, and the U.S. Department of Energy (DoE).
- In response to a GoJ request, on March 21, 10,000 sets of USAID/OFDA-funded personal protective equipment (PPE)—including suits, masks, gloves, decontamination bags, and other supplies—arrived in Tokyo. DART members are currently working with DoD to transport the PPE.

NUMBERS AT A GLANCE¹		SOURCE
Confirmed Deaths	8,805	GoJ NPA ² – March 21, 2011
Missing Persons	12,664	GoJ NPA – March 21, 2011
Number of People in Evacuation Centers	319,121	GoJ NPA – March 21, 2011

FY 2011 HUMANITARIAN FUNDING PROVIDED TO JAPAN TO DATE

USAID/OFDA Assistance for the Japan Earthquake and Tsunami	\$7,117,254
DoD Humanitarian Assistance for the Japan Earthquake and Tsunami	\$16,100,000
Total USAID and DoD Assistance for the Japan Earthquake and Tsunami	\$23,217,254

CONTEXT

- On March 11 at 0046 hours Eastern Standard Time, or 1446 hours Japan Standard Time, a magnitude 9.0 earthquake occurred off the east coast of Honshu Island, Japan—approximately 231 miles northeast of Tokyo—at a depth of approximately 15 miles, generating a tsunami that struck the eastern coast of Japan and resulted in additional fatalities and damage, particularly in Miyagi, Fukushima, and Iwate prefectures. Furthermore, the natural disasters led to a serious nuclear incident at the Fukushima Daiichi power plant located approximately 150 miles north of Tokyo.
- On March 11, U.S. Ambassador John V. Roos declared a disaster due to the effects of the earthquake and tsunami in Japan. USAID/OFDA provided an initial \$100,000 through the U.S. Embassy in Tokyo to assist with local relief efforts. In addition, USAID activated a Response Management Team in Washington, D.C., and deployed a DART—including urban search and rescue (USAR) specialists and nuclear experts—to support Japanese emergency response efforts.

Humanitarian Situation and Response

- Inclement weather hindered helicopter transportation in affected areas on March 21, requiring ground transportation of supplies and limiting access for assessment missions.
- The number of individuals residing in evacuation centers continues to decrease as displaced households seek shelter with host families or return home as power is restored. On March 21, the GoJ NPA reported that approximately 319,000 people remained in shelters, a decrease of more than 31,000 people—9 percent of the population in shelters—since March 20.

¹ Figures remain preliminary and are expected to change.

² National Police Agency (NPA).

- Electrical supply continues to improve with power restored to approximately 230,000 people in recent days. Approximately 244,000 households remain without power, according to the U.N. Office for the Coordination of Humanitarian Affairs (OCHA). Approximately 2.4 million people remain without water in 11 prefectures, OCHA reported.
- Prefectural governments across Japan continue to announce plans to host individuals displaced from tsunami-affected areas or the GoJ's 20-kilometer exclusion zone in the vicinity of the Fukushima Daiichi power plant. According to OCHA, eight prefectural governments plan to host 152,000 people—approximately 48 percent of the evacuation centers' population—in hotels and public facilities. In addition, the GoJ also plans to build 30,000 transitional shelters for displaced individuals in the next two months, OCHA reported.
- Approximately 700 patients from six hospitals and 980 people in nursing homes have been evacuated from within the 20-30 km radius around Fukushima Daiichi nuclear power plant.

Logistics and Relief Supplies

- An oil refinery in Yokohama—one of Japan's largest—resumed operation on March 21, according to OCHA. The refinery has been closed since the earthquake but has the capacity to provide 270,000 barrels of oil per day, potentially improving access to fuel for transportation of relief supplies.
- As of March 20, the U.S. Seventh Fleet had provided transportation for 126 tons of emergency relief supplies to support the humanitarian response.

Situation at Nuclear Power Plants

- Although cooling systems are not yet functional, engineers have restored electricity to three reactors at the Fukushima Daiichi nuclear power plant, according to OCHA.
- DoE, DART, and U.S. Embassy staff continue to actively monitor and triangulate information on radiation levels in Tokyo. To date, U.S. agencies continue to report that there have not been any increases in radiation levels in Tokyo. DART nuclear specialists also note no significant changes in the situation at the Fukushima Daiichi power plant in recent days.

USAID AND DOD HUMANITARIAN ASSISTANCE TO JAPAN

<i>Implementing Partner</i>	<i>Activity</i>	<i>Location</i>	<i>Amount</i>
USAID/OFDA ASSISTANCE			
U.S. Embassy in Tokyo	Emergency Relief Support	Affected Areas	\$100,000
DoD	USAR Operations (Transport of USAR cargo)	Affected Areas	\$1,000,000
L.A. County USAR Team	USAR Operations	Affected Areas	\$2,058,000
Fairfax County USAR Team	USAR Operations	Affected Areas	\$2,058,000
	USAID/DART Support Costs		\$1,599,600
	Administrative Support		\$301,654
TOTAL USAID/OFDA			\$7,117,254
DOD ASSISTANCE			
	Emergency Relief Support	Affected Areas	\$16,100,000
TOTAL DOD			\$16,100,000
TOTAL U.S. HUMANITARIAN ASSISTANCE TO JAPAN IN FY 2011			\$23,217,254

¹ USAID/OFDA funding represents anticipated or actual obligated amounts as of March 21, 2011. Amounts are subject to change.

² Estimated expenditure as of March 21, 2011.

PUBLIC DONATION INFORMATION

- The most effective way people can assist relief efforts is by making cash contributions to humanitarian organizations that are conducting relief operations. A list of humanitarian organizations that are accepting cash donations for earthquake and tsunami response efforts in Japan can be found at www.usaid.gov/japanquake or www.interaction.org.
- USAID encourages cash donations because they allow aid professionals to procure the exact items needed (often in the affected region); reduce the burden on scarce resources (such as transportation routes, staff time, warehouse space, etc.); can be transferred very quickly and without transportation costs; support the economy of the disaster-stricken region; and ensure culturally, dietary, and environmentally appropriate assistance.
- More information can be found at:
 - The Center for International Disaster Information: www.cidi.org or (703) 276-1914
 - Information on relief activities of the humanitarian community can be found at www.reliefweb.int

From: McNamara, Nancy
Sent: Tuesday, March 22, 2011 4:40 PM
To: LIA04 Hoc; OST05 Hoc
Subject: Request from MA for RI to Meet w/Governor
Importance: High

This afternoon, the Governor of Massachusetts has requested a meeting with him and his staff and the NRC to discuss the event in Japan, seismic study (GI-199) and spent fuel pools. The Governor stated that the level of participation could be at the Regional level with experts to support the information sharing session.

The RI Regional Administrator is available to support such a meeting with assistance from subject matter experts from our HQ staff.

Would you like us to coordinate this request through the EDO's office or through the Liaison Team?

Nancy

March 22, 2011

The Honorable Gregory Jaczko
Chairman
U. S. Nuclear Regulatory Commission
Washington, DC 20555-0001

Dear Chairman Jaczko:

Last week, President Obama called for the Nuclear Regulatory Commission to conduct a prompt and thorough investigation of all nuclear facilities in the United States. As the NRC makes plans for both its short-term and long-term evaluations of the safety of our nation's nuclear power plants, I want to emphasize the importance of transparency and openness throughout the review process.

As you know, there is a high level of interest in the safety and security of the nation's nuclear plants, and it is important for the NRC to promptly share information with the American public that you gather in the immediate future, as well as over the long-term.

In May of 2010, you testified before the Senate Committee on Environment and Public Works' Subcommittee on Clean Air and Nuclear Safety. In that testimony you stated that "Greater openness and transparency will only build public confidence in the agency by highlighting the agency's strengths: the experience, expertise, and dedication of the NRC staff, as well as the vitality of the Commission."

I could not agree more. In order for the NRC to maintain credibility with the American people, I encourage you to work with all members of the Commission to ensure that information gathered during your reviews of the nation's nuclear facilities is made available to the public, and that the reviews are conducted with complete openness and transparency.

Thank you for your attention to this matter.

Sincerely,

Barbara Boxer
Chairman

**Honeywell Pleads Guilty in Illinois to Illegal Storage of Hazardous Waste
Corporation Sentenced to Pay \$11.8 Million Criminal Fine**

BC/313

WASHINGTON – Honeywell International Inc. pleaded guilty today in federal district court in Benton, Ill., to one felony offense for knowingly storing hazardous waste without a permit in violation of the Resource Conservation and Recovery Act (RCRA). Honeywell was also sentenced today to pay a criminal fine in the amount of \$11.8 million.

"Today, Honeywell must account for its knowing violation of a federal law that protects the public from exposure to hazardous waste containing radioactive material," said Ignacia S. Moreno, Assistant Attorney General for the Environment and Natural Resources Division of the Department of Justice. "All companies who generate hazardous waste must have a permit to store the waste and, when granted a permit under RCRA, must fully comply with its requirements or they will be prosecuted."

"The citizens of Southern Illinois should not and will not tolerate improper storage of hazardous wastes so near their homes and businesses," said Stephen R. Wigginton, U.S. Attorney for the Southern District of Illinois. U.S. Attorney Wigginton noted that he will "continue to seek out and prosecute environmental criminals on behalf of the residents of the Southern District of Illinois in order to insure the environmental safety of our communities."

"The defendant's illegal storage practices put employees at risk of exposure to radioactive and hazardous materials," said Cynthia Giles, assistant administrator for EPA's Office of Enforcement and Compliance Assurance. "Today's plea agreement and sentencing shows that those who try to circumvent the law and place people's health and the environment at risk will be vigorously prosecuted."

Honeywell, a Delaware corporation with corporate headquarters in Morristown, N.J., owns and operates a uranium hexafluoride (UF₆) conversion facility in Massac County, Ill., near the city of Metropolis and the Ohio River. Honeywell is licensed by the U.S. Nuclear Regulatory Commission to possess and otherwise manage natural uranium, which it converts into UF₆ for nuclear fuel. The Metropolis facility is the only facility in the United States to convert natural uranium into UF₆.

At the Metropolis facility, air emissions from the UF₆ conversion process are scrubbed with potassium hydroxide (KOH) prior to discharge. As a result of this process, KOH scrubbers and associated equipment accumulate uranium compounds that settle out of the liquid and are pumped as a slurry into 55-gallon drums. The drummed material, called "KOH mud" and consisting of uranium and KOH, has a pH greater than or equal to 12.5.

In November 2002, Honeywell shut down part of the wet reclamation process it used to reclaim the uranium from the KOH mud, knowing that previously accumulated drums of KOH mud and any additional drums of KOH mud generated thereafter would have to be stored onsite until such time as the wet reclamation process was restarted. Honeywell also knew that, because the pH of KOH mud generated at the facility was greater than or equal to 12.5, it is classified as corrosive hazardous waste under regulations issued pursuant to RCRA. Therefore, Honeywell needed, but did not have, a RCRA permit to store any drums of KOH mud at its facility longer than 90 days.

In July 2007, Honeywell requested a modification of its RCRA permit from the Illinois Environmental Protection Agency (IEPA) so that they could store drums of KOH mud. IEPA issued Honeywell a modified permit in July 2008, allowing Honeywell to store drums containing KOH mud only in a KOH container storage area designed to contain any spills, leaks or precipitation that accumulates in the drum storage area. By September 2008, Honeywell had accumulated over 7,000 drums of KOH mud. In April 2009, EPA special agents conducted a search warrant and found nearly 7,500 illegally stored drums containing waste that was both radioactive and hazardous. Honeywell began storing the KOH mud drums in compliance with the terms of its RCRA permit in approximately March 2010.

In accordance with the terms of the criminal plea agreement, Honeywell will serve a five-year term of probation. As a condition of probation, Honeywell must comply with the terms of the interim consent order entered into with the Illinois Attorney General's Office and the Illinois Environmental Protection Agency, filed on April 21, 2010, and any subsequent revisions, which imposes a schedule for the processing of KOH mud. As a further condition of probation, Honeywell must implement a community service project in the community surrounding the Metropolis facility, whereby Honeywell will develop, fund and implement a household hazardous waste collection program and arrange for proper

treatment, transportation and disposal of this waste collected during at least eight collection events over a two-year period, at a cost of approximately \$200,000.

The case was investigated by the Environmental Protection Agency Criminal Investigation Division. It was prosecuted by Jennifer A. Whitfield and Susan L. Park of the Environmental Crimes Section of the Department of Justice Environment and Natural Resources Division and by William E. Coonan and Michael J. Quinley of the U.S. Attorney's Office for the Southern District of Illinois.

Subject: Rep. Kucinich/Callaway

As a break from the Japanes issues, Kucinich's staffer sent an email seeking various correspondence and communications regarding Larry Criscione's newest FOIA/inquiry on the 2003 Callaway incident. I spoke with Mary Jean in the FOIA office and she considers the request broader in scope and would like to treat it as its own FOIA. Marty Gelfand (Kucinich's staffer) is fine with it being a FOIA but prefers not to take the "extra bureaucratic" step of sending it to FOIA. Can we submit it for him? I don't remember how this was done in Gene's case.

Grant Hill's Response to Jalen Rose

By GRANT HILL

Associated Press Grant Hill currently plays for the Phoenix Suns.

"The Fab Five," an ESPN film about the Michigan basketball careers of Jalen Rose, Juwan Howard, Chris Webber, Jimmy King and Ray Jackson from 1991 to 1993, was broadcast for the first time Sunday night. In the show, Rose, the show's executive producer, stated that Duke recruited only black players he considered to be "Uncle Toms." Grant Hill, a player on the Duke team that beat Michigan in the 1992 Final Four, reflected on Rose's comments.

I am a fan, friend and longtime competitor of the Fab Five. I have competed against Jalen Rose and Chris Webber since the age of 13. At Michigan, the Fab Five represented a cultural phenomenon that impacted the country in a permanent and positive way. The very idea of the Fab Five elicited pride and promise in much the same way the Georgetown teams did in the mid-1980s when I was in high school and idolized them. Their journey from youthful icons to successful men today is a road map for so many young, black men (and women) who saw their journey through the powerful documentary, "The Fab Five."

It was a sad and somewhat pathetic turn of events, therefore, to see friends narrating this interesting documentary about their moment in time and calling me a bitch and worse, calling all black players at Duke "Uncle Toms" and, to some degree, disparaging my parents for their education, work ethic and commitment to each other and to me. I should have guessed there was something regrettable in the documentary when I received a Twitter apology from Jalen before its premiere. I am aware Jalen has gone to some length to explain his remarks about my family in numerous interviews, so I believe he has some admiration for them.

In his garbled but sweeping comment that Duke recruits only "black players that were 'Uncle Toms,'" Jalen seems to change the usual meaning of those very vitriolic words into his own meaning, i.e., blacks from two-parent, middle-class families. He leaves us all guessing exactly what he believes today.

I am beyond fortunate to have two parents who are still working well into their 60s. They received great educations and use them every day. My parents taught me a personal ethic I try to live by and pass on to my children.

I come from a strong legacy of black Americans. My namesake, Henry Hill, my father's father, was a day laborer in Baltimore. He could not read or write until he was taught to do so by my grandmother. His first

BC/326

present to my dad was a set of encyclopedias, which I now have. He wanted his only child, my father, to have a good education, so he made numerous sacrifices to see that he got an education, including attending Yale.

This is part of our great tradition as black Americans. We aspire for the best or better for our children and work hard to make that happen for them. Jalen's mother is part of our great black tradition and made the same sacrifices for him.

My teammates at Duke — all of them, black and white — were a band of brothers who came together to play at the highest level for the best coach in basketball. I know most of the black players who preceded and followed me at Duke. They all contribute to our tradition of excellence on the court.

It is insulting and ignorant to suggest that men like Johnny Dawkins (coach at Stanford), Tommy Amaker (coach at Harvard), Billy King (general manager of the Nets), Tony Lang (coach of the Mitsubishi Diamond Dolphins in Japan), Thomas Hill (small-business owner in Texas), Jeff Capel (former coach at Oklahoma and Virginia Commonwealth), Kenny Blakeney (assistant coach at Harvard), Jay Williams (ESPN analyst), Shane Battier (Memphis Grizzlies) and Chris Duhon (Orlando Magic) ever sold out their race.

To hint that those who grew up in a household with a mother and father are somehow less black than those who did not is beyond ridiculous. All of us are extremely proud of the current Duke team, especially Nolan Smith. He was raised by his mother, plays in memory of his late father and carries himself with the pride and confidence that they instilled in him.

The sacrifice, the effort, the education and the friendships I experienced in my four years are cherished. The many Duke graduates I have met around the world are also my "family," and they are a special group of people. A good education is a privilege.

Just as Jalen has founded a charter school in Michigan, we are expected to use our education to help others, to improve life for those who need our assistance and to use the excellent education we have received to better the world.

A highlight of my time at Duke was getting to know the great John Hope Franklin, James B. Duke Professor of History and the leading scholar of the last century on the total history of African-Americans in this country. His insights and perspectives contributed significantly to my overall development and helped me understand myself, my forefathers and my place in the world.

Ad ingenium faciendum, toward the building of character, is a phrase I recently heard. To me, it is the essence of an educational experience. Struggling, succeeding, trying again and having fun within a nurturing but competitive environment built character in all of us, including every black graduate of Duke.

My mother always says, "You can live without Chaucer and you can live without calculus, but you cannot make it in the wide, wide world without common sense." As we get older, we understand the importance of these words. Adulthood is nothing but a series of choices: you can say yes or no, but you cannot avoid saying one or the other. In the end, those who are successful are those who adjust and adapt to the decisions they have made and make the best of them.

I caution my fabulous five friends to avoid stereotyping me and others they do not know in much the same way so many people stereotyped them back then for their appearance and swagger. I wish for you the restoration of the bond that made you friends, brothers and icons.

I am proud of my family. I am proud of my Duke championships and all my Duke teammates. And, I am proud I never lost a game against the Fab Five.

Grant Henry Hill
Phoenix Suns

Aside from Matt and Doug (and maybe John?), according to this list, looks like a different crew of congressional staff. Are we aware of an a.m. visit to Diablo? I'm not and haven't notified RIV.

Thanks!

Jenny,

I just spoke to PG&E, and they told me that Senator Feinstein, et al will be going to Diablo Canyon on the morning of the 22nd, and then to SONGS in the afternoon. Is this consistent with what you've heard? The last word I got was that they were only going to SONGS.

Thank you for your help,

Geoff Miller

Geoff

Here is an update of our visitor's guest list for Tuesday, March 22. Can you supply personal info for Mr Apostolakis to set up access? Mr Collins is already active in our system.

PRINCIPLES ATTENDING

1. Dianne Feinstein, United States Senate
2. Lois Capps, Member of Congress
3. George Apostolakis, NRC Commissioner
4. Elmo Collins Jr., NRC Regional Administrator
5. Tom Brocher, USGS Director of Earthquake Science Center

STAFF ATTENDING

1. John Christopher Thompson, Chief of Staff Senator Feinstein
2. Douglas Calhoun Clapp, Feinstein Staff Member
3. Matthew Benjamin Nelson, Feinstein Staff Member
4. Jim Molinari, Feinstein State Director
5. Sarah Moffat, Feinstein Staff Member
6. Shelly H. Abajian, Feinstein Director Central California
7. Chief of Staff, Congresswoman Lois Capps

Subject: FW: Media Heads Up--U.S. Sen. Lindsey Graham to hold press briefing at Oconee March 22

Andy, please let me know if you have any questions.

Oconee will be hosting Sen. Lindsey Graham for a plant tour and short press briefing next Tuesday, March 22. Today, the Senator's director of communications is personally calling and inviting a limited number of local broadcast and print media as well as FOX News Channel, BBC World News (they had previously asked for a tour of Oconee) and CNN. The press will be joining the Senator on a plant tour and for security reasons we are restricting the participant list to a manageable number. Additional media will be able to join in for the press briefing at the World of Energy after the tour if they desire. I expect we will be at capacity in our lobby for this event.

BC | 329

The Senator wishes to convey his support and confidence in the nuclear power industry. He is a Pickens County native and Oconee is happy to host him.

Agenda

Noon –Media arrive at World of Energy. Begin staggered departure to plant for security processing.

12:45 – Sen. Graham and staff arrive at World of Energy process inside security area

1 p.m. –Begin plant tour.

1:40 – Return to World of Energy for press briefing with Senator Graham and Oconee Vice President Preston Gillespie

2 p.m. – Adjourn

Japan – Earthquake and Tsunami

Fact Sheet #10, Fiscal Year (FY) 2011

March 20, 2011

Note: The last fact sheet was dated March 19, 2011.

KEY DEVELOPMENTS

- The earthquake and tsunami have resulted in nearly 8,500 deaths and left nearly 13,000 people missing, as reported by the Government of Japan (GoJ) on March 20. The natural disasters also damaged or destroyed more than 126,000 buildings and 1,400 roads.
- On March 20, USAID/OFDA Director Mark Bartolini arrived in Tokyo for a three-day visit to meet with staff from the U.S. Embassy, U.S. Department of Defense (DoD), U.N. agencies, and non-governmental organizations, as well as travel to tsunami-affected areas with the Disaster Assistance Response Team (DART). In addition, a third DART military liaison officer arrived in Tokyo to work with DoD in defining humanitarian requirements and validating humanitarian operations. The DART currently comprises 20 members, including representatives from USAID, the U.S. Department of Health and Human Services, the U.S. Nuclear Regulatory Commission, and the U.S. Department of Energy (DoE).
- In response to a GoJ request, USAID/OFDA has dispatched 10,000 sets of personal protective equipment (PPE)—including suits, masks, gloves, decontamination bags, and other supplies—to Yokota, Japan, from the USAID/OFDA chemical, biological, radiological, nuclear, and radiological warehouse at Dobbins Air Reserve Base in Georgia. The PPE sets are scheduled to arrive on March 21 local time for consignment to the GoJ.
- Japan Self-Defense Force (JSDF) and other GoJ personnel had transported nearly all of 23,000 previously isolated individuals to evacuation centers as of March 19, according to the U.N. Office for the Coordination of Humanitarian Affairs (OCHA). GoJ officials reported that only 20 people remained isolated due to damaged roads and communications in Miyagi and Fukushima prefectures.

NUMBERS AT A GLANCE ¹		SOURCE
Confirmed Deaths	8,450	GoJ NPA ² – March 20, 2011
Missing Persons	12,931	GoJ NPA – March 20, 2011
Number of People in Evacuation Centers	350,332	GoJ NPA – March 20, 2011

FY 2011 HUMANITARIAN FUNDING PROVIDED TO JAPAN TO DATE

USAID/OFDA Assistance for the Japan Earthquake and Tsunami.....	\$7,210,614
DoD Humanitarian Assistance for the Japan Earthquake and Tsunami.....	\$16,100,000
Total USAID and DoD Assistance for the Japan Earthquake and Tsunami	\$23,310,614

CONTEXT

- On March 11 at 0046 hours Eastern Standard Time, or 1446 hours Japan Standard Time, a magnitude 9.0 earthquake occurred off the east coast of Honshu Island, Japan—approximately 231 miles northeast of Tokyo—at a depth of approximately 15 miles, generating a tsunami that struck the eastern coast of Japan and resulted in additional fatalities and damage, particularly in Miyagi, Fukushima, and Iwate prefectures. Furthermore, the natural disasters led to a serious nuclear incident at the Fukushima Daiichi power plant located approximately 150 miles north of Tokyo.
- On March 11, U.S. Ambassador John V. Roos declared a disaster due to the effects of the earthquake and tsunami in Japan. USAID/OFDA provided an initial \$100,000 through the U.S. Embassy in Tokyo to assist with local relief efforts. In addition, USAID activated a Response Management Team (RMT) in Washington, D.C., and deployed a DART—including urban search and rescue (USAR) specialists and nuclear experts—to support Japanese emergency response efforts.

Humanitarian Situation and Response

- The GoJ is progressively opening damaged roads, and the JSDF plans to reach all remaining isolated populations in the coming days. Approximately 120,000 national emergency service personnel are currently working in the

¹ Figures remain preliminary and are expected to change.
² National Police Agency (NPA).

most affected areas of Japan, repairing infrastructure and distributing a significant amount of food, water, blankets, and other supplies to individuals in evacuation centers.

- The number of individuals residing in evacuation centers is decreasing as road repairs enable displaced individuals to travel to relatives' and friends' houses in unaffected areas or return to their houses as electricity is restored, according to OCHA. On March 20, OCHA reported that the number of people living in evacuation centers had decreased by more than 15,700 people—or 5 percent—since March 18.
- As of March 20, more than 21,000 residents of affected areas had relocated to other parts of Japan, according to OCHA. The GoJ Ministry of Land, Infrastructure, Transport, and Tourism has requested Japan's housing industry build 30,000 transitional shelters—including two rooms, a kitchen, toilet, and washroom—in the next two months and has deployed specialist teams to the affected areas to select suitable locations for shelter placement. Construction has begun in Iwate Prefecture, where workers had completed approximately 200 shelters as of March 20, according to OCHA. In addition, all of Japan's prefectures are making plans to provide more sustainable housing for the displaced population in evacuation centers.

Logistics and Relief Supplies

- DART staff note that limited supply of fuel for relief supply transport continues to represent the most significant challenge to the earthquake and tsunami response effort to date. To ease shortages in affected areas, the GoJ has delivered approximately 600,000 liters of fuel per day for the past two days. As of March 20, the GoJ had delivered a total of 4.3 million liters of fuel to affected prefectures and is using 280 tanker vehicles for gasoline transport, OCHA reported.
- As of March 19, approximately 17,000 U.S. Military personnel, 100 aircraft, and 14 ships were assisting or prepared to support relief operations in Japan, including by providing transportation of relief commodities.

Situation at Nuclear Power Plants

- The GoJ has detected radiation levels in milk from a farm in Fukushima above the limit set by a national food safety law. Officials also reported radiation levels over food safety limits in seven samples of spinach from Ibaraki Prefecture. According to the GoJ Chief Cabinet Secretary, the radiation levels are not expected to pose any immediate health hazards, and the GoJ is monitoring other food products.
- DoE, DART, and U.S. Embassy staff also actively continue to monitor and triangulate information on radiation levels in Tokyo. Despite recent media reports to the contrary, all three U.S. agencies continue to report no increases in radiation levels in Tokyo at this time.

USAID AND DOD HUMANITARIAN ASSISTANCE TO JAPAN

<i>Implementing Partner</i>	<i>Activity</i>	<i>Location</i>	<i>Amount</i>

¹ USAID/OFDA funding represents anticipated or actual obligated amounts as of March 20, 2011.

PUBLIC DONATION INFORMATION

- The most effective way people can assist relief efforts is by making cash contributions to humanitarian organizations that are conducting relief operations. A list of humanitarian organizations that are accepting cash donations for earthquake and tsunami response efforts in Japan can be found at www.usaid.gov/japanquake or www.interaction.org.
- USAID encourages cash donations because they allow aid professionals to procure the exact items needed (often in the affected region); reduce the burden on scarce resources (such as transportation routes, staff time, warehouse space, etc.); can be transferred very quickly and without transportation costs; support the economy of the disaster-stricken region; and ensure culturally, dietary, and environmentally appropriate assistance.
- More information can be found at:
 - The Center for International Disaster Information: www.cidi.org or (703) 276-1914
 - Information on relief activities of the humanitarian community can be found at www.reliefweb.int

Japan – Earthquake and Tsunami

Fact Sheet #12, Fiscal Year (FY) 2011

March 22, 2011

Note: The last fact sheet was dated March 21, 2011.

KEY DEVELOPMENTS

- The earthquake and tsunami have resulted in nearly 9,200 deaths and left nearly 13,800 people missing, as reported by the Government of Japan (GoJ) on March 22. The natural disasters also damaged or destroyed more than 128,000 buildings and 1,700 roads.
- Technicians and engineers have been repairing communications, transportation, and basic service infrastructure, allowing increased numbers of displaced persons to return home or travel to central evacuation centers.
- A magnitude 6.6 aftershock struck off the coast of eastern Honshu Island at a depth of 16.5 miles at approximately 1700 hours local time on March 22. According to the U.S. Geological Survey (USGS), the epicenter was located approximately 170 miles east of Iwaki City, Fukushima Prefecture, and 182 miles east-southeast of Sendai, Miyahi Prefecture. USGS reports that nearby towns on Honshu Island experienced Level III shaking on the Modified Mercalli Intensity Scale, indicating that the earthquake was not likely to result in any damage to structures.

FY 2011 HUMANITARIAN FUNDING PROVIDED TO JAPAN TO DATE

USAID/OFDA Assistance for the Japan Earthquake and Tsunami..... \$7,135,894
 DoD³ Humanitarian Assistance for the Japan Earthquake and Tsunami \$20,900,000
Total USAID and DoD Assistance for the Japan Earthquake and Tsunami \$28,035,894

CONTEXT

- On March 11 at 0046 hours Eastern Standard Time, or 1446 hours Japan Standard Time, a magnitude 9.0 earthquake occurred off the east coast of Honshu Island—approximately 231 miles northeast of Tokyo—at a depth of approximately 15 miles, generating a tsunami that struck the eastern coast of Japan and resulted in additional fatalities and damage, particularly in Miyagi, Fukushima, and Iwate prefectures. Furthermore, the natural disasters led to a serious nuclear incident at the Fukushima Daiichi power plant located approximately 150 miles north of Tokyo.
- USAID immediately activated a Response Management Team in Washington, D.C., and deployed a Disaster Assistance Response Team (DART)—including urban search and rescue (USAR) specialists and nuclear experts—to support Japanese emergency response efforts. On March 11, U.S. Ambassador John V. Roos declared a disaster due to the effects of the earthquake and tsunami in Japan.

Humanitarian Situation and Response

- The newly created GoJ Special Headquarters—designed to assist disaster-affected individuals—began operations on March 20. The headquarters is relocating displaced individuals to unaffected prefectures and working to minimize the burden on local governments in the host prefectures. According to the GoJ Chief Cabinet Secretary, the special headquarters will meet regularly to ensure that displaced individuals receive adequate support. On March 22, the GoJ reported that approximately 264,000 people remained in shelters, representing a decrease of more than 55,000 people—17 percent of the population in shelters—since March 21.
- The number of evacuation centers hosting displaced persons has also decreased as road clearance has enabled displaced persons to congregate in larger evacuation centers that are easier to reach with humanitarian assistance.

¹ Figures remain preliminary and are expected to change.

² National Police Agency (NPA)

³ U.S. Department of Defense (DoD)

- Electrical supply continues to improve with power restored to approximately 27,000 households since March 21, according to the U.N. Office for the Coordination of Humanitarian Affairs (OCHA). As of March 22, approximately 217,000 households remained without power.
- Technicians have restored more than 90 percent of earthquake- and tsunami-damaged telecommunications and 90 percent of damaged roads are now accessible to the public, according to OCHA.

Logistics and Relief Supplies

- On March 22, the second shipment of equipment for a DoD-funded high-flow pump system arrived in Japan via two Australian military flights. The equipment will be assembled and transferred to the Fukushima Daiichi power plant to augment cooling capacity at the facility. The initial shipment of equipment for the pump system arrived in Japan on March 21.
- In response to a GoJ request, 10,000 sets of USAID/OFDA-funded personal protective equipment—including suits, masks, gloves, decontamination bags, and other supplies—have arrived at Yokota Air Force Base, near Tokyo. The equipment is en route to individuals working near the nuclear exclusion zone around Fukushima Daiichi nuclear power plant.
- On March 22, DoD delivered 635 daily servings of drinking water and 32,720 daily servings of food to benefit more than 5,500 displaced individuals. At present, 17 ships and an estimated 17,000 personnel are involved in or prepared to assist with humanitarian efforts in Japan.

Situation at Nuclear Power Plants

- According to the U.N. World Health Organization (WHO), tests have found limited radioactive contamination of drinking water and certain foods grown in the vicinity of the Daiichi nuclear power plant. As a precautionary measure, the GoJ has suspended shipments of milk from Fukushima Prefecture and leafy vegetables from Ibaraki, Tochigi, Gunma, and Fukushima prefectures, as well as recommended that individuals living near the Fukushima Daiichi facility avoid drinking tap water. However, the GoJ reported that consuming contaminated food or water would not pose a health risk, and WHO reported no evidence that contaminated food has reached other countries.
- U.S. Department of Energy, DART, U.S. Nuclear Regulatory Commission, and U.S. Embassy staff continue to actively monitor and triangulate information on radiation levels in Tokyo. To date, U.S. agencies continue to report that there have not been any increases in radiation levels in Tokyo. DART nuclear specialists also note no significant changes in the situation at the Fukushima Daiichi power plant in recent days.

USAID AND DOD HUMANITARIAN ASSISTANCE TO JAPAN

Implementing Partner	Activity	Location	Amount
USAID/OFDA ASSISTANCE			
U.S. Embassy in Tokyo	Emergency Relief Support	Affected Areas	\$100,000
DoD	USAR Operations (Transport of USAR cargo)	Affected Areas	\$1,000,000
L.A. County USAR Team	USAR Operations	Affected Areas	\$2,058,000
Fairfax County USAR Team	USAR Operations	Affected Areas	\$2,058,000
	USAID/DART Support Costs		\$1,618,240
	Administrative Support		\$301,654
TOTAL USAID/OFDA			\$7,135,894
DOD ASSISTANCE			
	Emergency Relief Support	Affected Areas	\$20,900,000
TOTAL DOD			\$20,900,000
TOTAL U.S. HUMANITARIAN ASSISTANCE TO JAPAN¹ - 2011			\$28,035,894

¹ USAID/OFDA funding represents anticipated or actual obligated amounts as of March 22, 2011. Amounts are subject to change.

² Estimated expenditure as of March 22, 2011.

PUBLIC DONATION INFORMATION

- The most effective way people can assist relief efforts is by making cash contributions to humanitarian organizations that are conducting relief operations. A list of humanitarian organizations that are accepting cash donations for earthquake and tsunami response efforts in Japan can be found at www.usaid.gov/japanquake or www.interaction.org.
- USAID encourages cash donations because they allow aid professionals to procure the exact items needed (often in the affected region); reduce the burden on scarce resources (such as transportation routes, staff time, warehouse space, etc.); can be transferred very quickly and without transportation costs; support the economy of the disaster-stricken region; and ensure culturally, dietary, and environmentally appropriate assistance.
- More information can be found at:
 - The Center for International Disaster Information: www.cidi.org or (703) 276-1914
 - Information on relief activities of the humanitarian community can be found at www.reliefweb.int

Subject: FW: Seismic Q&As March 22th 10pm update
Attachments: Diablo Canyon Q&As.pdf; SONGS Q&As.pdf; Seismic Questions for Incident Response 3-22-11 10 pm.pdf

The latest. FYI, there is stuff in the Diablo and SONGS material that says Diablo would survive a similar shaking and appears to say the same about SONGS. However, I would double-check that with the geology folks to be on the absolute safe side before putting out to the delegation.

Subject: Seismic Q&As March 22th 10pm update

All,

Attached please find an updated set of Q&As. I also included some new Q&As for SONGS and Diablo Canyon, just in case anyone is interested.

This version has an expanded set of definitions and new sections on station blackout, spent fuel, flooding and some other topics. It also has fewer duplicate questions.

Let me also pass on a tidbit of info. According to TEPCO (via an NEI press release), the tsunami at Fukushima was 14 meters and the design tsunami level was 5.7 meters. The reactors and backup power sources were at 10 meters and at 13 meters. Ouch.

Cheers,
Annie

Subject: Seismic Q&As March 20th 8pm update

All,

Here's today's version. It includes updates on related topics for tomorrow's briefing. Also, some of the sections have been streamlined and some (though not all) of the answers have been updated.

The biggest news from the seismic team's perspective is that starting tomorrow a very bright young risk analyst (Michelle Bensi) who recently joined us from UC Berkeley (my beloved alma mater) will be helping with the compilation of this document. That will allow our team to spend more time cleaning and streamlining it; which inevitably will make it more user friendly...and shorter! Starting with tomorrow's version her name will start to show up on the front.

Best of luck to everyone with the briefing tomorrow!

Annie

Subject: Seismic Q&As March 19th 8am update

All,

Here is today's updated version. Lot of new fact sheets have been prepared for various briefings and for Monday's public meeting!

However, the big news of the day is that we just sent off a 6 page, 22 question, much better edited version for a public Q&A set. It's all in OPA's capable hands now. I think it's pretty good...but then I'm biased.

Cheers,

Annie

Subject: RE: Seismic Q&As March 18th 5am update

All,

Please see the updated version of the Seismic Q&As.

Among today's highlights:

*We added a Terms and Definitions section at the end of the document. (We know that an acronyms list would be helpful too, but it will have to wait a little) *The "additional information" section has been split into tables, plots, and fact sheets *A high-level draft fact sheet on NRC's seismic regulations has been added *We added a section to track outstanding questions that have come in from congress. This will support those who get the tickets in the short terms (most likely NRR). The questions will be moved to the appropriate sections long term (as long as they are not duplicates.)

I'm sure we all agree this has been a crazy week!. We're hoping that the weekend workload is lighter (if only because we won't get as many email from in house) and we can clean up this document and fill in some of the missing answers in preparation for the news story changing. We're trying hard to get out in front of the next wave.

Cheers,
Annie

Subject: Seismic Q&As March 17th 2am update All,

As promised, a sharepoint site has been set up where our friends in NRR will be posting the latest version of the Seismic Q&A document on an ongoing basis. If someone would prefer to use the sharepoint site, instead of being on this distribution list, please let me know...

<http://portal.nrc.gov/edo/nrr/NRR%20TA/FAQ%20Related%20to%20Events%20Occuring%20in%20Japan/Forms/AllItems.aspx>

This latest update has a number of new questions (not many with answers today, but we are working hard). A high priority question we are working on is "how many plants are near a mapped active fault". We're focusing on anything within 50 miles. We're also pulling relevant questions from the congressional inquiries we just received; and will also give these high priority to support any needs by NRR.

Many new figures and some draft fact sheets have added to the "additional information" section. These include the NRO half of a tsunami fact sheet...a description of the tsunami research is still to come from RES.

Some good news: Yesterday's version seems to have been widely forwarded around the agency. So, we are also starting to get some excellent questions from staff looking forward. This is allowing us to feel that we are finally getting out in front of things to a small degree. Also, our team has grown and we now have someone acting as source of seismic expertise for the 11pm to 7 am shift. This means that we now have seismic experts available to the RST and OPA at the Op Center 24 hours, with 2 people during the day. That extra support is allowing us to get this out at least an hour earlier today ☺

We are continuing to compile the questions that come in and update the seismic Q&A document. If you have suggested changes, or want to provide missing answers, please forward them to me for compilation.

This is a living document and will be updated daily in the foreseeable future.

Happy St. Paddy's Day. May the world (especially our friends in Japan) have the luck of the Irish today.

Cheers,
Annie

Subject: latest version of Q&As

All,

This is the first draft of the seismic-specific Q&As. It is pretty rough and there are many answers still missing, but people have contributed a lot and we thought it may be useful for many people trying to answer questions coming in.

We are continuing to compile the questions that come in and update the seismic Q&A document. If you have suggested changes, or want to provide missing answers, please forward them to me for compilation.

This is a living document and will be updated daily in the foreseeable future.

Annie

Japan – Earthquake and Tsunami

Fact Sheet #13, Fiscal Year (FY) 2011

March 24, 2011

Note: The last fact sheet was dated March 22, 2011.

KEY DEVELOPMENTS

- The earthquake and tsunami have resulted in more than 9,800 deaths and left approximately 17,500 people missing, as reported by the Government of Japan (GoJ) on March 24. The natural disasters also damaged or destroyed more than 139,000 buildings and 2,000 roads.
- According to the GoJ, the number of people staying in evacuation centers continues to steadily decrease. On March 24, the GoJ reported that approximately 245,000 people remain in evacuation centers, representing a decrease of more than 18,000 people—7 percent of the population in evacuation centers—since March 22. More than half of the people in evacuation centers have left since the peak of displacement on March 16. Of the total number of people staying in evacuation centers, the U.N. Office for the Coordination of Humanitarian Affairs (OCHA) reports that nearly 84,000 people had been evacuated from the GoJ’s 20 km exclusion zone around the Fukushima Daiichi facility.
- On March 24, the Tokyo Metropolitan Government lifted an advisory to avoid infant consumption of tap water after tests recorded decreased levels of radioactive iodine in the water, according to international media sources. Tokyo authorities issued the advisory as a precautionary measure on March 23 following detections of higher-than-normal levels of radioactive iodine in the water supply. The GoJ reported that the levels did not pose a health risk for adults.

NUMBERS AT A GLANCE ¹		SOURCE
Confirmed Deaths	9,811	GoJ NPA ² – March 24, 2011
Missing Persons	17,541	GoJ NPA – March 24, 2011
Number of People in Evacuation Centers	245,394	GoJ NPA – March 24, 2011

FY 2011 HUMANITARIAN FUNDING PROVIDED TO JAPAN TO DATE

USAID/OFDA Assistance for the Japan Earthquake and Tsunami	\$7,291,550
DoD ³ Humanitarian Assistance for the Japan Earthquake and Tsunami	\$24,960,294
Total USAID and DoD Assistance for the Japan Earthquake and Tsunami	\$32,251,844

CONTEXT

- On March 11 at 0046 hours Eastern Standard Time, or 1446 hours Japan Standard Time, a magnitude 9.0 earthquake occurred off the east coast of Honshu Island—approximately 231 miles northeast of Tokyo—at a depth of approximately 15 miles, generating a tsunami that struck the eastern coast of Japan and resulted in additional fatalities and damage, particularly in Miyagi, Fukushima, and Iwate prefectures. Furthermore, the natural disasters led to a serious nuclear incident at the Fukushima Daiichi power plant located approximately 150 miles north of Tokyo.
- USAID immediately activated a Response Management Team in Washington, D.C., and deployed a Disaster Assistance Response Team (DART)—including urban search and rescue (USAR) specialists and nuclear experts—to support Japanese emergency response efforts. On March 11, U.S. Ambassador John V. Roos declared a disaster due to the effects of the earthquake and tsunami in Japan.

Humanitarian Situation and Response

- According to DART assessments, the GoJ continues to meet the immediate needs of individuals in affected areas, with sufficient relief items available locally and higher quantities of relief supplies flowing into affected areas as roads are repaired. DART staff also noted that local level coordination appeared strong and has continued improving across the GoJ as telecommunications repairs are completed.

¹ Figures remain preliminary and are expected to change.

² National Police Agency (NPA)

³ U.S. Department of Defense (DoD)

- Japanese authorities have commenced construction of temporary housing in Iwate and Fukushima prefectures, with preparations ongoing in Miyagi, Tochigi, and Chiba prefectures, according to the U.N. GoJ authorities plan to construct at least 33,000 temporary houses in the coming weeks.
- As of March 23, approximately 216,000 households remained without electricity—an improvement of more than 95 percent from the 5 million households without electrical services on March 12.

Logistics and Relief Supplies

- Approximately 10,000 USAID/OFDA-funded personal protective equipment sets—including suits, masks, gloves, decontamination bags, and other supplies—have arrived in Koriyama city, near the contaminated zone in Fukushima Prefecture, for distribution to individuals working near the nuclear exclusion zone around Fukushima Daiichi nuclear power plant.
- As of March 23, DoD had delivered a total of 337,793 pounds of relief commodities to Japan in support of humanitarian response efforts.

Situation at Nuclear Power Plants

- On March 23, OCHA reported that electrical power had been restored to all six reactors at the Fukushima Daiichi nuclear power plant. Staff from the U.S. Department of Energy, the U.S. Nuclear Regulatory Commission, the U.S. Embassy in Tokyo, and the DART continue to actively monitor and triangulate information on radiation levels in Tokyo.
- The GoJ found radioactive materials exceeding national safety limits in 11 types of vegetables grown in Fukushima Prefecture as of March 23, according to OCHA. The U.N. World Health Organization notes that Japanese authorities have instituted monitoring and are taking measures to address food safety concerns.

USAID AND DOD HUMANITARIAN ASSISTANCE TO JAPAN

<i>Implementing Partner</i>	<i>Activity</i>	<i>Location</i>	<i>Amount</i>
USAID/OFDA ASSISTANCE			
U.S. Embassy in Tokyo	Emergency Relief Support	Affected Areas	\$100,000
DoD	USAR Operations (Transport of USAR cargo)	Affected Areas	\$1,000,000
L.A. County USAR Team	USAR Operations	Affected Areas	\$2,058,000
Fairfax County USAR Team	USAR Operations	Affected Areas	\$2,058,000
	USAID/DART Support Costs		\$1,618,240
	Administrative Support		\$457,310
TOTAL USAID/OFDA			\$7,291,550
DOD ASSISTANCE			
	Emergency Relief Support	Affected Areas	\$24,960,294
TOTAL DOD			\$24,960,294
TOTAL USAID AND DOD HUMANITARIAN ASSISTANCE TO JAPAN IN 2011			\$32,251,844

¹ USAID/OFDA funding represents anticipated or actual obligated amounts as of March 24, 2011. Amounts are subject to change.

² Estimated expenditure as of March 22, 2011.

PUBLIC DONATION INFORMATION

- The most effective way people can assist relief efforts is by making cash contributions to humanitarian organizations that are conducting relief operations. A list of humanitarian organizations that are accepting cash donations for earthquake and tsunami response efforts in Japan can be found at www.usaid.gov/japanquake or www.interaction.org.
- USAID encourages cash donations because they allow aid professionals to procure the exact items needed (often in the affected region); reduce the burden on scarce resources (such as transportation routes, staff time, warehouse space, etc.); can be transferred very quickly and without transportation costs; support the economy of the disaster-stricken region; and ensure culturally, dietary, and environmentally appropriate assistance.
- More information can be found at:
 - The Center for International Disaster Information: www.cidi.org or (703) 276-1914
 - Information on relief activities of the humanitarian community can be found at www.reliefweb.int

**STATEMENT OF R. WILLIAM BORCHARDT
EXECUTIVE DIRECTOR FOR OPERATIONS
UNITED STATES NUCLEAR REGULATORY COMMISSION
TO THE COMMITTEE ON ENERGY AND NATURAL RESOURCES
UNITED STATES SENATE**

**NRC RESPONSE TO RECENT NUCLEAR EVENTS IN JAPAN AND THE CONTINUING
SAFETY OF THE U.S. COMMERCIAL NUCLEAR REACTOR FLEET**

MARCH 29, 2011

The staff of the U.S. Nuclear Regulatory Commission is deeply saddened by the tragedy in Japan. I and many of my colleagues on the NRC staff have had many years of very close and personal interaction with our regulatory counterparts and we would like to extend our condolences to them.

Introduction

The NRC is mindful that our primary responsibility is to ensure the adequate protection of the public health and safety of the American people. We have been very closely monitoring the activities in Japan and reviewing all currently available information. Review of this information, combined with our ongoing inspection and licensing oversight, allows us to say with confidence that the U.S. plants continue to operate safely. There has been no reduction in the licensing or oversight function of the NRC as it relates to any of the U.S. licensees.

We have a long history of conservative regulatory decision-making. We have been using risk insights to help inform our regulatory process, and, over more than 35 years of civilian nuclear power in this country, we have never stopped making improvements to our regulatory framework as we learn from operating experience.

Notwithstanding the very high level of support being provided to respond to events in Japan, we continue to maintain our focus on our domestic responsibilities.

I'd like to begin with a brief overview of our immediate and continuing response. I then want to spend the bulk of my time discussing the reasons for our confidence in the safety

of the U. S. commercial nuclear reactor fleet, and the path forward that we will take to ensure we learn any lessons we need to from events in Japan.

The NRC's Immediate and Continuing Response to Events in Japan

On Friday, March 11th an earthquake hit Japan, resulting in the shutdown of more than 10 reactors. From what we know now, it appears possible that the reactors' response to the earthquake went according to design. The ensuing tsunami, however, appears to have caused the loss of normal and emergency AC power to the six units at the Fukushima Daiichi site; it is those six units that have received the majority of our attention since that time. Units One, Two, and Three at the site were in operation at the time of the earthquake. Units Four, Five, and Six were in previously scheduled outages.

Shortly after 4:00 AM EDT on Friday, March 11th, the NRC Emergency Operations Center made the first call, informing NRC management of the earthquake and the potential impact on U.S. plants. We went into the monitoring mode at the Emergency Operations Center and the first concern for the NRC was possible impacts of the tsunami on U.S. plants and radioactive materials on the West Coast, and in Hawaii, Alaska, and U.S. Territories in the Pacific.

On that same day, we began interactions with our Japanese regulatory counterparts and dispatched two experts to help at the U.S. embassy in Japan. By Monday, we had dispatched a total of 11 staff to Japan. We have subsequently rotated in additional staff to continue our on-the-ground assistance in Japan. The areas of focus for this team are: 1) to assist the Japanese government with technical support as part of the USAID response; and 2) to support the U.S. ambassador. While our focus now is on helping Japan in any way that we can, the experience will also help us assess the implications for U.S. citizens and the U.S. reactor fleet in as timely a manner as possible.

We have an extensive range of stakeholders with whom we have ongoing interaction,

including the White House, Congressional staff, our state regulatory counterparts, a number of other federal agencies, and international regulatory bodies around the world.

The NRC response in Japan and our Emergency Operations Center continue with the dedicated efforts of over 250 NRC staff on a rotating basis. The entire agency is coordinating and pulling together in response to this event so that we can provide assistance to Japan while continuing the normal activities necessary to fulfill our domestic responsibilities.

Let me also just note here in concluding this section of my remarks that the U.S. government has an extensive network of radiation monitors across this country. Monitoring equipment at nuclear power plants and in the U. S. Environmental Protection Agency's (EPA) system has not identified any radiation levels of concern in this country. In fact, natural background radiation from sources such as rocks, the sun, and buildings, is 100,000 times more than doses attributed to any level of the radiation from this event that has been detected in the U.S. to date. Therefore, we feel confident, based on current data, that there is no reason for concern in the United States regarding radioactive releases from Japan.

Continuing Confidence in the Safety of U.S. Nuclear Power Plants

I will now turn to the factors that assure us of ongoing domestic reactor safety. We have, since the beginning of the regulatory program in the United States, used a philosophy of Defense-in-Depth, which recognizes that nuclear reactors require the highest standards of design, construction, oversight, and operation, and does not rely on any single layer for protection of public health and safety. We begin with designs for every individual reactor in this country that take into account site-specific factors and include a detailed evaluation for any natural event, such as earthquakes, tornadoes, hurricanes, floods, and tsunamis, as they relate to that site.

There are multiple physical barriers to radiation in every reactor design. Additionally, there are both diverse and redundant safety systems that are required to be maintained in

operable condition and frequently tested to ensure that the plant is in a high condition of readiness to respond to any scenario.

We have taken advantage of the lessons learned from previous operating experience to implement a program of continuous improvement for the U.S. reactor fleet. We have learned from experience across a wide range of situations, including most significantly, the Three Mile Island accident in 1979. As a result of those lessons learned, we have significantly revised emergency planning requirements and emergency operating procedures. We have addressed many human factors issues regarding how control room employees operate the plant, added new requirements for hydrogen control to help prevent explosions inside of containment, and created requirements for enhanced control room displays of the status of pumps and valves.

The NRC has a post-accident sampling system that enables the monitoring of radioactive material release and possible fuel degradation. One of the most significant changes after Three Mile Island was expansion of the Resident Inspector Program, which has at least two full-time NRC inspectors on site at each nuclear power plant. These inspectors have unfettered access to all licensees' activities.

As a result of operating experience and ongoing research programs, we have developed requirements for severe accident management guidelines. These are components and procedures developed to ensure that, in the event all of the above precautions failed and a severe accident occurred, the plant would still protect public health and safety. The requirements for severe accident management have been in effect for many years and are frequently evaluated by the NRC inspection program.

As a result of the events of September 11, 2001, we identified important pieces of equipment that, regardless of the cause of a significant fire or explosion at a plant, we want licensees to have available and staged in advance, as well as new procedures, training requirements, and policies that would help deal with a severe situation.

Our program of continuous improvement based on operating experience will now include evaluation of the significant events in Japan as well as what we can learn from them. We already have begun enhancing inspection activities through temporary instructions to our inspection staff, including the resident inspectors and the region-based inspectors in our four Regional offices, to look at licensees' readiness to deal with both the design basis accidents and the beyond-design basis accidents. The information that we gather will be used to evaluate the industry's readiness for similar events, and will aid in our understanding of whether additional regulatory actions need to be taken in the immediate term.

We have also issued an information notice to the licensees to make them aware of the events in Japan, and the kinds of activities we believe they should be engaged in to verify their readiness. Specifically, we have requested them to verify that their capabilities to mitigate conditions that result from severe accidents, including the loss of significant operational and safety systems, are in effect and operational. Licensees are verifying the capability to mitigate a total loss of electric power to the nuclear plant. They also are verifying the capability to mitigate problems associated with flooding and the resulting impact on systems both inside and outside of the plant. Also, licensees are confirming the equipment that is needed is in place for the potential loss of equipment due to seismic events appropriate for the site, because each site has its own unique seismic profiles.

During the past 20 years, there have been a number of new rulemakings that have enhanced the domestic fleet's preparedness against some of the problems we are seeing in Japan. The "station blackout" rule requires every plant in this country to analyze what the plant response would be if it were to lose all alternating current so that it could respond using batteries for a period of time, and then have procedures in place to restore alternating current to the site and provide cooling to the core.

The hydrogen rule requires modifications to reduce the impacts of hydrogen

generated for beyond-design basis events and core damage. There are equipment qualification rules that require equipment, including pumps and valves, to remain operable under the kinds of environmental temperature and radiation conditions that you would see under a design basis accident. With regard to the type of containment design used by the most heavily damaged plants in Japan, the NRC has had a Boiling Water Reactor Mark I Containment Improvement Program since the late 1980s, which has required installation of hardened vent systems for containment pressure relief, as well as enhanced reliability of the automatic depressurization system.

The final factor I want to mention with regard to our belief in the ongoing safety of the U.S. fleet is the emergency preparedness and planning requirements in place that provide ongoing training, testing, and evaluations of licensees' emergency preparedness programs. In coordination with our federal partner, the Federal Emergency Management Administration (FEMA), these activities include extensive interaction with state and local governments, as those programs are evaluated and tested on a periodic basis.

The Path Ahead

Beyond the initial steps to address the experience from the events in Japan, the Chairman, with the full support of the Commission, directed the NRC staff to establish a senior level agency task force to conduct a methodical and systematic review of our processes and regulations to determine whether the agency should make additional improvements to our regulatory system and make recommendations to the Commission for its policy direction. This activity will have both near-term and longer-term objectives.

For the near term effort, we are beginning a 90-day review. This review will evaluate all of the currently available information from the Japanese events to identify immediate or near-term operational or regulatory issues potentially affecting the 104 operating reactors in the U.S., including their spent fuel pools. Areas of investigation will include the ability to

protect against natural disasters, response to station blackouts, severe accidents and spent fuel accident progression, radiological consequence analysis, and severe accident management issues regarding equipment. Over this 90-day period, we will develop recommendations, as appropriate, for changes to inspection procedures and licensing review guidance, and recommend whether generic communications, orders, or other regulatory requirements are needed.

This 90-day effort will include a 30-day "Quick Look Report" to the Commission to provide a snapshot of the regulatory response and the condition of the U.S. fleet based on information we have available at that time. Preparing a "Quick Look Report" will also ensure that the Commission is both kept informed of ongoing efforts and prepared to resolve any policy recommendations that surface. I believe we will have limited stakeholder involvement in the first 30 days to accomplish this. However over the 90-day and longer-term efforts we will seek additional stakeholder input. At the end of the 90-day period, a report will be provided to the Commission and to the public. The task force's longer-term review will begin as soon as the NRC has sufficient technical information from the events in Japan.

The task force will evaluate all technical and policy issues related to the event to identify additional potential research, generic issues, changes to the reactor oversight process, rulemakings, and adjustments to the regulatory framework that should be pursued by the NRC. We also expect to evaluate potential interagency issues, such as emergency preparedness, and examine the applicability of any lessons learned to non-operating reactors and materials licensees. We expect to seek input from stakeholders during this process. A report with appropriate recommendations will be provided to the Commission within 6 months of the start of this evaluation. Both the 90-day and final reports will be made publicly available in accordance with normal Commission processes.

Conclusion

In conclusion, I want to reiterate that we continue to make our domestic responsibilities for licensing and oversight of the U.S. licensees our top priority and that the U.S. plants continue to operate safely. In light of the events in Japan, there is a near-term evaluation of their relevance to the U.S. fleet underway, and we are continuing to gather the information necessary for us to take a longer, more thorough look at the events in Japan and their lessons for us. Based on these efforts, we will take all appropriate actions necessary to ensure the continuing safety of the U.S. fleet.

The links below have some info on the plants in Japan. The one that is on the news "having difficulty cooling" has lost offsite power. Apparently the conference call with the Chairman is happening now not at 12:30. You can call 816-5100 and ask for the ET bridge.

Good morning.

Can you please give us an update - things appear to have deteriorated overnight. Additionally, we need responses to the following - are these obtainable near-term?

Thanks
Michal

How many US reactors are located in active earthquake zones (and which reactors)?

How many reactors are along coastal areas that could be affected by a Tsunami (and which ones)?

How many have designs similar to the affected Japanese reactors (and which ones)?

March 12, 2011

NRC EXPERTS DEPLOY TO JAPAN AS PART OF U.S. GOVERNMENT RESPONSE

Two officials from the U.S. Nuclear Regulatory Commission with expertise in boiling water nuclear reactors have deployed to Japan as part of a U.S. International Agency for International Development (USAID) team. USAID is the federal government agency primarily responsible for providing assistance to countries recovering from disaster administering.

"We have some of the most expert people in this field in the world working for the NRC and we stand ready to assist in any way possible," said Chairman Gregory Jaczko.

The NRC has stood up its Maryland-based headquarters Operations Center since the beginning of the emergency in Japan, and is operating on a 24-hour basis.

The NRC will not provide information on the status of that country's nuclear power plants. Check the NRC web site or blog for the latest information on NRC actions. Other sources of information include:

USAID -- www.usaid.gov

U.S. Dept. of State -- www.state.gov

FEMA -- www.fema.gov

White House -- www.whitehouse.gov

Nuclear Energy Institute -- www.nei.org

International Atomic Energy Agency -- www.iaea.org/press/

For background information on generic operations at a boiling-water reactor, including an animated graphic, visit the NRC's website at www.nrc.gov.

Markey Warns that Japan Nuclear Accident Could Happen Here

Congressman Recommends Actions to Prevent Similar Event in America

WASHINGTON (March 12, 2011) -- Representative Edward J. Markey (D-Mass.), the top Democrat on the House Natural Resources Committee and a senior Democratic member of the House Energy and Commerce Committee, today warned that a nuclear accident such as the one currently unfolding in Japan could easily take place in the United States.

"I am shocked by the devastation that has already been caused by the earthquake and tsunami in Japan. It is heart-breaking to see the destruction that has already taken place, and to hear of so many people being killed or injured," said Rep. Markey. "As a result of this disaster, the world is now facing the looming threat of a possible nuclear meltdown at one of the damaged Japanese nuclear reactors. I hope and pray that Japanese experts can successfully bring these reactors under control and avert a Chernobyl-style disaster that could release large amounts of radioactive materials into the environment."

"I am also struck by the fact that the tragic events now unfolding in Japan could very easily occur in the United States. What is happening in Japan right now shows that a severe accident at a nuclear power plant can happen here," said Rep. Markey.

Rep. Markey, who has served for 36 years on the House committees that have oversight over the Nuclear Regulatory Commission (NRC) and the nuclear power industry, today called for several specific policies that the Obama administration and the NRC need to consider putting in place in light of the current Japanese nuclear reactor crisis:

—Imposing a moratorium on siting new nuclear reactors in seismically active areas until the completion of a top-to-bottom review of seismic and tsunami reactor design resiliency, emergency response and evacuation plans.

--Requiring operating reactors located in seismically active zones to be retrofitted with stronger containment and more resilient safety systems.

--Requiring more realistic emergency response and evacuation procedures in the event of a nuclear disaster, such as the one in Japan, in which the nuclear disaster is not the sole crisis unfolding and emergency responders are needed in many other places.

--Requiring a top-to-bottom review of whether design flaws in impacted Japanese reactors -- at least one design is utilized in 23 reactors in the United States -- contributed to problems preventing the safe shut-in of the reactors in the aftermath of the earthquake. The Fukushima Daiichi is a General Electric Boiling Water Reactor with Mark containment, the same type as 23 reactors in the United States.

--Requiring a comprehensive review of whether backup power and reactor coolant systems are adequate to deal with long power outages associated with earthquakes, acts of terrorism or other major disasters.

--Requiring a review of the U.S. Department of Energy's loan guarantee to program evaluate whether the current "risk premium" assessed for pending loan guarantees for nuclear power plants needs to be adjusted to more fully account for the financial risks of a nuclear accident in the aftermath of the Japanese nuclear reactor crisis and the likely financial market response to that crisis, and ensuring that DOE does not award even conditional loan guarantees for construction of nuclear reactors whose designs have been determined to be seismically safe.

--Reversing a decision made by the Bush administration decision to ignore a 2002 law, authored by Rep. Markey, requiring the distribution of potassium iodide to residents living within 20 miles of nuclear power plants. Potassium iodide is a safe, effective and inexpensive means of protecting against the cancer-causing effects of radioactive iodine, which has already been detected around one of the impacted Japanese reactors.

--Suspending the NRC's pending approval of the design for the AP 1000, a new nuclear reactor design. One of NRC's most senior staff warned that the containment structure for this reactor design would not be able to withstand a strong earthquake and it was so brittle it could "shatter like a glass cup" under sufficient stress. That revelation led Rep. Markey to send a letter to the NRC urging the resolution of the safety concerns just days before the Japanese earthquake. That letter can be found [HERE](#).

"The unfolding disaster in Japan must produce a seismic shift in how we address nuclear safety here in America," said Rep. Markey.

UPDATE AS OF 12:30 P.M. EDT, SUNDAY, MARCH 13

NEI has created a new fact sheet, "Radiation and the Japanese Nuclear Reactors," which describes the events at the Fukushima Daiichi and Daini nuclear plants in Japan following the earthquake and tsunami nearby. Also a description of radiation dose limits and exposures to workers and the public in the United States, with a placeholder for radiation doses at the affected reactors in Japan.

Direct link to the fact sheet: <http://www.nei.org/resourcesandstats/documentlibrary/safetyandsecurity/factsheet/radiation-and-the-japanese-nuclear-reactors>

Subject: RE: WSJ.com - Nuclear Industry Pins Hopes on Longtime Foe

He is very negative. Sounded like (b)(6). He points to what happened after TMI and says the same thing is likely to happen here. He mentioned the temporary shutdown of the other B&W reactors, the moratorium on new licensing, and lengthy reviews of the accident, although he does allow that the impact may be somewhat less here since the accident happened in Japan. He also highlights that Vermont Yankee and Indian Point will be shut down. Mostly, he continues to say that no more nuclear plants should be built.. That seems to be his big focus. He also thinks that Greg is doing a good job.

Yes, I saw it. Interesting article. I continue to think that Greg is doing a good job in maneuvering between the pressures from both sides. But there will be a lot of interesting issues to deal with in the aftermath of the accident. I was on a panel last night with (b)(6) at the New York Society of Securities Analysts, and then we had dinner together. That was interesting as well.

Mike,

I was looking for a summarization of seismic hazard analysis (NRC-style) in layman's terms, but couldn't find anything suitable. Simple and seismic hazard assessment are generally two concepts that don't go together. :-)

So, I wrote up the attached. Please let me know if I can expand/explain/delete anything to make it more useful for your purposes. Please feel free to correct or point out spelling and grammatical errors. It's now 2 am and I can't proofread it at this time. (I find editing on a computer screen challenging).

I did my best. I hope you and the chairman find it helpful and that it suits your purposes.

Cheers,
Annie

Annie,

Do not produce. After discussion the sample plot with the Chairman and your discussion on faults, earthquake strength, and ground motion the Chairman decided to forego a graphic showing US nuclear plans and seismic hazards.

To help the Chairman prepare for his Congressional hearing/briefing do you have or know of a somewhat elementary written description how earthquake strength relates to ground motion and frequency? Something akin to the verbal description that you provided me, but in written form that the Chairman could read prior to the hearing/briefing. A description that is consistent with the manner NRC assess seismic hazards would be best.

Michael L. Marshall, Jr.

Subject: sample plots

I can't find exactly what I want, but the idea is to use a pretty plot (like the bottom one) and show the plants (like in the top one without the seismograph stations).

What do you think? Should I produce?

March 15, 2011

NRC ANALYSIS CONTINUES TO SUPPORT JAPAN'S PROTECTIVE ACTIONS

NRC analysts overnight continued their review of radiation data related to the damaged Japanese nuclear reactors. The analysts continue to conclude the steps recommend by Japanese authorities parallel those the United States would suggest in a similar situation.

The Japanese authorities Monday recommended evacuation to 20 kilometers around the affected reactors and said that persons out to 30 kilometers should shelter in place.

Those recommendations parallel the protective actions the United States would suggest should dose limits reach 1 rem to the entire body and 5 rem for the thyroid, an organ particularly susceptible to radiation uptake.

A rem is a measure of radiation dose. The average American is exposed to approximately 620 millirems, or 0.62 rem, of radiation each year from natural and manmade sources.

Japan – Earthquake and Tsunami

Fact Sheet #5, Fiscal Year (FY) 2011

March 15, 2011

Note: The last fact sheet was dated March 14, 2011.

KEY DEVELOPMENTS

- Reported casualties due to the earthquake and tsunami continue to increase. On March 15, the Government of Japan (GoJ) reported a death toll of 3,373 people, a total of 7,558 people missing, and 1,990 people injured. Japanese national media reports that more than 15,000 people remain unaccounted for in the affected areas.
- On March 14, the U.S. Geological Survey (USGS) raised the magnitude of the March 11 earthquake to 9.0 from 8.9. This magnitude places the earthquake as the fourth largest in the world since 1900.
- An explosion and a fire occurred at the Fukushima Daiichi nuclear power plant at approximately 1730 hours EDT on March 14, or 0630 hours Japan Standard Time (JST) on March 15. The exact cause of the explosion remains unverified. Nearly 210,000 people remain preemptively evacuated from the vicinities of Fukushima Daiichi and Fukushima Daini nuclear power plants.
- To date, USAID/OFDA has provided more than \$5.8 million, of a total \$8 million in planned assistance, to support populations affected by the earthquake and tsunami.

NUMBERS AT A GLANCE ¹		SOURCE
Confirmed Deaths	3,373	GoJ NPA ² – March 15, 2011
Missing Persons	7,558	GoJ NPA – March 15, 2011
Number of people in evacuation centers	416,300	OCHA ³ – March 15, 2011

FY 2011 HUMANITARIAN FUNDING PROVIDED TO JAPAN TO DATE

USAID/OFDA Assistance for the Japan Earthquake and Tsunami.....	\$5,856,000
Total USAID Humanitarian Assistance for the Japan Earthquake and Tsunami	\$5,856,000
Total Planned Assistance from USAID for the Japan Earthquake and Tsunami	\$8,000,000

CONTEXT

- On March 11 at 0046 hours EST, or 1446 hours JST, a magnitude 9.0 earthquake occurred east of Honshu—the largest and main island of Japan—at a depth of approximately 15 miles. The epicenter of the earthquake was located 80 miles east of Sendai, the capital of Miyagi Prefecture, and 231 miles northeast of Tokyo. The earthquake generated a large tsunami that resulted in additional fatalities and damage, particularly in Miyagi, Fukushima, and Iwate prefectures.
- On March 11, U.S. Ambassador to Japan John V. Roos declared a disaster due to the effects of the earthquake and tsunami. In response, USAID/OFDA provided an initial \$100,000 through the U.S. Embassy in Tokyo to assist with local relief efforts. USAID deployed a Disaster Assistance Response Team (DART)—including two urban search and rescue (USAR) teams from Fairfax County, Virginia, and Los Angeles County, California—to Japan to coordinate U.S. Government (USG) response and support Japanese USAR efforts. In addition, USAID activated a Response Management Team (RMT) in Washington, D.C.
- InterAction, an alliance of U.S.-based non-governmental organizations (NGOs), maintains a list of organizations accepting donations for the Japanese earthquake response. The American Red Cross (AmRC) also receives donations through text messages of “redcross” sent to 90999.

USAR Operations

- In Ofunato City, both USAR teams funded by USAID/OFDA conducted searches from 0630 hours JST until dusk on March 15, with no night operations, at the instruction of the local fire brigade. Teams conducted a search in an area most affected by the tsunami, where the wave height was up to 25 feet above normal and affected areas up to 10 blocks inland.

¹ Figures remain preliminary and are expected to change.

² National Police Agency (NPA).

³ U.N. Office for the Coordination of Humanitarian Affairs (OCHA).

- The GoJ has mobilized 100,000 troops, 9,500 firefighters, and 920 police to conduct search and rescue efforts, saving 22,184 people to date.
- At the request of the GoJ, the U.N. Disaster Assessment and Coordination (UNDAC) team is assisting the GoJ's response effort by registering and coordinating incoming USAR teams. UNDAC is assisting the GoJ on incoming international relief goods and services in order to limit unsolicited contributions. The team—including specialists from France, the U.K., Sweden, India, Republic of Korea and Japan—is setting up an onsite operations and coordination center (OSOCC) in Tokyo.
- The U.S. USAR teams have worked with the U.K. and China USAR teams to establish a sub-OSOCC at their base of operations in Ofunato. The sub-OSOCC coordinates with the OSOCC to ensure a systematic international USAR effort. The teams hold operational readiness meetings with local authorities to establish operational assignments, search criteria, and incident objectives.
- The U.S. Department of Defense (DoD) continues to assist with search and rescue activities at sea via aerial and surface support. On March 15, the *USS Tortuga* arrived off the coast of Hokkaido Island in northern Japan to provide transport of 279 Japan defense forces personnel, equipment, and supplies in support of Japanese rescue efforts.

Humanitarian Needs

- On March 15, OCHA reported that the primary humanitarian needs remain food, safe drinking water, blankets, medical supplies, fuel, and sanitation infrastructure, which the GoJ and private sector in Japan are urgently mobilizing to the affected areas.
- On March 15, DART staff met with officials from the UNDAC team, the Japan Platform, the Japan International Cooperation Agency, the GoJ Ministry of Foreign Affairs (MoFA), and the European Commission's Humanitarian Aid Office in Tokyo. The MoFA representative reported that the GoJ does not currently need material assistance beyond what has already been provided but noted that financial assistance would be welcome.

Emergency Food Assistance

- In response to food needs, the GoJ and Japan's private sector have distributed more than 550,000 meals—a quarter of the planned food delivery—to affected populations.

Water, Sanitation, and Hygiene

- An estimated 1.4 million households in 14 prefectures throughout Japan remain without access to safe drinking water, according to OCHA. The GoJ and Japanese private sector continue to provide safe drinking water to affected populations.

Infrastructure and Public Services

- The GoJ NPA reported increased figures for infrastructure damage. To date, the earthquake has damaged or destroyed more than 72,000 buildings, as well as an estimated 1,206 roads and 47 bridges throughout northeastern Japan. Transportation systems remain paralyzed, although the GoJ is restoring key roads, bridges, and railways, according to OCHA.
- The DART has received unconfirmed reports of food shortages in Tokyo. The Japan Platform—a Japanese consortium of NGOs—reports that some assessments indicate that food shortages are caused by people hoarding and not by interruptions to the supply chain. The DART continues to monitor this issue.
- The U.S. Nuclear Regulatory Commission (NRC) Headquarters Operations Center is staffed and is monitoring and analyzing the events in Japan. Two NRC experts are supporting USG response efforts in Japan, and nine additional NRC experts are en route. NRC is providing regular status updates and issuing public press releases regarding the events in Japan.
- DoD has contributed two pumper trucks to assist Japanese authorities responding to the situation at the Fukushima Daiichi nuclear power plant.

Humanitarian Coordination

- On March 14, the RMT participated in a teleconference organized by the U.S. Chamber of Commerce that included representatives from the U.S. Embassy in Tokyo, DoD, and the humanitarian community. The RMT updated participants on U.S. response efforts, fielded questions on how businesses and corporations could best help in the relief effort, and reinforced the message that making cash contributions is the most effective way for people to assist.

USAID HUMANITARIAN ASSISTANCE TO JAPAN

<i>Implementing Partner</i>	<i>Activity</i>	<i>Location</i>	<i>Amount</i>
USAID/OFDA ASSISTANCE			
U.S. Embassy in Tokyo	Emergency Relief Support	Affected Areas	\$100,000
DoD	USAR Operations (Transport of USAR teams)	Affected Areas	\$1,000,000
L.A. County USAR Team	USAR Operations	Affected Areas	\$2,058,000
Fairfax County USAR Team	USAR Operations	Affected Areas	\$2,058,000
	USAID/DART Support Costs		\$640,600
TOTAL USAID/OFDA			\$5,856,600
TOTAL USAID HUMANITARIAN ASSISTANCE TO JAPAN IN FY 2011			\$5,856,600

¹ USAID/OFDA funding represents anticipated or actual obligated amounts as of March 15, 2011.

PUBLIC DONATION INFORMATION

- The most effective way people can assist relief efforts is by making cash contributions to humanitarian organizations that are conducting relief operations. A list of humanitarian organizations that are accepting cash donations for earthquake and tsunami response efforts in Japan can be found at www.interaction.org.
- USAID encourages cash donations because they allow aid professionals to procure the exact items needed (often in the affected region); reduce the burden on scarce resources (such as transportation routes, staff time, warehouse space, etc.); can be transferred very quickly and without transportation costs; support the economy of the disaster-stricken region; and ensure culturally, dietary, and environmentally appropriate assistance.
- More information can be found at:
 - USAID: www.usaid.gov
 - The Center for International Disaster Information: www.cidi.org or (703) 276-1914
 - Information on relief activities of the humanitarian community can be found at www.reliefweb.int

USAID/OFDA bulletins appear on the USAID web site at http://www.usaid.gov/our_work/humanitarian_assistance/disaster_assistance/

Hey Eugene,

I was sent the MSNBC article that outlines NRC's at-risk ranking for nuclear plants from seismic activity.

How does IP#3 differ so much from IP#2 that there risk assessment is so varied?

Thanks,

Ben

Subject: RE: REMINDER: Conference call on Japan earthquake/tsunami disaster Wednesday, March 16, at 2 pm and daily thereafter

Please ensure that the spokespeople from your departments/agencies on the 2 pm call today see the following statement.

From: State Department Press Office
Sent: Wed Mar 16 13:32:03 2011
Subject: Statement Issued by U.S. Embassy Tokyo
State Department Press Corps:

Following is a statement being issued by U.S. Embassy Tokyo now:

Press Office
U.S. Department of State

U.S. Embassy
Tokyo, Japan

March 16, 2011

Statement by U.S. Ambassador John V. Roos

The United States Nuclear Regulatory Commission (NRC), the Department of Energy and other technical experts in the U.S. Government have reviewed the scientific and technical information they have collected from assets in country, as well as what the Government of Japan has disseminated, in response to the deteriorating situation at the Fukushima Nuclear Power Plant. Consistent with the NRC guidelines that apply to such a situation in the United States, we are recommending, as a precaution, that American citizens who live within 50 miles (80 kilometers) of the Fukushima Nuclear Power Plant evacuate the area or to take shelter indoors if safe evacuation is not practical.

We want to underscore that there are numerous factors in the aftermath of the earthquake and Tsunami, including weather, wind direction and speed, and the nature of the reactor problem that affect the risk of radioactive contamination within this 50 mile (80 km) radius or the possibility of lower-level radioactive materials reaching greater distances.

BC/380

The U.S. Embassy will continue to update American citizens as the situation develops. U.S. citizens in need of emergency assistance should send an e-mail to JapanEmergencyUSC@state.gov with detailed information about their location and contact information, and monitor the U.S. Department of State website at travel.state.gov.

The United States is continuing to do everything in its power to help Japan and American citizens who were there at the time of these tragic events. To support our citizens there, the Embassy is working around the clock, we have our consular services available 24 hours a day to determine the whereabouts and well-being of all U.S. citizens in Japan and we have offered our Japanese friends includes disaster response experts, search and rescue teams, technical advisers with nuclear expertise and logistical support from the United States military.

If I thought I could be of some assistance to you and Becky I would do it. Personally, I don't know what I could do to help. After TMI, very near where I grew up, I made a conscience effort to avoid working with reactors so I concentrated on the back end of the fuel cycle. I'm also quite sure that Amy would not take kindly to my being involved. I guess I would have to have a pretty defined role as to what I would be doing. Again, I would consider doing it to help you two and for no other reason, other than money, of course.

BC/381

I hope you aren't working 24/7.

NRC: No water in spent fuel pool of Japan plant

WASHINGTON — The chief of the U.S. Nuclear Regulatory Commission said Wednesday that all the water is gone from one of the spent fuel pools at Japan's most troubled nuclear plant, but Japanese officials denied it.

If NRC Chairman Gregory Jaczko is correct, this would mean there's nothing to stop the fuel rods from getting hotter and ultimately melting down. The outer shell of the rods could also ignite with enough force to propel the radioactive fuel inside over a wide area.

Jaczko did not say Wednesday how the information was obtained, but the NRC and U.S. Department of Energy both have experts on site at the Fukushima Dai-ichi complex of six reactors. He said the spent fuel pool of the complex's Unit 4 reactor has lost water.

Jaczko said officials believe radiation levels are extremely high, and that could affect workers' ability to stop temperatures from escalating.

Japan's nuclear safety agency and Tokyo Electric Power Co., which operates the complex, deny water is gone from the pool. Utility spokesman Hajime Motojuku said the "condition is stable" at Unit 4.

Subject: Japan - Leg Call Tonight 7 pm

Hi all,

A million thanks for all of the on-going hard work to keep the Hill updated and informed about the events in Japan. We want to quickly touch base at 7 p.m. this evening. The call shouldn't run long and it will help us coordinate for tomorrow. This evening, let's strategize on how best to run the 2 pm Hill calls for the remainder of the week, confirm what email notices are going up to the Hill and discuss transitioning these calls next week so they occur less frequently. We should also confirm that we have the right notification schemes ready to activate as circumstances change on the ground. And finally, as you all know there is an interagency meeting each day at 8 am and it is where we get the latest situational updates and messages so we encourage you all to attend or get the downloads from you principals. Many thanks.

Louisa & Shelly

State Department Press Corps:

BC/386

Following is a statement being issued by U.S. Embassy Tokyo now.

Press Office
U.S. Department of State

U.S. Embassy
Tokyo, Japan

March 16, 2011

Statement by U.S. Ambassador John V. Roos

The United States Nuclear Regulatory Commission (NRC), the Department of Energy and other technical experts in the U.S. Government have reviewed the scientific and technical information they have collected from assets in country, as well as what the Government of Japan has disseminated, in response to the deteriorating situation at the Fukushima Nuclear Power Plant. Consistent with the NRC guidelines that apply to such a situation in the United States, we are recommending, as a precaution, that American citizens who live within 50 miles (80 kilometers) of the Fukushima Nuclear Power Plant evacuate the area or to take shelter indoors if safe evacuation is not practical.

We want to underscore that there are numerous factors in the aftermath of the earthquake and Tsunami, including weather, wind direction and speed, and the nature of the reactor problem that affect the risk of radioactive contamination within this 50 mile (80 km) radius or the possibility of lower-level radioactive materials reaching greater distances.

The U.S. Embassy will continue to update American citizens as the situation develops. U.S. citizens in need of emergency assistance should send an e-mail to JapanEmergencyUSC@state.gov with detailed information about their location and contact information, and monitor the U.S. Department of State website at travel.state.gov.

The United States is continuing to do everything in its power to help Japan and American citizens who were there at the time of these tragic events. To support our citizens there, the Embassy is working around the clock, we have our consular services available 24 hours a day to determine the whereabouts and well-being of all U.S. citizens in Japan and we have offered our Japanese friends includes disaster response experts, search and rescue teams, technical advisers with nuclear expertise and logistical support from the United States military.

Becky,
The report is, I believe,
GENERIC ISSUE 199, "IMPLICATIONS OF UPDATED PROBABILISTIC SEISMIC HAZARD ESTIMATES IN CENTRAL AND EASTERN UNITED STATES ON EXISTING PLANTS"

I have the public document as a PDF. Shall I send it to Adam? Do we want to accompany this with anything?

UNITED STATES
NUCLEAR REGULATORY COMMISSION
OFFICE OF NUCLEAR REACTOR REGULATION
OFFICE OF NUCLEAR MATERIAL SAFETY AND SAFEGUARDS
WASHINGTON, DC 20555-0001

September 2, 2010

NRC INFORMATION NOTICE 2010-18: GENERIC ISSUE 199, "IMPLICATIONS OF
UPDATED PROBABILISTIC SEISMIC HAZARD
ESTIMATES IN CENTRAL AND EASTERN
UNITED STATES ON EXISTING PLANTS"

ADDRESSEES

All holders of an operating license or construction permit for a nuclear power reactor issued under Title 10 of the *Code of Federal Regulations* (10 CFR) Part 50, "Domestic Licensing of Production and Utilization Facilities."

All holders of or applicants for a license (general or site specific) for an independent spent fuel storage installation (ISFSI) issued pursuant to 10 CFR Part 72, "Licensing Requirements for the Independent Storage of Spent Nuclear Fuel, High-Level Radioactive Waste, and Reactor-Related Greater Than Class C Waste."

PURPOSE

The U.S. Nuclear Regulatory Commission (NRC) is issuing this information notice (IN) to inform addressees about the August 2010 NRC document, "Safety/Risk Assessment Results for Generic Issue [GI] 199, Implications of Updated Probabilistic Seismic Hazard Estimates in Central and Eastern United States on Existing Plants" (Agencywide Documents Access and Management System (ADAMS) Accession No. ML100270582 (package)), that discusses recent updates to estimates of the seismic hazard in the central and eastern United States (CEUS). Although not specifically evaluated as part of Generic Issue 199 (GI-199), the updated seismic hazard estimates also apply to independent spent fuel storage installation (ISFSIs) located in the CEUS. This includes ISFSIs that are co-located at the reactor sites, which use the plant safe shutdown earthquake (SSE) as their design/licensing basis, as well as ISFSIs located away from the reactor site, which have their own location-specific licensing/design-basis earthquake. The NRC expects that recipients will review the information for applicability to their facilities and consider actions, as appropriate. Suggestions contained in this IN are not NRC requirements; therefore, no specific action or written response is required.

ML101970221

BACKGROUND

In support of early site permits for new reactors, the NRC staff reviewed updates to the seismic source and ground motion models provided by applicants, which identified higher seismic hazard estimates that may result in the increased likelihood of exceeding the SSE at operating facilities in the CEUS. This seismic update included new Electric Power Research Institute (EPRI) models to estimate earthquake ground motion and updated models for earthquake sources in the CEUS such as around Charleston, South Carolina and New Madrid, Missouri.

The regulatory requirements that establish the seismic design bases for currently operating nuclear power plants are 10 CFR Part 100, "Reactor Site Criteria", and 10 CFR Part 50, Appendix A, "General Design Criteria for Nuclear Power Plants," Criterion 2, "Design bases for protection against natural phenomena." These regulatory requirements are fundamentally deterministic, while the new seismic hazard information evaluated for GI-199 is fundamentally probabilistic.

The NRC Probabilistic Risk Assessment (PRA) Policy Statement encourages the use of PRA methods and states that "PRA should be used to support the proposal for additional regulatory requirements in accordance with 10 CFR 50.109, "Backfitting." NRC regulations and guidance such as 10 CFR 50.109 and NUREG/BR-0058, "Regulatory Analysis Guidelines of the U.S. Nuclear Regulatory Commission," provide a framework for changing regulatory positions in light of new information. The Generic Issues Program (GIP) utilizes the "backfitting" and regulatory analysis guidelines for evaluating generic issues.

Considering that estimates of the seismic hazard for some currently operating plants in the CEUS have increased, the NRC staff reviewed and evaluated this new information along with similar U.S. Geological Survey (USGS) seismic hazard estimates. From this review, the NRC staff concluded that seismic design of currently operating reactor and ISFSI facilities provides safety margin; however, the likelihood of exceeding the seismic hazard values used in plant design and in previous evaluations may be higher than previously understood for some currently operating CEUS sites. This review also resulted in the NRC staff issuing a memorandum, dated May 26, 2005 (ADAMS Accession No. ML051450456), recommending that the new data and models for CEUS seismic hazards be examined under the NRC's GIP as GI-199.

As part of its examination, the NRC staff compared the new seismic hazard data with the earlier evaluations conducted as a part of the Individual Plant Examination of External Events (IPEEE) program. The examination was intended to assess seismic performance of existing plants at or beyond the design-basis level. Based on that assessment (using the seismic hazard information available at the time of the IPEEE), the NRC staff determined that the seismic designs of operating plants in the CEUS still provide adequate safety margins.

To follow-up with interested stakeholders, the NRC staff held a public meeting on February 6, 2008, attended by many operating reactor licensees and EPRI representatives (ADAMS Accession No. ML080350189), to discuss its ongoing activities related to GI-199. In that meeting, the NRC staff described the screening process and criteria and explained the screening analysis results (ADAMS Accession No. ML073400477).

DESCRIPTION OF CIRCUMSTANCES

The NRC's "Safety/Risk Assessment Results for Generic Issue 199, Implications of Updated Probabilistic Seismic Hazard Estimates in Central and Eastern United States on Existing Plants," documents the two-stage assessment performed by the NRC staff to determine the implications of updated probabilistic seismic hazard estimates in the CEUS on existing plants. The first stage involved evaluating the change in seismic hazard with respect to previous estimates at individual plants. The second stage estimated the change in seismic core damage frequency (SCDF) as a result of the change in the seismic hazard for each operating plant in the CEUS. The Safety/Risk Assessment describes the NRC staff's approach in detail. The methodology, analyses, results, and limitations of the Safety/Risk Assessment are briefly summarized below.

DISCUSSION

Evaluation of Changes in Seismic Hazard Estimates

In this stage, the NRC staff evaluated the potential significance of changes in seismic hazards in a stepwise fashion by assessing the degree to which the seismic hazard estimates developed using the most recent seismic hazard information and NRC staff guidance deviate from previously developed assessments. The comparison of results indicated an increase in the seismic hazard estimates relative to previous assessments for a number of plants.

Evaluation of Changes in Seismic Core Damage Frequency

In the second stage, the NRC staff developed SCDF estimates using three sets of mean seismic hazard curves (the 1989 EPRI study, the 1994 Lawrence Livermore National Laboratory study, and a 2008 USGS study) and plant-level fragility curves developed from information provided in the IPEEE submittals. The changes in NRC's SCDF for a number of plants lie in the range of 10^{-4} per year to 10^{-5} per year, which meets the numerical risk criteria for an issue to proceed to the regulatory assessment phase of the GIP.

It should be recognized that the approach used to estimate SCDF in the Safety/Risk Assessment does not provide insight into which structures, systems, and components (SSCs) are important to seismic risk. Such knowledge provides the basis for postulating plant backfits and conducting a value-impact analysis of potential backfits during a regulatory analysis. For a number of plants, especially those that performed reduced-scope seismic margins analysis, detailed information is presently not available to the NRC regarding plant seismic capacity (the ability of a plant's SSCs to successfully withstand an earthquake) beyond the required design-basis level.

CONCLUSION

- (1) Operating nuclear power plants are safe. The Safety/Risk Assessment confirms that the overall seismic risk estimates remain small for operating nuclear power plants and the current seismic design provides a safety margin.
- (2) Some seismic hazard estimates have increased. Updates to seismic data and models show increased seismic hazard estimates for some operating nuclear power plant sites and co-located ISFSI facilities in the CEUS. New consensus seismic hazard estimates for the CEUS will become available in early 2011 (these are a product of a joint NRC, U.S. Department of Energy, USGS, and EPRI project). Based on this, the NRC staff has commenced evaluating the development of a regulatory mechanism to routinely and promptly evaluate new seismic hazard information as it becomes available.
- (3) Assessment of GI-199 will continue, however, not all of the information needed to perform the regulatory assessment is currently available to the NRC staff. The NRC will follow the appropriate regulatory process to request operating plants and ISFSIs to provide specific information relating to their facilities to enable the NRC staff to complete the Regulatory Assessment. Based on results of the Safety/Risk Assessment, the NRC staff determined that the issue should continue to the regulatory assessment stage of the GIP for further investigation to assess whether candidate backfits should be considered for plant improvements to reduce seismic risk and to evaluate their potential cost-justified imposition.

While these conclusions do not point to a safety concern, there were limitations to the risk methodology employed and uncertainties associated with the data used. As such, although there is no specific requirement, licensees of operating power reactors and ISFSI facilities in the CEUS may evaluate whether the updated seismic hazard estimates impact their current design/licensing basis.

Japan – Earthquake and Tsunami

Fact Sheet #6, Fiscal Year (FY) 2011

March 16, 2011

Note: The last fact sheet was dated March 15, 2011.

KEY DEVELOPMENTS

- As of March 16, the earthquake and tsunami have resulted in 4,314 deaths and left 8,616 people missing, according to the Government of Japan (GoJ).
- On March 16, the two USAID-supported urban search and rescue (USAR) teams deployed with the U.S. Government (USG) Disaster Assistance Response Team (DART) completed search assignments in southern Ofunato City, Iwate Prefecture, and Kamaishi City, located approximately 25 miles north of Ofunato, but did not detect any live victims. USAR teams plan to conduct another search assignment on March 17.
- On March 16, the U.S. Embassy in Tokyo issued a statement, noting that the U.S. Nuclear Regulatory Commission (NRC), the U.S. Department of Energy (DoE), and other technical experts in the U.S. Government have reviewed the scientific and technical information in response to the deteriorating situation at the Fukushima nuclear power plant. The U.S. Embassy in Tokyo recommended, as a precaution, that American citizens who live within 50 miles (80 kilometers) of the plant evacuate the area or take shelter indoors if safe evacuation is not practical.

NUMBERS AT A GLANCE ¹		SOURCE
Confirmed Deaths	4,314	GoJ NPA ² – March 16, 2011
Missing Persons	8,606	GoJ NPA – March 16, 2011
Number of People Evacuated	492,355	OCHA ³ – March 16, 2011

FY 2011 HUMANITARIAN FUNDING PROVIDED TO JAPAN TO DATE

USAID/OFDA Assistance for the Japan Earthquake and Tsunami.....	\$6,125,337
Total USAID Humanitarian Assistance for the Japan Earthquake and Tsunami.....	\$6,125,337
Total Planned Assistance from USAID for the Japan Earthquake and Tsunami.....	\$8,000,000

CONTEXT

- On March 11 at 0046 hours Eastern Standard Time (EST), or 1446 hours Japan Standard Time (JST), a magnitude 9.0 earthquake occurred east of Honshu—the largest and main island of Japan—at a depth of approximately 15 miles. The epicenter of the earthquake was located 80 miles east of Sendai, the capital of Miyagi Prefecture, and 231 miles northeast of Tokyo. The earthquake generated a large tsunami that resulted in additional fatalities and damage, particularly in Miyagi, Fukushima, and Iwate prefectures.
- On March 11, U.S. Ambassador to Japan John V. Roos declared a disaster due to the effects of the earthquake and tsunami. In response, USAID/OFDA provided an initial \$100,000 through the U.S. Embassy in Tokyo to assist with local relief efforts. USAID deployed a DART—including two USAR teams from Fairfax County, Virginia, and Los Angeles County, California—to Japan to coordinate USG response and support Japanese USAR efforts. In addition, USAID activated a Response Management Team (RMT) in Washington, D.C.
- InterAction, an alliance of U.S.-based non-governmental organizations (NGOs), maintains a list of organizations accepting donations for the Japanese earthquake response. The American Red Cross (AmRC) accepts donations through text messages of “redcross” sent to 90999.

USAR Operations and Logistics

- To date, the U.S. Department of Defense (DoD) has conducted 113 helicopter and 125 aircraft missions to support survivor recovery efforts, transportation of personnel, and distribution of more than 129,000 pounds of water and 4,200 pounds of food assistance. In addition, the III Marine Expeditionary Force has facilitated re-opening of an airfield in Sendai. DoD continues to support search and rescue operations at sea via use of aerial and surface assets.

¹ Figures remain preliminary and are expected to change.
² National Police Agency (NPA).
³ U.N. Office for the Coordination of Humanitarian Affairs (OCHA).

- The Ministry of Agriculture, Forestry, and Fisheries of Japan (MAFF) announced that the GoJ will issue an emergency transportation pass for vehicles transporting food and livelihood supplies, including fuel, to affected areas, as reported by OCHA.

Shelter and Settlements

- More than 430,000 people have evacuated their homes and are currently living in temporary shelters—including in public buildings such as schools, sports centers, and community centers—in seven prefectures, according to OCHA. The GoJ Ministry of Land, Infrastructure, Transport, and Tourism has ordered 600 temporary shelters to be constructed within two weeks, with an additional 4,200 shelters constructed in four weeks and 30,000 shelters in two months. A GoJ official is working to secure land for these shelters in Iwate, Miyagi, and Fukushima prefectures.

Emergency Food Assistance

- The MAFF is coordinating with the private sector to mobilize food and water rations, according to OCHA.

Water, Sanitation, and Hygiene

- The estimated number of individuals lacking access to water has increased from 1.4 million to 1.6 million, according to OCHA. The GoJ is coordinating with 245 water supply companies to secure emergency water supply. The GoJ has arranged to send 314 water supply vehicles to the most affected areas, and local authorities have supplied safe drinking water.

Health

- More than 100 Japanese Disaster Medical Assistance Teams (DMATs) are in Iwate, Miyagi, and Fukushima prefectures, according to OCHA. In addition, the Japanese Red Cross Society has 85 medical teams in affected areas.

Nuclear Infrastructure

- On March 16, nine NRC staff members joined the DART, bringing the number of NRC personnel on the DART to 11. Nuclear specialists on the DART—including 11 NRC officers, 1 DoE officer, and 1 U.S. Department of Health and Human Services (HHS) officer—are monitoring technical aspects of the nuclear issues at the Fukushima Daiichi nuclear power plant, engaging with GoJ officials on the status of the health impacts of radiation, and providing guidance to the U.S. Embassy in Tokyo on efforts to cool reactors.
- In response to the ongoing situation at the Fukushima nuclear plant, two DoD Humanitarian Assistance Survey Teams with chemical, biological, radiological, and nuclear expertise have positioned at Sendai and Yamagata cities, and a U.S. Northern Command contingent is traveling to Japan for crisis management planning.
- The NRC Headquarters Operations Center is staffed and is monitoring and analyzing the events in Japan. NRC is providing regular status updates to the USG community and the public.

Humanitarian Needs

- DART staff continue to clarify requests from the GoJ and ascertain the needs of the GoJ and affected populations.
- The DART continues to meet and coordinate with the U.N. Disaster Assessment and Coordination team, the Japan Platform, the Japan International Cooperation Agency, the GoJ Ministry of Foreign Affairs, and the European Commission's Humanitarian Aid department for information sharing on emerging needs.
- The USG is responding to specific limited requests from the GoJ for technical and material assistance; however, the GoJ continues to express a preference for financial assistance.

International Donor Support

- The GoJ has received 113 offers of assistance and has accepted 14 of these offers, according to OCHA. Media reports indicate that China, Mongolia, Taiwan, and Thailand have each pledged \$1 million or more, with Estonia, Vietnam, Cambodia, the Maldives, and Afghanistan each pledging between \$50,000 and \$260,000.

USAID HUMANITARIAN ASSISTANCE TO JAPAN

<i>Implementing Partner</i>	<i>Activity</i>	<i>Location</i>	<i>Amount</i>
USAID/OFDA ASSISTANCE			
U.S. Embassy in Tokyo	Emergency Relief Support	Affected Areas	\$100,000
DoD	USAR Operations (Transport of USAR teams)	Affected Areas	\$1,000,000
L.A. County USAR Team	USAR Operations	Affected Areas	\$2,058,000
Fairfax County USAR Team	USAR Operations	Affected Areas	\$2,058,000
HHS	Health	Affected Areas	\$93,360
	USAID/DART Support Costs		\$615,600
	Administrative Support		\$200,377
TOTAL USAID/OFDA			\$6,125,337
TOTAL HHS AND DART ASSISTANCE TO JAPAN IN FY 2011			\$6,125,337

¹ USAID/OFDA funding represents anticipated or actual obligated amounts as of March 16, 2011.

PUBLIC DONATION INFORMATION

- The most effective way people can assist relief efforts is by making cash contributions to humanitarian organizations that are conducting relief operations. A list of humanitarian organizations that are accepting cash donations for earthquake and tsunami response efforts in Japan can be found at www.interaction.org.
- USAID encourages cash donations because they allow aid professionals to procure the exact items needed (often in the affected region); reduce the burden on scarce resources (such as transportation routes, staff time, warehouse space, etc.); can be transferred very quickly and without transportation costs; support the economy of the disaster-stricken region; and ensure culturally, dietary, and environmentally appropriate assistance.
- More information can be found at:
 - USAID: www.usaid.gov
 - The Center for International Disaster Information: www.cidi.org or (703) 276-1914
 - Information on relief activities of the humanitarian community can be found at www.reliefweb.int

USAID/OFDA bulletins appear on the USAID web site at http://www.usaid.gov/our_work/humanitarian_assistance/disaster_assistance/

Subject: Sen Gillibrand's requesting GI-199 (Seismic Risk) briefing

Just received call from Ben Rosenbaum from Sen. Gillibrand's office. They'd like a briefing on the GI-199 paper. They're contacting EPW to see about broader participation.

Yeah, we're on a mission from God. I spoke with Becky and I guess I'll be back. OPS Center duty. My last memories of that place are when Diaz decided to have a mock drill on a beautiful Saturday afternoon as he was going out the door. I spent the day there with Betsy and Diaz' staff. I look forward to the powdered doughnuts and strong coffee. Maybe Annie will call since I heard of her midnight escapade. Please make sure I have a list of all the new Hill Committee staffers.

Hey, I heard we're getting the band back together. I think she's going to see if Betsy wants to come back too!!! Just kidding. You will probably get a call from Dawn Powell.

If I thought I could be of some assistance to you and Becky I would do it. Personally, I don't know what I could do to help. After TMI, very near where I grew up, I made a conscience effort to avoid working with reactors so I concentrated on the back end of the fuel cycle. I'm also quite sure that Amy would not take kindly to my being involved. I guess I would have to have a pretty defined role as to what I would be doing. Again, I would consider doing it to help you two and for no other reason, other than money, of course.

I hope you aren't working 24/7.

Becky wanted me to ask you if you would be willing to come back as a rehired annuitant to help us out during this situation. Seriously. I told her I did not think you would, but I would ask. Let me know.

Subject: RE: REMINDER: Conference call on Japan earthquake/tsunami disaster Wednesday, March 16, at 2 pm and daily thereafter

We are changing the phone system for the conference call for tomorrow, March 16. The notice has been sent to Congressional staff with a new dial-in number for the 2:00 pm conference call, shown below. Please note that we have arranged for a pre-conference call with the interagency briefers at 1:30 with a different "leaders" dial-in number -- (877) 334-8037 -- so that we may discuss the fast moving events related to this emergency and identify the speakers for the call. Because of limited lines, please have people in your agencies call in from one line using a speaker phone that can

BC/396

be muted when others are speaking. It would be helpful to receive the names and titles of each agency's briefer tomorrow morning. Thank you.

You are invited to join daily conference calls to discuss:
Humanitarian Assistance Needs in Japan and the U.S. Government's Response

with

Nancy Lindborg

Assistant Administrator

Bureau for Democracy, Conflict, and Humanitarian Assistance

U.S. Agency for International Development

and

Representatives from other U.S. Government agencies engaged in this effort, including the Departments of State, Defense, Energy, Health and Human Services, Homeland Security, Nuclear Regulatory Commission, and others

Thursday, March 17, at 2:00 p.m.

Participant call-in number: **(877) 380-6801**

Speaker call-in number: **(877) 334-8037**
