Ms Cindy Bladey
U.S. Nuclear Regulatory Commission
Washington, DC 20555-0001

Dear Ms Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

I am appalled that opening this old plant with a history of issues would even be considered. This plant is in a densely populated area with limited access to evacuation routes. There are so many people living in this general area that if there was a Fukushima type disaster the roads would be so severley congested there would be no way out. I live in this area, there are many families with young children in the area and neighboring areas due to all the new construction and children are one of the most susceptible to life long health problems and cancers from radiation incidents like these. Its time to pull the plug permanently on this antiquated plant before a disaster happens here... I can not and will never support anyone that supports re opening this plant. This is an accident waiting to happen, that will cause irreversible damage to human life, the landscape, the economy.. There is no upside worth the risk here... They disassembled the plant in Long Island NY, we can do the same here. Thanks for your time regarding this VERY important matter..

Thank you for your attention to these concerns.

Linda Nitti
