General Comment

The San Onofre plant Generator #2 should be shut down until the root cause of the failure is discovered and corrected, so that the same failure cannot occur again. Should the root cause be found to be a fundamental problem in design, the plant should be shut down permanently.

I have sailed in the waters off San Onofre. I would hate to see those beautiful waters polluted by nuclear waste. Yes, I know. ...but the people in Japan didn't know that their water was going to be polluted, either.
