General Comment

I write to ask that the NRC reject Southern California Edison's narrow license amendment request and no significant hazard consideration. These requests from Edison would pave the way to restart before a full adjudicated license amendment hearing with testimony from independent experts was held. This license amendment seeks to remove the critical licensing issues from the context in which it is requested – to pave the way for restarting a severely damaged reactor without understanding the cause and without fixing the problems. It further fails to address significant safety and licensing issues, such as impacts on vital safety systems. Given the extensive damage at both reactors and tremendous public concern, Southern California Edison should not be attempting fast-track a restart decision. The health and safety of Southern Californians must come first.
