General Comment

Hello, my name is Alexis Habib and I am fifteen year old living in Carlsbad Ca, United States. I live only about 25 miles away from San Onofre. I do not believe it should be restarted. One, it is already an old reactor, about thirty to forty years old. Two, it is such a big risk for such little return. The two new machines that were installed were supposed to last thirty years, they lasted eighteen months. If they didn't check the pipes, we would of had a big problem on our hands. I don't trust the people at San Onofre to have the best interest of the world in mind. If it has a meltdown, the radiation will stay in the world for hundreds of thousands of years. And frankly, I don't want that to happen the the environment that I, and all life, was made in. The more nuclear reactors we have, the more chance for another mistake to be made, and more chance for a meltdown. Third, I know this is a bit selfish, I don't want to have to move from the home and the area that I have grown up in. I would never be able to see my house again, I would be separated from all my friends, all the memories of my early years tainted with pain and anger at the people that "wanted to see what would happen". I very much doubt that you would want to move out of your house and start over from scratch in an unfamiliar area. I jut don't want my future ripped away from me, or anyone. Finally, we have been getting along fine without the "needed" power form San Onofre. For the past two years we have only had one power out, and that was from human error. Why take the risk? Why ruin the only planet we have? I beg of you to not restart San Onofre. Thank you for taking the time to read or consider this.
