Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

The safety of millions of Southern California residents is at serious risk. To allow this "license amendment" to proceed is a failure of the required oversight that protects us from the conglomerates that make decisions based on stock holders bank accounts over the public welfare, the future of our children and the land we call home.

Thank you for your attention to these concerns.

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

When San Onofre was built, the area around it was sparsely inhabited. Now, with the massive amount of people living within its radius, I just don't think you can be too careful. Once there is a problem, you affect SOOOOO many innocent people. Let us find a safer alternative, and/or scale back our use of power, but to pose any risk whatsoever to such a dense population seems way to risky.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you so much!!

Thank you for your attention to these concerns.

It is so important to listen to those who live near San Onofre - and all those who would be affected by the strong possibility of oversight and pushing an old facility to do more than it logically should. Consider the earth and the inhabitants who cannot speak for themselves.

Please - I beg you to thoroughly and thoughtfully make this decision as if your family was at risk.

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time.

Thank you for your attention to these concerns.

SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

I retain grave concerns regarding the use of nuclear power because it poisons our environment. The mining of uranium is dangerous to life, the well-being of the earth and the general health of its inhabitants. The terrible accidents at Three Mile Island and level 7 nuclear disasters at Chernobyl, Ukraine and Fukushima Daiichi, Japan make it clear that the continued use of nuclear technology is totally unfeasible. I support the call for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process, taking all of the above issues into consideration.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

Thank you for your attention to these concerns.

San Onofre currently stores more than 1,400 tons of spent nuclear fuel at its coastal site that have nowhere else to put it just waiting for a Tsunami to spread it all over the place. Southern California Edison should not be allowed to restart any of its reactors that will add more nuclear waste - per the Los Angeles times 4/4/2013 "San Onofre is destined to follow in the footsteps of nine former nuclear power plants (including two in California) whose reactors are long gone, but whose waste remains stranded on site."

Thank you for your attention to these concerns.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

I don't see the logic of weakened license requirements when we have the very recent example of the continuing Fukushima disaster. We don't even know the full impact of Fukushima yet. It's still happening.

San Onofre is on top of a recently discovered geologic fault and is surrounded by many more. In my opinion the plant should be decommissioned and some alternative energy source like wind, solar, wave action, heat pump.... something much safer built on that land.

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

I used to surf San O. In the 60's as a teen-ager. The idea of an nuclear accident at this site is particularly galling. And of course there is the matter of perhaps 15 million people in Southern California being effected.

Thank you for your attention to these concerns.

Nuclear power is no longer a viable source of power in this country, what with what we know and continue to find out. By itself, the waste that is produced and its disposal is a huge issue, let alone the plants themselves and their laundry list of safety issues. Shut it down, and put the resources into renewables.

Thank you for your attention to these concerns.

I believe it was President Nixon that actually overrode the California citizens in authorizing this plant in the first part. It sits between Los Angeles and San Diego, not to mention it is right on the Pacific Ocean! Our citizens deserve to have a full impartial inspection of the entire facility, the United States can NOT afford a Chernobyl or Fukushima.

Thank you for your attention to these concerns.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

The generators failed. There needs to be a full and open investigation. Given the fact that scores of lives are lost when inspections and regulations done improperly, or are fast-tracked.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

As to, also agreeing to the 2 paragraphs preceding mine, would Some One edit 1st paragraph;

"We ask that the Nuclear Regulatory Commission (NRC) to, not allow the restart of the San Onofre Nuclear Power Plant, before the Commission Completes a COMPREHENSIVE investigation, AND provides full opportunity for the Public's participation, including independent expert testimony's."

Thank you for your attention to these concerns.

It is time to continue green energy in CA. San Onofre is old and a dangerous plant-it is time to learn from what happened in Japan. An earthquake in that area would be devastating to the MILLIONS of people living near and around a decrepit plant that has the potential to kill and injure so many people. WAKE UP AND DO WHAT IS BEST FOR US ALL!!!
Close the plant down!

Thank you for your attention to these concerns.

I very well understand that the NRC licensing process is considered onerous by Nuclear power operators and owners; from the point of view of residents and customers there is another term which describes the process far better: SAFE.

The regular licensing process should proceed without shortcuts; no to any contemplated license "amendment" permitting an early restarting of this compromised facility.

I urge the NRC Commissioners to mandate the full licensing process be followed before San Onofre is permitted to restart at any level.

Thank you for your attention to these concerns.

What's the hurry? You are here to protect the public from a potential disaster before it happens. They haven't fixed the problem that led to the shut down. Edison wants to get back to making money, we get that, but that is no reason to put our lives and our environment at risk. Those of us who live close to the reactor do not want it to go on line until we are sure it is safe.

Thank you for your attention to these concerns.

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

We need to look for other forms of energy instead of exposing ourselves and our planet to this danger.

Thank you for your attention to these concerns.

Washington, DC 20555-0001

Subject: Docket ID NRC20130070. My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Dear NRC,
SAFETY FIRST! Recent history has proven sce's assurances cannot be relied upon. Profit is their primary motive. Please tell them NO.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

I live only 3 miles away from the nuclear power plant and am uncomfortable with the thought of it being used again. With the recent nuclear disaster in Japan my senses are heightened to the extent of the pollution and radiation exposure a meltdown could release.

Thank you for your attention to these concerns.

California and The United States of America cannot afford another nuclear accident like 3 Mile Island, Chernobyl, Fukushima, or Rocketdyne [childhood friend died of Heart Cancer in the 1980's as a result of meltdown in 1958, I am SURE].

Besides, there still is NOWHERE to safely store spent fuel rods since the nuke industry STARTED. I think I am suffering thyroid problems from effects of Fukushima meltdowns here in Los Angeles already. Please close San Onofre now and for ALL TIMES before there is another accident that spreads nuclear radiation over Southern California and totally ruins this part of the country for living, working or farming And the US Economy.

Thank you for your attention to these concerns.

SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

With the Fukushima disaster and the increasing efficiency and utility of renewable energy sources as its background, it seems to me wholly illogical that the NRC would grant fast-track permission to reopen San Onofre. The NRC can choose either the path dictated by its understood mission of ensuring that nuclear power helps to meet the nation's energy needs only to the extent that it is safe and necessary, or that dictated by a utility's desire to maximize its profits. I hope that the public servants at the NRC will continue to serve the public by choosing the former.

Thank you for your attention to these concerns.

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns,
Tippi and Neal Dobrofsky
Santa Monica, Ca 90403

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

I know you are probably under pressure from special interest groups who stand to benefit substantially from restarting this catastrophe waiting to happen, and probably even being offered personal remuneration for helping it along. But we the people do not want this highly suspect, extremely dangerous, and endless problem of what to do with the waste around anymore. Do the right thing for us. Quash this bad idea now.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

I have one word to add to this FUKUSHIMA.

Then two more words: OUR FUTURE?

Thank you for your attention to these concerns.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

This is crazy. These reactors leak significant amounts of radiation to San Clemente and higher than normal levels are detected as far away as Vista. If there were to be an accident it would force everyone I know from north San Diego to L.A. to move and never return. Whole environments would be completely lost forever (chaparral and coastal sage scrub). Hollywood would be destroyed, the center of the California economy.) Southern California would be unlivable. But you greedy capitalists care more about immediate profit than any of that. Despicable. Stop this madness while you still have souls.

Thank you for your attention to these concerns.

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Don't jeopardize your children or mine.

Do not restart San Onofre prematurely.

Or ever.

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

A full NRC review of San Onofre must be done before it considers a restart of either unit at the station.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

While a "no restart" decision by the NRC would no doubt result in generating capacity shortfalls and rate increases, these costs are well worth it when weighed against the possible effects of other failures at San Onofre.

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

We had the hottest and longest record of temperatures over 100 degrees last summer and we DID NOT NEED the SONGS reactor. Conservation works in California. There is no need to risk the public with a company that cannot be trusted to conduct themselves honestly.

It would only take 1 accident to destroy most of Southern California. I don't need to remind you that California (particularly the southern part) is one of the biggest economies in the world. Any kind of accident at SONGS could cripple the US and world economies instantly.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at SONGS before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed SONGS generators at this time, and to conduct a comprehensive and open review process.

I would even go beyond the Sierra Club and say we should decommission the plant. It is close to its life expectancy and not worth the risk. This is especially true considering the track record of SCE.
