Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

Thank you for your attention to these concerns.  
Mr. Terry Welsh

We are witnessing increasingly troubling evidence of assurances by presumably well-qualified public utility experts in advance of catastrophic events. Fukushima, Japan is but one example. By the simple test of comparing what we have to gain by allowing this evasion of established regulations versus what we risk, all the evidence supports denying Southern California Edison's self-serving efforts.

Thank you for your attention to these concerns.

The San Onofre reactor is too dangerous to be put into operation. And there are so many good alternatives - efficiency and conservation, solar energy, wind energy, wave energy. THOSE are the technologies that we need to pursue.

Please don't continue the threat that San Onofre presents. Keep it shuttered.

Thank you for your attention to these concerns.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

This plant needs to be shut down and we need to focus on clean energy. Nuclear energy is way to dangerous and produce terrible toxic waste. How can that be good??????

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

The dangers of radiation are so severe, we cannot afford to jeopardize the safety of the people and beyond. We are no good at storing radiation, the seas are rising, and it's deadly enough just by sitting there.

Thank you for your attention to these concerns.

I live in San Clemente CA, just down the road from San Onofre, and there is no way out in the event of a nuclear fallout. Even now, traffic is at a standstill on the freeway in some parts of San Clemente, 7 days of the week, at almost every hour of the day.

Please do not restart the nuclear power plant.

Thank you for your attention to these concerns.

The standard for operating any potentially life threatening equipment is that it is in good working condition. The problem with nuclear plant failures is the lifespan of the damage far exceeds our own. Holding a "company" liable after the fact is a moot point.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

I remember when that place was built. And I am almost 74. Altho less than 74 I know it is past retirement age. Let it retire. Remember what happened in Japan.

This place is surrounded by people. It would be a much bigger population that would be nuked than at Fukushima! I live in Pomona and millions live between me and San Onofre.

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Solar, wind and geothermal offer safe, affordable options. Germany had the good sense, after the Japan nuclear disaster to close their plants permanently. Let's do the same.

Thank you for your attention to these concerns.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process. The results of a failure would mean that I and my family would be at risk as well as hundreds of thousands more who live in the Southern California area. We cannot accept even the possibility of a failure. We live in one of the largest earthquake zones in the world, and I would think that Japan's nuclear reactor story would give us pause about lowering any standards in our own industry. We cannot risk public safety to give SCE a break.

Thank you for your attention to these concerns.

SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

I live in the area that would become devastated in the event of a nuclear "accident" or "act of God" at the SONGS plant. I also own rental property that is even closer (in Dana Point). This directly affects me and my family.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator. It is situated on a beautiful beach...why can't it be used as a tidal power generation plant or solar collector site? If a Solar Power Plant has a spill, all we get is a sunny day!!

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

It is absolutely necessary that we consider the current, apparently unsolvable troubles at Fukushima Daachi. The radiation is now moving toward California. A congressional hearing as to how to deal with the crises is being called. We cannot afford to ignore the dangers. In Japan, it has become clear that the company cannot deal with the problem. Neither can the government. We are not confident that anyone can. Let us not have a Fukushima here. The way San Onofre is set up, it is a Fukushima waiting to happen. It is absolutely necessary that there be a full review by the NRC of conditions at San Onofre, that exactly meet everyone's concerns before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a full, comprehensive and open review process. I also ask you to extend the review process to international experts and advisors as a failed plant is no longer only a local issue.

Thank you for your attention to these concerns.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Please DO NOT reopen the San Onofre nuclear power plant. I live within the danger zone; its radioactive waste will remain deadly for centuries. What arrogance to think we can do what we want to future generations. Enough. Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Believe it or not, my husband and I both worked at SONGS back in the 1980's. We enjoyed our jobs and our coworkers. We were treated well and were paid very well.

But even as we went there each day to work, I was always aware of the fact that we were exposing ourselves to the very real possibility of danger. "What if there was an earthquake or tidal wave right now?" "What if the Russians launch an attack on the West Coast?" I worried about ourselves there at the plant, and for the nearby community of San Clemente - and farther. Who knew how far-ranging the consequences could be?

But it didn't take any of these catastrophic events to set the station on a course for closure. A leak within the plant was serious enough to shut it down. This only serves to illustrate how problematic nuclear energy can be.

SCE understandably wants to get SONGS up and running again. But there is too much at risk to fast track the approval. We've got to be absolutely sure that the process has been thoroughly reviewed.

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

As a resident of San Clemente and Realtor, I know this nuclear power plant is a huge concern. To restart this plant is a disaster waiting to happen. Please stand up for our rights as our elected official and shut down any action to restart San Onofre.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Dear Ms. Cindy Bladey,

It would be ....A MAJOR BLUNDER to restart San Onofre.

The evidence points to the misguided judgement to do so.

I STRONGLY urge you not to approve of such an action, for the benefit

of all who would surely, at some point, be disastrously affected by

the outcome !!!!! Think Fukushima !

SINCERELY yours, Marissa Rubin, M.A., ATR

Thank you for your attention to these concerns.

Just how stupid does the Nuclear Regulatory Commission think the people of California are to be fooled into thinking that ANY regulatory agency at the Federal level is doing anything for the "public good"? Looks like Southern California Edison has its own apologists on the NRC to shove the San Onofre restart down our throats. Can't wait for the mushroom cloud to appear on the horizon & realize my own government did it to me!

Thank you for your attention to these concerns.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

It is my understanding, that the NRC never evaluated the changes that were made to update the tubing from Mitsubishi 2 yrs ago, which replaced the original tubing, which had survived for 20+yrs. The fact, that it failed in less than 2yrs, should indicate serious design problems!

Secondly, there is no plan in place for major evacuations in case of a serious meltdown at San Onofre.

Considering SCE's & the NRC's history on this, I would give serious consideration to deactivating the plant.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Southern California has numerous other options for electric power that actually is clean and safe why should life be endangered for the profits of a few old men?

Sorry to not have any compassion for your wealth needs but there's too much at stake.

Socal Edison profiteers, clean up your act!

Thank you for your attention to these concerns.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Also, after the Fukushima disaster in Japan, it needs to be noted that San Onofre is on the coast in a relatively active earthquake zone. In addition, the area around it is being built up so any incident at that plant is more likely to affect both of the two major metropolitan areas of Los Angeles and San Diego than when it was first built.

Thank you for your attention to these concerns.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

I live 10 miles from San Onofre and I am VERY concerned. I do NOT trust the operators at all. ALL they care about is profits, NOT my Safety.

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

There is cause for concern whenever any agency or entity whose operations could have a potentially devastating effect on the surrounding population attempts to circumvent the procedures in place for its review. I believe the public deserves the opportunity for a full investigation and review.

Thank you for your attention to these concerns.

**This Plant Needs To Be Retired!!**

This facility is over 25 years old and has outlived its lifespan of safety. What kind of madness is it to operate it at only 70% of capacity. This should be a RED FLAG automatically as to its safety. Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

There's just no good or compelling reason to go nuclear, when we have better alternatives. We have untapped solar, wind and geothermal resources in plentiful supply in California. Let's tap into those instead, and spare ourselves the agony of a Fukushima-Daiichi type meltdown here that simply does not have to happen.

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a &quot;preliminary finding&quot; that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: &quot;The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature.&quot;

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called &quot;license amendment&quot; that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

There has never been a better time to admit that we cannot control nuclear power plants. From previous disasters in the U.S. to Russia, to Japan, it is clear that this source of energy is an illusion.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

I've been following this issue since the 1970s when we were promised that "the industry" would solve the radioactive waste problem. They have not done so and I have seen nothing to demonstrate that they have made any progress whatsoever in that direction after 40 years!

It is simply dangerous to continue creating all of the dangerous waste and now it the time to stop.

Thank you for your attention to these concerns.

Subject: Docket ID NRC20130070, My Comments to the NRC: Do Not Restart San Onofre Unit 2

Dear Cindy Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

We are vigorously opposed to using the power of an atomic bomb to boil water.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Further, after hearing both sides of the issue recently, I am against the restart of the San Onofre Nuclear plant for ANY length of time as it is unsafe and can cause instant death and rampant cancers to millions of Southern Californians.

Thank you for your attention to these concerns.
