Lisle, IL 60532

U.S. NRC License #13-03226-04
Control # 580047

Dear Mr. O'Dowd:

With reference to your telephone call yesterday the following is submitted:

St. Mary's Radiation Oncology Center, 3801 Bellemeade Avenue (on St. Mary's Campus) was closed and all the equipment including 2 linear accelerators and Ir-192 HDR unit were transferred to the Oncology Hematology Associates Cancer Center. However, these 18 MV linear accelerators do not have any depleted Uranium.

St. Mary's Medical Center had operated Radiation Therapy Department in the hospital basement which had a 6MV Linear accelerator containing depleted Uranium. The Department was closed in 1988 and as far as I can recollect it was obtained by a third party vendor. The depleted Uranium inadvertently was never deleted from the NRC license and had continued to be carried on all subsequent renewals. I have NRC license records only up to January 4, 1995.

Please contact me if you have any further questions. I will be out of the country between April 18 - May 8, 2013.

Thanks for your cooperation.

Sincerely,

S. M. Shah

Saiyid M. Shah, Ph.D
Radiation Safety Officer
