Ms Cindy Bladey  
U.S. Nuclear Regulatory Commission  
Washington, DC 20555-0001

Dear Ms Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process. The results of a failure would mean that I and my family would be at risk as well as hundreds of thousands more who live in the Southern California area. We cannot accept even the possibility of a failure. We live in one of the largest earthquake zones in the world, and I would think that Japan's nuclear reactor story would give us pause about lowering any standards in our own industry. We cannot risk public safety to give SCE a break.

Thank you for your attention to these concerns.

Potential radioactive contamination is an extremely serious matter. There is no room for error, so every effort to ensure our safety must be made without fast track short cuts. Anyone who thinks otherwise should have a conversation with the people of Fukushima, Japan.

Thank you for your attention to these concerns.

SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

I retain grave concerns regarding the use of nuclear power because it poisons our environment. The mining of uranium is dangerous to life, the well-being of the earth and the general health of its inhabitants. The terrible accidents at Three Mile Island and level 7 nuclear disasters at Chernobyl, Ukraine and Fukushima Daiichi, Japan make it clear that the continued use of nuclear technology is totally unfeasible. I support the call for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process, taking all of the above issues into consideration.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

California and The United States of America cannot afford another nuclear accident like 3 Mile Island, Chernobyle, Fukishima, or Rocketdyne [childhood friend died of Heart Cancer in the 1980's as a result of meltdown in 1958, I am SURE].

Besides, there still is NOWHERE to safely store spent fuel rods since the nuke industry STARTED. I think I am suffering thyroid problems from effects of Fukishima meltdowns here in Los Angeles already. Please close San Onofre now and for ALL TIMES before there is another accident that spreads nuclear radiation over Southern California and totally ruins this part of the country for living, working or farming And the US Economy.

Thank you for your attention to these concerns.

SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

I live in the area that would become devastated in the event of a nuclear "accident" or "act of God" at the SONGS plant. I also own rental property that is even closer (in Dana Point). This directly affects me and my family.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator. It is situated on a beautiful beach...why can't it be used as a tidal power generation plant or solar collector site? If a Solar Power Plant has a spill, all we get is a sunny day!!

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process. The people of California don't need this very probable catastrophe to be restarted. Nothing serious has happened yet. Why tempt fate. Don't allow it to happen to us.

Thank you for your attention to these concerns.

Ms Cindy Bladey  
U.S. Nuclear Regulatory Commission  
Washington, DC 20555-0001

Dear Ms Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Potential radioactive contamination is an extremely serious matter. There is no room for error, so every effort to ensure our safety must be made without fast track short cuts. Anyone who thinks otherwise should have a conversation with the people of Fukushima, Japan.

Thank you for your attention to these concerns.

California and The United States of America cannot afford another nuclear accident like 3 Mile Island, Chernobyle, Fukishima, or Rocketdyne [childhood friend died of Heart Cancer in the 1980's as a result of meltdown in 1958, I am SURE].

Besides, there still is NOWHERE to safely store spent fuel rods since the nuke industry STARTED. I think I am suffering thyroid problems from effects of Fukishima meltdowns here in Los Angeles already. Please close San Onofre now and for ALL TIMES before there is another accident that spreads nuclear radiation over Southern California and totally ruins this part of the country for living, working or farming And the US Economy.

Thank you for your attention to these concerns.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

I don't see the logic of weakened license requirements when we have the very recent example of the continuing Fukushima disaster. We don't even know the full impact of Fukushima yet. It's still happening.

San Onofre is on top of a recently discovered geologic fault and is surrounded by many more. In my opinion the plant should be decommissioned and some alternative energy source like wind, solar, wave action, heat pump... something much safer built on that land.

Thank you for your attention to these concerns.

Dear Ms Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

It needs to not only consider the plant itself, but also the factors relating to safety that could make any accident worse: the inadequate evacuation routes, the too low tsunami wall, the consequences to home values just being too close to this potential danger, possible destruction of livable area for homes and businesses, several earthquake faults nearby and possible terrorist activity. The economy of Orange County and even the Los Angeles area could be threatened if there were a major incident...Even some of the employees have concerns about the plant's safety.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process. We want to continue to live and work in our beautiful Orange County without feeling that we have to worry about a major danger that could ruin our lives and livelihoods! We don't want to have to evacuate permanently like they have near the Fukushima plants due to lack of concern for safety! Safety should be number one if we want to preserve our vibrant Orange County economy and way of life!

Thank you for your attention to these concerns.

SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

I know you are probably under pressure from special interest groups who stand to benefit substantially from restarting this catastrophe waiting to happen, and probably even being offered personal remuneration for helping it along. But we the people do not want this highly suspect, extremely dangerous, and endless problem of what to do with the waste around anymore. Do the right thing for us. Quash this bad idea now.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

This license review process was created for a reason!!! It just doesn't make sense to ignore these safeguards!! The responsibility and liability will fall on you if something goes wrong.

Thank you for your attention to these concerns.

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

With the Fukushima disaster and the increasing efficiency and utility of renewable energy sources as its background, it seems to me wholly illogical that the NRC would grant fast-track permission to reopen San Onofre. The NRC can choose either the path dictated by its understood mission of ensuring that nuclear power helps to meet the nation's energy needs only to the extent that it is safe and necessary, or that dictated by a utility's desire to maximize its profits. I hope that the public servants at the NRC will continue to serve the public by choosing the former.

Thank you for your attention to these concerns.

California and The United States of America cannot afford another nuclear accident like 3 Mile Island, Chernobyle, Fukishima, or Rocketdyne [childhood friend died of Heart Cancer in the 1980's as a result of meltdown in 1958, I am SURE].

Besides, there still is NOWHERE to safely store spent fuel rods since the nuke industry STARTED. I think I am suffering thyroid problems from effects of Fukishima meltdowns here in Los Angeles already. Please close San Onofre now and for ALL TIMES before there is another accident that spreads nuclear radiation over Southern California and totally ruins this part of the country for living, working or farming And the US Economy.

Thank you for your attention to these concerns.

Dear Ms Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

I live near the impending nuclear disaster called, San Onofre. I've visited the plant many times over the years. We, the residents, worry constantly about when the melt-down is going to happen. Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

Given the problems with any nuclear powered device, one less power plant is the step in the right direction. The Earth is trying to recover from Chernobyl, Three Mile Island and now Fukushima please don't add San Onofre to this list.

Thank you for your attention to these concerns.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

I retain grave concerns regarding the use of nuclear power because it poisons our environment. The mining of uranium is dangerous to life, the well-being of the earth and the general health of its inhabitants. The terrible accidents at Three Mile Island and level 7 nuclear disasters at Chernobyl, Ukraine and Fukushima Daiichi, Japan make it clear that the continued use of nuclear technology is totally unfeasible. I support the call for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process, taking all of the above issues into consideration.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

Thank you for your attention to these concerns.

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

When San Onofre was built, the area around it was sparsely inhabited. Now, with the massive amount of people living within it's radius, I just don't think you can be too careful. Once there is a problem, you affect SOOOOO many innocent people. Let us find a safer alternative, and/or scale back our use of power, but to pose any risk whatsoever to such a dense population seems way to risky.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you so much!!

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Too much is at stake to restart Unit 2 without intensive, transparent and full review. Has the Fukushima nuclear plant experience taught us NOTHING about the severe and lingering risk of a nuclear plant located on the coast? Especially a troubled, mal-functioning plant? Proceed -- if at all-- with full and necessary caution! Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

U.S. Nuclear Regulatory Commission  
Washington, DC 20555-0001

Dear Ms Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

The standard for operating any potentially life threatening equipment is that it is in good working condition. The problem with nuclear plant failures is the lifespan of the damage far exceeds our own. Holding a "company" liable after the fact is a moot point.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

Thank you for your attention to these concerns.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process.

This is literally like a time bomb waiting to go off. A nuclear site should never have been located here in the first place. The lives of millions of people living in the area are at risk. Close this very dangerous facility permanently. Have we forgotten the ongoing disaster in Japan?

Thank you for your attention to these concerns.

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

I support not restarting it ever! The biggest problem from the Japanese earthquake was the nuclear power plant, and they still cant contain the problem. California has earthquakes as well that are just as powerful. Southern California is due for a big one any time now. Why on earth would you think its ok to turn on the San Onofre Nuclear Power source????????????????????

Humans, who think they rule the world, do yourselves, and us all a favor, STOP MEDDLING WITH THE EARTH!!!!!!!!!!!!!!!!!!!!!!!!!!!!  
I am a human, citizen, law abiding, good person, and I live near San Onofre Nuclear plant, and I DO NOT WANT IT TURNED ON...EVER!!!!!! I'd rather go without power all together! Thank you very much~!!!!!!!!!!!!

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full choice by the NRC to request that it not be turned on at San Onofre or a restart of either failed generator.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators, and to conduct a comprehensive and open to the public review process.

Thank you for your attention to these concerns.

Potential radioactive contamination is an extremely serious matter. There is no room for error, so every effort to ensure our safety must be made without fast track short cuts. Anyone who thinks otherwise should have a conversation with the people of Fukushima, Japan.

Thank you for your attention to these concerns.

Dear Ms Bladey,

The comments that follow are regarding Docket ID NRC20130070.

We ask that the Nuclear Regulatory Commission (NRC) take no action that could lead to a restart of the San Onofre nuclear power plant before the Commission completes a comprehensive investigation and provides full opportunity for public participation and independent expert testimony.

Southern California Edison (SCE) is attempting to shortcut the license review process by calling on the NRC to make a fast-track restart decision. We and other environmental groups have joined with U.S. Senator Boxer and U.S. Representative Markey in urging the NRC not to follow such a course.

We were deeply disturbed when on April 10 the NRC staff disregarded numerous statements of concern and announced a "preliminary finding" that a San Onofre restart at 70% power posed no significant safety risk.

We join a wide range of concerned citizens and public officials in believing that a full and transparent review of the failed San Onofre generators is essential before the NRC considers any potential restart at either partial or full power of the failed generator.

We support Senator Boxer, Chair of the Environment and Public Works Committee, who stated on April 10, 2013: "The NRC staff proposal, which could pave the way for the restart of the San Onofre nuclear power plant before the investigations of the crippled plant are completed, is dangerous and premature."

Given the recent failure of tubes that carry radioactive water, speeding restart of San Onofre through a so-called "license amendment" that shortcuts procedures is totally inappropriate. SCE's request to weaken its license requirements was made despite evidence showing that there could be a significant hazard from the operation of the deficient steam generators.

Given the troubled history and current condition of the plant and the raised level of public concern, the public deserves a full review by the NRC of conditions at San Onofre before it considers a restart of either failed generator.

It needs to not only consider the plant itself, but also the factors relating to safety that could make any accident worse: the inadequate evacuation routes, the too low tsunami wall, the consequences to home values just being too close to this potential danger, possible destruction of livable area for homes and businesses, several earthquake faults nearby and possible terrorist activity. The economy of Orange County and even the Los Angeles area could be threatened if there were a major incident...Even some of the employees have concerns about the plant's safety.

I support the call by the Sierra Club for the NRC to block any restart of the failed San Onofre generators at this time, and to conduct a comprehensive and open review process. We want to continue to live and work in our beautiful Orange County without feeling that we have to worry about a major danger that could ruin our lives and livelihoods! We don't want to have to evacuate permanently like they have near the Fukushima plants due to lack of concern for safety! Safety should be number one if we want to preserve our vibrant Orange County economy and way of life!

Thank you for your attention to these concerns.
