Good morning Tom and Nate;

Sorry not to CC you both initially on this response. I will work with John and the contractors to be sure that John is not feeling like we are having a non-productive trip. I will also evaluate carefully with the contractor to determine if their work can be completed remotely rather than on site.

John, thank you for your insight on this. I will discuss your concerns with the contractor to be sure that the visit would be beneficial and have well formulated questions. The contractor has just completed a thorough acceptance review and has continued to work on RAI's. It would be our intention to come prepared seeking information to answer questions/gather information identified during the initial review and the continued efforts we are making to develop our Environmental Assessment.

After I have a chance to discuss your concerns with the contracting experts I will get back in touch and we can make an informed decision on the site visit.

Have a great morning,

Jean

Jean - To be honest, we are having trouble understanding why we are paying to have a hydrologist come walk around on the surface of the site. How will it benefit their understanding of the subsurface? We would prefer waiting until the hydrologist has done a careful review of the application so that a face to face with our hydrologist could serve to answer well formulated questions...

Cameco needs to understand the purpose for the hydrologist's visit before we will agree to pay for their time and travel expenses.

Good morning John,

I do not yet have all of the detailed needs of this trip but thought I would fill you in on our travel plans. We plan to leave the DC area on Monday, spending this night in Rapid city and then driving to the site Tuesday in the early AM. Tuesday and Wednesday nights we are currently planning on staying at Fort Robinson. Hopefully while there we will meet with the SHPO and look at some of the historic sites and documentation for the area. I know that the Hydrologist would like to have a tour of the CB sites, I think much like we had in June. Hopefully the weather will cooperate, as I have specific details on what he would like to see I will share. I believe that we should be able to see what he is desired in 1- 1.5 days, but Larry can provide the final word as details of their needs are available. As soon as I have the details I will forward those to you so that Larry can make plans for the tours.

Thank you again for accommodating our visit, I look forward to seeing you all in October.

Jean
