Senator Barbara Boxer
112 Hart Senate Office Building
Washington, DC 20510

Dear Senator Boxer:

On behalf of the 345 members of the El Monte/South El Monte Chamber of Commerce, I am writing in support of Southern California Edison's (SCE) plan to safely restart and operate Unit 2 of the San Onofre Nuclear Generating Station (SONGS) after the Nuclear Regulatory Commission's (NRC) technical and scientific review that it is safe to do so

As part of the Chamber's recently adopted Public Policy Platform, we support "safe, high quality, reliable and cost effective sources" of power that encourage and promote conservation. The generation capacity of SONGS is vital to that goal, not only for its clean, emission-free electricity, but also because its baseload generation is critical in complementing the variation in electrical output from renewable sources of generation, such as wind and solar. If California is to achieve its Renewable Portfolio Standard (RPS) of 33 percent of electricity from renewable sources by the year 2020, stable generation such as provided by SONGS will be critical.

As you know the California economy continues to face an uphill climb out of the recession and our member businesses struggle with increasing costs every single day. If SONGS remains offline, it is clear to us that other generation resources and construction of transmission lines throughout our region will be necessary. This will result in time-consuming and costly regulatory processes and inevitably higher costs for business customers. Our businesses that have managed to survive the recent economic downturn can ill afford another hit to their bottom line.

For more than 40 years, SCE has a proven track record of operating SONGS and has never been closed down for a safety violation. Our Chamber encourages the NRC to complete its review without unnecessary delay and believes that SCE should be allowed to operate SONGS again.

Sincerely,

Ken Rausch
