Attachments: Question on page 24 of 53.pdf

Don,

Please see the attached page markup. Dan needs you to explain:

(1) the relationship in between shear wall column P7, P4, etc. to the SFP column 17 to 23 and P to W? (Yellow Highlight),

(2) missing Value (Green Highlight), and

(3) below Table, foot note *SSE Max. Moment ($IR = 1.111$). This interaction ratio (IR) is unacceptable (need to see a conservative reanalysis [method] that has an IR below unity.

Thanks,
John
