**SUBJECT:** CLINTON POWER STATION; TEMPORARY INSTRUCTION 2515/186,  
"INSPECTION OF PROCEDURES AND PROCESS FOR RESPONDING  
TO POTENTIAL AIRCRAFT THREATS"; INSPECTION REPORT  
NO. 05000461/2013406

Dear Mr. Pacilio:

On June 13, 2013, the U.S. Nuclear Regulatory Commission (NRC) completed an inspection at your Clinton Power Station using Temporary Instruction 2515/186, "Inspection of Procedures and Processes for Responding to Potential Aircraft Threats." The enclosed inspection report documents the results of the inspection, which were preliminarily discussed with Mr. B. Tabor and other members of your staff.

The objective of this inspection was to assess the implementation procedures and processes of your Clinton Power Plant that are required by Title 10 of the Code of Federal Regulations (CFR) 50.54(hh)(1), which provides the requirements for responding to a potential aircraft threat. The results from this inspection, along with the results from this inspection performed at other operating commercial nuclear plants in the United States, will be used to evaluate the U.S. nuclear industry's readiness to safely respond to similar events. These results will also help the NRC to determine if additional regulatory actions are warranted.

The inspection examined activities conducted under your license as they relate to the implementation of 10 CFR 50.54(hh)(1), your compliance with the Commission's rules and regulations, and with the conditions of your operating licenses. Within these areas, the inspection involved examination of selected procedures and representative records, observations of activities, and interviews with personnel.

Based on results of this inspection, no NRC-identified or self-revealed findings were identified. However, three security-related observations were identified by the inspector which required additional clarification and attention by the licensee. The observations were of very low safety significance and were determined not to be violations of regulatory requirements.

Enclosure transmitted herewith contains  
Sensitive Unclassified Non-Safeguards  
Information. When separated from enclosure,  
this transmittal document is decontrolled.
