DOCKET NO: 71-9294

SUBJECT: 6/25/13, 11:15AM, CONFERENCE CALL WITH GLOBAL NUCLEAR FUELS-AMERICAS, LLC TO DISCUSS AMENDMENT APPLICATION ON THE MODEL NO. NPC TRANSPORTATION PACKAGE

Participants:	<u>NRC/NMSS/SFST</u>	<u>Global Nuclear Fuels-Americas, LLC</u>
	Drew Barto	Scott Murray
	Huda Akhavannik	John Zino

Staff and Global Nuclear Fuels-Americas, LLC (GNF-A) discussed the amendment application submitted by GNF-A dated May 29, 2013. GNF-A requested amending the certificate of compliance to include particle size restrictions to clarify the homogenous particle size as 1.5 mm. Staff wanted more details on the analysis done that led to this size. GNF-A explained that this size is a result of a study done on the homogeneity of the powder when converting from a wet chemical to dry conversion process. This value was not explicitly called out in the original safety analysis report, however was implicitly used in calculations. GNF-A said that they would add text to the safety analysis report explaining the limit and particle size and include a reference to the study done.
