Subject: Response to U.S. EPR Design Certification Application FINAL RAI No. 572, FSAR Ch. 19, Supplement 2
Attachments: RAI 572 Supplement 2 Response US EPR DC.pdf

Amy,

AREVA NP Inc. provided a schedule for the response to the two questions of RAI 572 on April 12, 2013. Supplement 1 response was sent on June 13, 2013 to provide a revised schedule for the final response to Question 19-365.

The attached file, "RAI 572 Supplement 2 Response US EPR DC.pdf," provides a technically correct and complete final response to Question 19-364. Appended to this file are affected pages of the U.S. EPR Final Safety Analysis Report in redline-strikeout format which support the final response to RAI 572 Question 19-364.

The following table indicates the respective pages in the response document, "RAI 572 Supplement 2 Response US EPR DC.pdf," that contain AREVA NP's response to the subject question.

Question #	Start Page	End Page
RAI 572 — 19-364	2	2

The schedule for a technically correct and complete response to the remaining question is unchanged as provided below.

Question #	Response Date
RAI 572 — 19-365	August 9, 2013

Sincerely,

Dennis Williford, P.E.
U.S. EPR Design Certification Licensing Manager

Subject: Response to U.S. EPR Design Certification Application FINAL RAI No. 572, FSAR Ch. 19, Question 19-364 - STATUS

Amy,

AREVA NP appreciates the feedback provided by NRC staff this afternoon during the public telecon on our advanced response to Question 19-364 which was transmitted to you on June 13th. AREVA will provide a revised schedule for submittal of the final response to this question after further evaluation of NRC staff comments received today.

The schedule for a technically correct and complete final response to Question 19-364 is shown below.

Question #	Response Date
RAI 572 — 19-364	TBD

Sincerely,

Dennis Williford, P.E.

Subject: Response to U.S. EPR Design Certification Application FINAL RAI No. 572, FSAR Ch. 19, Supplement 1

Amy,

AREVA NP Inc.'s provided a schedule for the responses to the two questions of RAI 572 on April 12, 2013.

The schedule for a technically correct and complete response to question 19-365 is changed and provided below:

Question #	Advanced Response Date	Response Date
RAI 572 — 19-365	June 28, 2013	August 9, 2013

The schedule for a technically correct and complete response to question 19-364 is unchanged and provided below:

Question #	Advanced Response Date	Response Date
RAI 572 — 19-364	June 14, 2013	July 18, 2013

Sincerely,

Tom Ryan

Subject: Response to U.S. EPR Design Certification Application FINAL RAI No. 572, FSAR Ch. 19

Amy,

Attached please find AREVA NP Inc.'s response to the subject request for additional information (RAI). The attached file, "RAI 572 Response US EPR DC.pdf," provides a schedule since a technically correct and complete response to the two questions cannot be provided at this time.

The following table indicates the respective pages in the response document, "RAI 572 Response US EPR DC.pdf," that contain AREVA NP's response to the subject questions.

Question #	Start Page	End Page
RAI 572 — 19-364	2	2
RAI 572 — 19-365	3	3

The schedule for technically correct and complete responses to these questions is provided below.

Question #	Response Date
RAI 572 — 19-364	July 18, 2013
RAI 572 — 19-365	July 18, 2013

Sincerely,

Tom Ryan

Subject: U.S. EPR Design Certification Application FINAL RAI No. 572, FSAR Ch. 19

Attached, please find the subject requests for additional information (RAI). An advanced RAI was provided to you on February 8, 2013, and discussed with your staff on March 1, 2013. The advanced RAI was modified as a result of that discussion. On March 8, 2013, you informed us that the advanced RAI is clear and no further clarification is needed and that the RAI does not contain any proprietary information. The schedule we have established for review of your application assumes technically correct and complete responses within 30 days of receipt of RAIs. For any RAIs that cannot be answered **within 30 days or April 12, 2013**, it is expected that a date for receipt of this information will be provided to the staff within the 30-day period so that the staff can assess how this information will impact the published schedule.”

Thank You,

Amy

Docket No. 52-020

**Review Section: 19 - Probabilistic Risk Assessment and Severe Accident
Evaluation**

Application Section: 19

SRSB Branch

Question 19-364:

The staff has reviewed the applicant's response to RAI 19-348 and 19-349 containment closure during Modes 5 and 6 with low water level. The staff has reviewed the new containment closure TS during Modes 5 and 6 which significantly reduces LRF. However, this statement in the Rev 4 TS, it states, "The other containment penetrations that provide direct access from containment atmosphere to outside atmosphere must be isolated on at least one side. Isolation may be achieved by an OPERABLE automatic isolation valve, or by a manual isolation valve, blind flange, or equivalent. Equivalent isolation methods must be approved and may include use of a material that can provide a temporary, atmospheric pressure, ventilation barrier for the other containment penetrations during reduced inventory conditions with fuel in the reactor vessel."

The staff requests information regarding the definition of the word, "equivalent". The staff is concerned that the use of equivalent methods may permit containment penetrations that would not keep the containment closed as defined in GL 88-17. As stated in GL 88-17 Enclosure 3, definition of closed containment, "... that a barrier to the escape of radioactive material is reasonably expected to remain in place following a core melt accident...".

The staff read the Westinghouse Improved TS basis that AREVA submitted regarding "equivalent isolations methods" for containment closure to limit radioactive releases. In this context, Westinghouse's use of "equivalent isolation methods" are intended to limit releases following a postulated fuel handling accident during core alterations occur when vessel level is >23 feet above the reactor vessel flange not a postulated core melt accident.

Response to Question 19-364:

U.S. EPR FSAR Tier 2, Chapter 16, Section 3.9.7, Containment Penetrations, will be revised to delete "or equivalent" from the LCO statement. The Bases for Section 3.9.7 will be revised to conform to the LCO statement and GL 88-17.

FSAR Impact:

U.S. EPR FSAR Tier 2, Chapter 16, Section 3.9.7 and B 3.9.7 will be revised as described in the response and indicated on the enclosed markup.

U.S. EPR Final Safety Analysis Report Markups

3.9 REFUELING OPERATIONS

3.9.7 Containment Penetrations

LCO 3.9.7 The containment penetrations shall be in the following status:

- a. The containment equipment hatch is closed:
- b. One door in each containment air lock is closed; and
- c. Each penetration providing direct access from the containment atmosphere to the outside atmosphere is either:

- 1. Closed by a containment isolation valve or blind flange, or
- 2. Capable of being closed by a containment isolation valve from the Main Control Room before boiling in the core.

APPLICABILITY: MODE 5 with RCS loops not filled, and
MODE 6 with the refueling cavity water level < 23 ft above the top of the reactor vessel flange.

ACTIONS

CONDITION	REQUIRED ACTION	COMPLETION TIME
A. One or more containment penetrations not in required status.	A.1 Initiate action to place containment penetration(s) in required status.	Immediately
	<u>OR</u>	
	A.2 Initiate action to be in MODE 5 with the RCS pressure boundary intact and ≥ 25% pressurizer level.	Immediately
	<u>OR</u>	
	A.3 Initiate action to achieve refueling cavity water level ≥ 23 feet above top of the reactor vessel flange.	Immediately

BASES

LCO

This LCO limits the consequences of postulated loss of residual heat removal event during reduced inventory conditions with fuel in the reactor vessel by limiting the potential escape paths for steam and radioactive material released within containment. The LCO requires containment penetrations to be in one of the following status:

- a. The containment equipment hatch is closed:
- b. One door in each containment air lock is closed; and
- c. Each penetration providing direct access from the containment atmosphere to the outside atmosphere is either:
 1. Closed by a containment isolation valve or blind flange, or
 2. Capable of being closed by a containment isolation valve from the Main Control Room before boiling in the core.

Closure by a valve or blind flange used for containment isolation during power operation meets this specification. Closure by other valves or blind flanges may be used if they are similar in capability to those provided for containment isolation. The OPERABILITY requirements for this LCO ensure that containment closure can be achieved and, therefore, meet the assumptions used in the PRA analysis.

APPLICABILITY

The containment penetration requirements are applicable in MODES 5 and 6 during reduced inventory conditions. In MODES 1, 2, 3, and 4, containment penetration requirements are addressed by LCO 3.6.1, "Containment."

BASES

ACTIONS

A.1, A.2, and A.3

If the containment equipment hatch, air locks, or any containment penetration that provides direct access from the containment atmosphere to the outside atmosphere is not in the required status, action must be initiated to place the containment penetrations in their required status, place the unit in MODE 5 with the RCS pressure boundary intact and \geq 25% pressurizer level, or to increase the RCS water inventory by raising the reactor cavity water level to \geq 23 feet above the top of the reactor vessel flange.

SURVEILLANCE
REQUIREMENTSSR 3.9.7.1

This Surveillance demonstrates that each of the containment penetrations required to be in its closed position is in that position. The Surveillance on the open valves will demonstrate that the valves are not blocked from closing. Also, the Surveillance will demonstrate that each valve operator on the open valves has motive power, which will ensure that each valve is capable of being closed from the Main Control Room.

The Surveillance is performed every 7 days with the unit in reduced inventory conditions. The Surveillance interval is selected to ensure that the required penetration status is maintained during reduced inventory conditions.

SR 3.9.7.2

This Surveillance demonstrates that each CBVS valve actuates to its isolation position on manual initiation. The 24 month Frequency maintains consistency with other similar Protection System instrumentation and valve testing requirements.

The SR is modified by a Note stating that this Surveillance is not required to be met for valves in closed penetrations. The LCO provides the option to close penetrations in lieu of requiring remote actuation capability.
