16.7 INSTRUMENTATION

16.7.3 Meteorological Instrumentation

COMMITMENT The meteorological monitoring instrumentation channels shown in Table 16.7.3-1 shall be FUNCTIONAL.

APPLICABILITY: At all times.

REMEDIAL ACTIONS

CONDITION	REQUIRED ACTION	COMPLETION TIME
A. One or more required Meteorological monitoring channels non-functional.	A.1 Restore non-functional channel(s) to FUNCTIONAL status.	7 days
	<u>OR</u> A.2 Prepare and submit a Special Report outlining the cause of the malfunction and plans for restoring the channel(s) to FUNCTIONAL status.	17 days

TESTING REQUIREMENTS

-----NOTE-----

Refer to Table 16.7.3-1 to determine which TRs apply for each meteorological monitoring instrumentation.

TEST	FREQUENCY
TR 16.7.3.1 Perform CHANNEL CHECK.	24 hours
TR 16.7.3.2 Perform a CHANNEL CALIBRATION.	6 months.
TR 16.7.3.3 Perform a CHANNEL VERIFICATION.	Weekly

BASES

The FUNCTIONALITY of the meteorological instrumentation ensures that sufficient meteorological data are available for estimating potential radiation doses to the public as a result of routine or accidental release of radioactive materials to the atmosphere. This capability is required to evaluate the need for protective measures to protect the health and safety of the public and is consistent with the recommendations of Regulatory Guide 1.23, "Onsite Meteorological Programs," February 1972.

TESTING REQUIREMENTS

CHANNEL CHECK

The daily channel check consists of a qualitative assessment, by observation, of each instrument channel's behavior based upon knowledge of current and previous weather conditions. Each channel is verified to have power, indicating on scale, and updating normally.

CHANNEL VERIFICATION

The weekly channel verification combines a more extensive channel check with limited calibration checks and parameter adjustments as necessary. Visual inspections, from the ground, of the wind speed cups and directional vanes are also performed.

CHANNEL CALIBRATION

The semi-annual channel calibration encompasses the entire channel from the sensors to the data recorders. Each sensor is lowered from the tower, inspected, and replaced if necessary. A full calibration on each processor and data recorder is performed and replaced if necessary.
