In addition, SCE has submitted several letters in response to Generic Letter 2004-02, "Potential Impact of Debris Blockage on Emergency Recirculation During Design Basis Accidents at Pressurized-Water Reactors," also known as Generic Safety Issue (GSI)-191. In our most recent submittal dated May 15, 2013 (ADAMS Accession No. ML13136A008), SCE committed to complete the evaluations prescribed by the limitations and conditions of the NRC Safety Evaluation for WCAP-16793-NP and provide evaluation results and associated changes to the Updated Final Safety Analysis Report. Based on the permanent cessation of operations of SONGS Units 2 and 3, SCE considers that this commitment is no longer necessary and withdrawn as it was associated with power operation. SCE considers all GSI-191 resolution activities as discontinued and all open commitments as closed.

This letter contains no new commitments.
