Washington, DC 20555-0001

July 23, 2013

Petitions calling for the closure of Indian Point and for improved health and safety measures

Dear Chairwoman MacFarlane,

Hudson River Sloop, Clearwater Inc., representing ten thousand members in the Hudson River Valley, has respectfully included, for your review, petitions signed by concerned citizens of New York State regarding the issues related to the Indian Point Energy Center (IPEC). Please find enclosed two separate, but related, petitions:

- 1) a petition to close Indian Point, and
- 2) a petition to upgrade health and safety measures at Indian Point.

Signatures on these petitions were collected at Clearwater's Great Hudson River Revival on the weekend of June 15-16, 2013. 639 people are calling for an upgrade of health and safety measures related to Indian Point, and an additional 809 people (with some overlap) are calling to close Indian Point entirely, as to well as upgrade health and safety measures. As these documents indicate, there are many individuals who wish to see action taken to strengthen safety mechanisms within a more appropriate radius around the Indian Point Nuclear Power Plant, to reevaluate the framework of nuclear power regulations in general, and – for many – to close and safely decommission Indian Point. A significant number of New Yorkers, as well as others who live in the tri-state area, remain concerned over the possible catastrophic health, economic, and environmental problems the continued operation of the IPEC could cause if Entergy Corporation and the Nuclear Regulatory Commission are allowed to carry-on in a "business-as-usual" manner.

As numerous hearings and reports have shown there are many economically viable energy alternatives to IPEC available in New York State. By supporting actions to strengthen precautionary policies that reinforce nuclear power regulation, you will demonstrate a strong commitment to protecting the present and future economic, public health, and environmental resilience of New York State and in doing so, will define yourself as an advocate for sound and sustainable energy policies. We hope that you will consider the collective voice of these individuals in your deliberations on this issue.

Thank you for your time and consideration.

Sincerely,

Manna Jo Greene, Environmental Director

PETITION TO CLOSE INDIAN POINT – NOT RELICENSE IT

The safest thing we can do for our community is to close Indian Point; in the meantime here are important measures that need to be put into effect immediately.

We, the undersigned, strongly urge the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

- Move spent fuel rods into hardened dry cask storage as quickly as is safely possible
- Provide full containment for the spent fuel pools and control rooms; establish independent back up electricity and cooling for spent fuel pools
- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

PETITION TO CLOSE INDIAN POINT – NOT RELICENSE IT

The safest thing we can do for our community is to close Indian Point; in the meantime here are important measures that need to be put into effect immediately.

We, the undersigned, strongly urge the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

- Move spent fuel rods into hardened dry cask storage as quickly as is safely possible
- Provide full containment for the spent fuel pools and control rooms; establish independent back up electricity and cooling for spent fuel pools
- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

- Provide full containment for the spent fuel pools and control rooms; establish independent back up electricity and cooling for spent fuel pools
- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

PETITION TO CLOSE INDIAN POINT – NOT RELICENSE IT

The safest thing we can do for our community is to close Indian Point; in the meantime here are important measures that need to be put into effect immediately.

We, the undersigned, strongly urge the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

- Move spent fuel rods into hardened dry cask storage as quickly as is safely possible
- Provide full containment for the spent fuel pools and control rooms; establish independent back up electricity and cooling for spent fuel pools
- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

MAIL COPIES TO:

CHAIRWOMAN ALLISON MACFARLANE, US NUCLEAR REGULATORY COMMISSION, Mail Stop O-16G4, Washington, DC 20555-0001

HON. ANDREW CUOMO, New York State Capitol Bldg. Albany, NY 11224

HUDSON RIVER SLOOP CLEARWATER, 724 Wolcott Ave., Beacon, NY 12508 and to IPSEC, PO Box 131, Ossining, NY 10562-0131

PETITION TO CLOSE INDIAN POINT – NOT RELICENSE IT

The safest thing we can do for our community is to close Indian Point; in the meantime here are important measures that need to be put into effect immediately.

We, the undersigned, strongly urge the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

- Move spent fuel rods into hardened dry cask storage as quickly as is safely possible
- Provide full containment for the spent fuel pools and control rooms; establish independent back up electricity and cooling for spent fuel pools
- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

PETITION TO CLOSE INDIAN POINT – NOT RELICENSE IT

The safest thing we can do for our community is to close Indian Point; in the meantime here are important measures that need to be put into effect immediately.

We, the undersigned, strongly urge the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

- Move spent fuel rods into hardened dry cask storage as quickly as is safely possible
- Provide full containment for the spent fuel pools and control rooms; establish independent back up electricity and cooling for spent fuel pools
- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

PETITION TO CLOSE INDIAN POINT – NOT RELICENSE IT

The safest thing we can do for our community is to close Indian Point; in the meantime here are important measures that need to be put into effect immediately.

We, the undersigned, strongly urge the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

- Move spent fuel rods into hardened dry cask storage as quickly as is safely possible
- Provide full containment for the spent fuel pools and control rooms; establish independent back up electricity and cooling for spent fuel pools
- Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
- Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
- Remedy the flaws and deficiencies regarding the emergency evacuation plan raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
- Consider all seismological information prior to relicensing

PETITION TO UPGRADE HEALTH AND SAFETY MEASURES AT INDIAN POINT

The ongoing crisis at the Fukushima Daiichi Nuclear Power Plant in Japan brings home the disastrous consequences of a catastrophic release of high-level radiation from nuclear reactors **or from spent fuel storage** Indian Point Nuclear Power Plant. The measures embodied in this petition, if acted upon, would make us all safer, and are appropriate **whether the plant is closed and decommissioned or is relicensed and continues to operate**. Therefore, we, the undersigned, request that the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

1. Move spent fuel rods into hardened dry cask storage as soon as is safely possible
2. Provide full containment for the spent fuel pools and establish independent back up electricity and cooling for the spent fuel pools
3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation

PETITION TO UPGRADE HEALTH AND SAFETY MEASURES AT INDIAN POINT

The ongoing crisis at the Fukushima Daiichi Nuclear Power Plant in Japan brings home the disastrous consequences of a catastrophic release of high-level radiation from nuclear reactors **or from spent fuel storage** Indian Point Nuclear Power Plant. The measures embodied in this petition, if acted upon, would make us all safer, and are appropriate **whether the plant is closed and decommissioned or is relicensed and continues to operate**. Therefore, we, the undersigned, request that the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

1. Move spent fuel rods into hardened dry cask storage as soon as is safely possible
2. Provide full containment for the spent fuel pools and establish independent back up electricity and cooling for the spent fuel pools
3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation

The ongoing crisis at the Fukushima Daiichi Nuclear Power Plant in Japan brings home the disastrous consequences of a catastrophic release of high-level radiation from nuclear reactors **or from spent fuel storage** Indian Point Nuclear Power Plant. The measures embodied in this petition, if acted upon, would make us all safer, and are appropriate **whether the plant is closed and decommissioned or is relicensed and continues to operate**. Therefore, we, the undersigned, request that the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

1. Move spent fuel rods into hardened dry cask storage as soon as is safely possible
2. Provide full containment for the spent fuel pools and establish independent back up electricity and cooling for the spent fuel pools
3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation

3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation

PETITION TO UPGRADE HEALTH AND SAFETY MEASURES AT INDIAN POINT

The ongoing crisis at the Fukushima Daiichi Nuclear Power Plant in Japan brings home the disastrous consequences of a catastrophic release of high-level radiation from nuclear reactors **or from spent fuel storage** Indian Point Nuclear Power Plant. The measures embodied in this petition, if acted upon, would make us all safer, and are appropriate **whether the plant is closed and decommissioned or is relicensed and continues to operate**. Therefore, we, the undersigned, request that the following actions be implemented as soon as possible with regard to Indian Point Nuclear Power Plant:

1. Move spent fuel rods into hardened dry cask storage as soon as is safely possible
2. Provide full containment for the spent fuel pools and establish independent back up electricity and cooling for the spent fuel pools
3. Perform a comprehensive evaluation of the faulty inflatable gasket used in the exchange canal between the reactor and storage in fuel pool.
4. Extend the evacuation zone from 10 to 50 miles, as the Nuclear Regulatory Commission recommended for Americans in Japan
5. Remedy the flaws and deficiencies regarding emergency evacuation raised by the James Lee Witt report; consider lessons learned from Fukushima and Hurricane Sandy in evacuation planning. Congress should hold hearings on the viability of evacuation around nuclear plants.
6. Consider all seismological data and upgrade infrastructure accordingly for continued operation
