Docket No.: NRC-0000-1302-1600

Dear Mr. Ferdas,

The Connecticut Department of Energy and Environmental Protection's (CTDEEP) letter to the US Nuclear Regulatory Commission (USNRC) dated June 1, 2013 (Docket number 123-456-78910) outlined further action to be taken by the CTDEEP to conclude its radiological assessment of the former ABB/CE site located at 2000 Day Hill Road, Windsor, CT. This action was to take and analyze an additional soil sample at the location known as CE-FSS-33-09. The CTDEEP has reviewed the results of this soil sample analysis. The soil sample results indicate radioactivity at background levels in soil.

The CT DEEP has now completed its assessment of plans, documents and procedures related to the radiological remediation of the ABB/CE site located at 2000 Day Hill Road and concluded its on-site confirmatory measurements.

Within the scope of our review the CT DEEP's Division of Radiation has determined that the site meets the release criteria of established by the CT DEEP of 19 mRem/yr, Total Effective Dose Equivalent.

Sincerely,

Edward L. Wilds, Jr., Ph.D.  
Director, Radiation Division
