

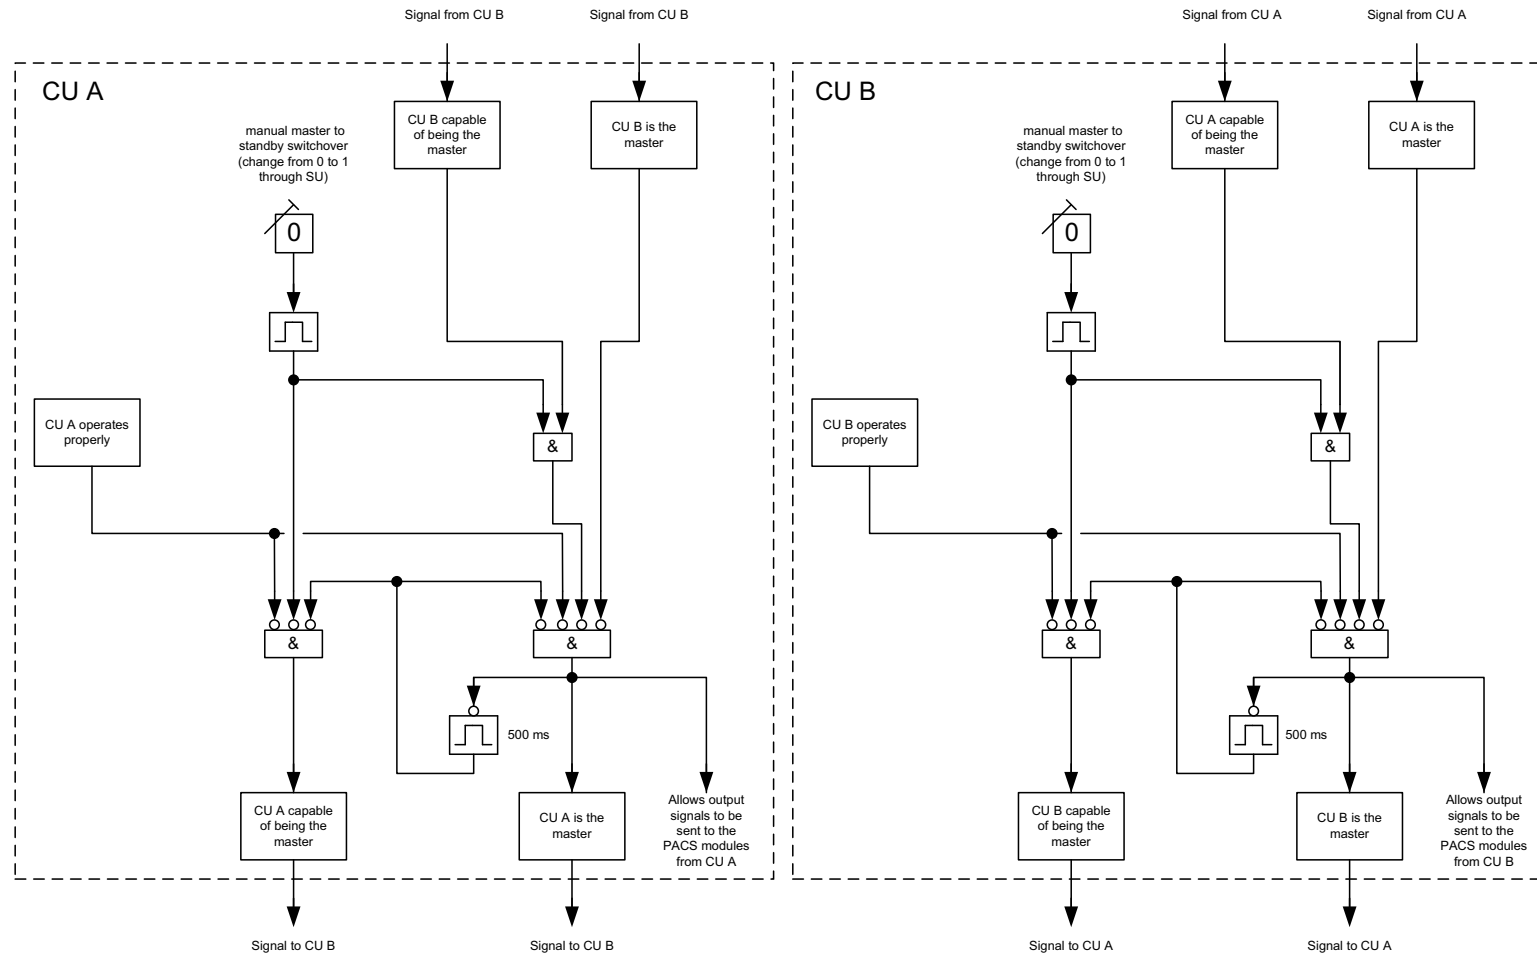

Figure 7.1-28—Definition and Allocation of Response Times

EPR3429 T2

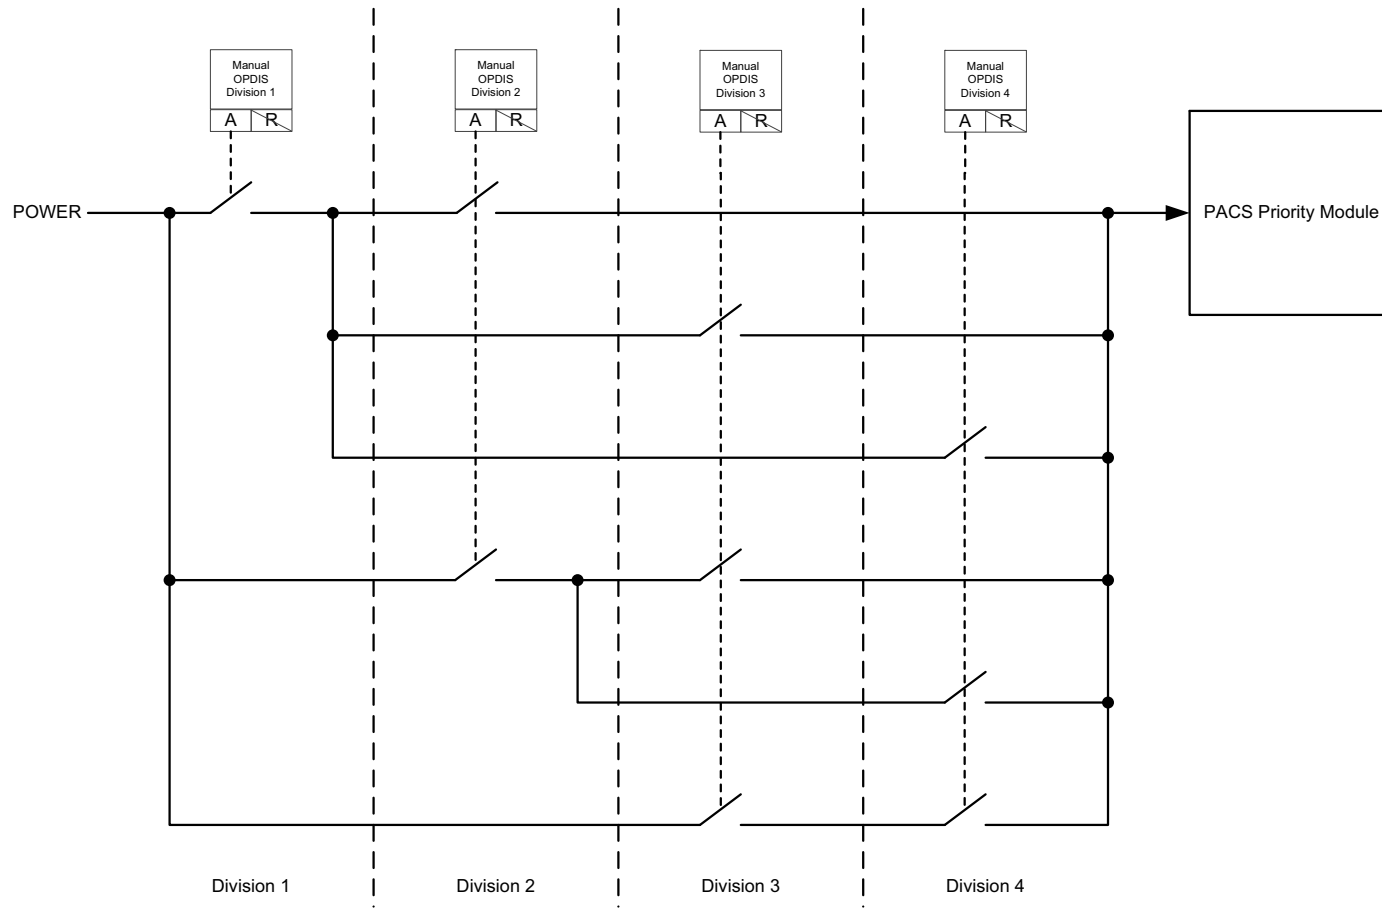

Figure 7.1-29—SAS Switchover Configuration

NOTE: The terms CU A and CU B do not correspond to specific CUs. These terms are used to facilitate the understanding of a CU pair in the general master/standby configuration. If a CU operates properly, then the "CU operates properly" block sends out a "0" signal to denote that no errors were detected.
