Subject: Discussions on Nozzle 63 work

Hi Jack and Jack,

Looking forward to visiting with you both next week. I've received some NRC guidance on the discussions we can have on the topic of Nozzle 63. See message below so that you are aware, and let me know if you have any questions.

Thanks!
Tony

Tony,
Feel free to discuss with Jack Lareau and Jack Spanner about the NRC-sponsored research on Nozzle 63. You may discuss the experimental techniques, findings, lessons-learned, and similar information. Please note that NRC has not yet drawn any conclusions concerning the implication of the findings for current inspection requirements, including code cases, and it would be premature to speculate on such matters. You may discuss current or proposed industry research, including the design of mockups, as an independent technical expert. Please don't imply that you're conveying the opinion, recommendation, or suggestion of the NRC. I will plan to follow up with you after the meeting to hear how things went.

Thanks,
Greg
