Holly,

Yes, working on it now.

Can you figure out what we have to do to close out this from SECY?

Hi David,
many thanks for your answer and for the tip.
I try to ask the DOE, which, however, had already sent instance.
Best Regards
Nicola Piccenna

Hi Nicola –

We have checked with our import/export licensing folks, and they have no record of a license application for any radioactive material shipments from Italy. Your email is not clear on the nature of the shipment, but your mention of high-level waste and a military base as the point of departure suggests that this might not be a civilian shipment, and therefore would not be under the jurisdiction of the US Nuclear Regulatory Commission. I suggest you contact the US Department of Energy's National Nuclear Security Administration.

Regards,

David McIntyre
Public Affairs Officer
U.S. Nuclear Regulatory Commission

Not sure if this is an OIP question or a high-level waste question.

Subject: Transport of radioactive material to hidden destination?

Dear gentlemen,

I need to know if you confirm the arrival of radioactive material from Italy in the last week. Specially, I would like to know destination in U.S.A. of those materials and information about responsiveness of the shipment with U.S.A. standard safety and security preview in the **High(low)-Level Waste Disposal Program published on your site www.nrc.gov**.

My last email, today without answer is this:

I am an Italian journalist, my name is Nicola Piccenna (press card of Basilicata - Italy - n. 126256). On 29 July, a transport of radioactive material has started from Military Airport of Gioia del Colle (Bari - Italy). Italian government authorities claim that the destination of the radioactive material was the United States of America. Could you give us confirmation of the type, quantity and destination of the aforementioned "transport"?

Thanks

Nicola Piccenna
