It is part of the Fukushima response. Our letter requesting the information is available publicly from our web site, [www.nrc.gov](http://www.nrc.gov), under ADAMS accession # ML12053A340. You can enter accession numbers in the search box in the upper right of the home page. In section 2.1 on flooding, we requested a flooding hazard reevaluation report from all power reactor licensees.

Thanks, John. Is this re-evaluation report specifically related to requests pre-Fukushima about the Jocassee Dam issue. Or is this part of a larger Fukushima response?

Duke Energy did submit a flooding hazard reevaluation report to the NRC dated 3/12/13, but it is a non-public document. At the meeting we will discuss sections of the report that can be discussed publicly. Duke may provide public slides. For example, Duke did an analysis of the consequences of a failure of the Jocassee Dam. I expect the NRC staff will discuss the analysis method they used, and ask questions about how the parameters were selected (for example, how large was the assumed failure and what were the flow rates out of Lake Jocassee). The NRC will not be making any decisions at this meeting, but rather just gather information to help us reach a decision on the validity of the methods used in the analysis.

Hi, John. I'd like to get the info on the meeting re: Jocassee Dam flooding issues on Monday. Is there any material to review beforehand? I'm curious what exactly the meeting will address and what is expected to come out of it.

Thanks  
- Eric
