Subject: Status of Acceptance Review for Hope Creek LAR to Relocate SRV Position Instrumentation Information to the TRM
Date: Thursday, September 05, 2013 4:11:00 PM
Importance: High

Emily,

By letter dated July 30, 2013, (ADAMS Accession No. ML13211A205) PSEG submitted a license amendment request (LAR) to relocate Hope Creek safety/relief valve position instrumentation from, the Technical Specifications to the Technical Requirements Manual (TAC MF2508). The purpose of this e-mail is to provide the status of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of this relief request.

Due to recent work impacts resulting from the formation of the new Mitigating Strategies Directorate in NRR, the acceptance review for this LAR has been delayed. The NRC staff is finalizing a process to reassess and prioritize licensing action requests under review. The NRC staff will complete this process and communicate with you again by September 30, 2013, regarding the timing for completing the acceptance review for this LAR.

If you have any questions, please contact me.

John Hughey
Salem / Hope Creek Project Manager
