Re: Pending Application PXB178.00

We apologize for overlooking section 9a which should have been as detailed below.

Section 9a. Ultimate end uses.

Cs-137 sources will be loaded into irradiators for biological irradiation: typically animals, cells, blood products etc.

Co-60 sources will be loaded into irradiators for high dose radiation requirements; typically insect sterilization , electronic component hardness testing, product sterilization, radiation chemistry , etc.

Thank you for calling out our omission. Please call if we may provide additional information.

Best regards,

J L Shepherd
