Subject: RE: KI for EPZ communities in MA

Hi Jana,

I apologize for the delay in responding. To answer your first question- yes, NRC will be distributing only 65 mg tablets.

We are working towards KI replenishment. It is our intent that KI will be replenished prior to expiration of current state stockpiles, in accordance with Commission direction. Unfortunately, I don't have any specifics at this time. As soon as we know more details, we will let you know.

Trish Milligan

Subject: KI for EPZ communities in MA

Hi Ms. Milligan,

Suzanne Condon, the Associate Commissioner of the MA Department of Public Health and Director of the Bureau of Environmental Health, which includes the MA Radiation Control Program, asked me to reach out to you. We are working with some staff retirement plans and trying to plan for the coordination of delivery of KI to the EPZ communities in MA and have also been asked some questions by one of the towns regarding the doses being provided. I have been informed that the NRC is planning to provide KI in 65 mg tablets to the EPZ communities (instead of 130 mg tablets) and would like to confirm. Is this correct? Also, when do you anticipate that MA would receive shipment of the tablets?

Thank you so much,

Jana
