

March 5, 2014

The Honorable Joseph R. Biden, Jr.
President of the Senate
Washington, DC 20510

Dear Mr. President:

The Government Performance and Results Modernization Act (GPRAMA) of 2010 requires agencies to submit an updated Strategic Plan to the President and Congress the year following the start of a presidential term. Accordingly, the U.S. Nuclear Regulatory Commission (NRC) has revised its Strategic Plan for Fiscal Years (FY) 2014 – 2018 to replace the agency's current FY 2008 – 2013 plan. In accordance with Section 306 (d) of the GPRAMA, we are consulting with Congress and requesting comments on our enclosed draft Plan.

The draft Plan describes the agency's mission and its two strategic goals, which, although slightly reworded for clarity and readability, remain fundamentally unchanged from the current plan. The NRC's mission is to license and regulate the Nation's civilian use of radioactive materials to protect the public health and safety, promote the common defense and security, and protect the environment. Its two strategic goals are: (1) to ensure the safe use of radioactive materials and (2) to ensure the secure use of radioactive materials. New elements of the draft plan include several strategic objectives with associated strategies and key activities that will be used to achieve the agency's strategic goals.

The draft strategies address the key challenges and external factors the agency will face as the regulatory environment continues to change during the upcoming planning period. Examples include processing license applications involving new technologies such as small modular reactors and continued implementation of enhancements to improve reactor safety based on insights from the 2011 nuclear accident at Fukushima Dai-ichi. The continued globalization of nuclear technology and the nuclear supply chain is another factor that will affect the NRC, driving the need for increased international engagement on the safe and secure use of radioactive material and the need for new oversight approaches to ensure that foreign components used in U.S. nuclear facilities are in compliance with NRC requirements.

Many of the challenges and external factors in the draft plan, along with potential strategies for addressing them, were identified or reinforced during facilitated sessions with external stakeholders. We are also soliciting input from the public to ensure that all views are considered as we finalize our plan.

As required by the GPRAMA, the NRC has established performance goals for the strategic objectives that show how the agency will measure its success. The agency will set the targets for these performance goals in its annual performance plan and report on the results in its annual performance report to Congress.

J. R. Biden

Dear Mr. President:

The Government Performance and Results Modernization Act (GPRAMA) of 2010 requires agencies to submit an updated Strategic Plan to the President and Congress the year following the start of a presidential term. Accordingly, the U.S. Nuclear Regulatory Commission (NRC) has revised its Strategic Plan for Fiscal Years (FY) 2014 – 2018 to replace the agency's current FY 2008 – 2013 plan. In accordance with Section 306 (d) of the GPRAMA, we are consulting with Congress and requesting comments on our enclosed draft Plan.

The draft Plan describes the agency's mission and its two strategic goals, which, although slightly reworded for clarity and readability, remain fundamentally unchanged from the current plan. The NRC's mission is to license and regulate the Nation's civilian use of radioactive materials to protect the public health and safety, promote the common defense and security, and protect the environment. Its two strategic goals are: (1) to ensure the safe use of radioactive materials and (2) to ensure the secure use of radioactive materials. New elements of the draft plan include several strategic objectives with associated strategies and key activities that will be used to achieve the agency's strategic goals.

The draft strategies address the key challenges and external factors the agency will face as the regulatory environment continues to change during the upcoming planning period. Examples include processing license applications involving new technologies such as small modular reactors and continued implementation of enhancements to improve reactor safety based on insights from the 2011 nuclear accident at Fukushima Dai-ichi. The continued globalization of nuclear technology and the nuclear supply chain is another factor that will affect the NRC, driving the need for increased international engagement on the safe and secure use of radioactive material and the need for new oversight approaches to ensure that foreign components used in U.S. nuclear facilities are in compliance with NRC requirements.

Many of the challenges and external factors in the draft plan, along with potential strategies for addressing them, were identified or reinforced during facilitated sessions with external stakeholders. We are also soliciting input from the public to ensure that all views are considered as we finalize our plan.

As required by the GPRAMA, the NRC has established performance goals for the strategic objectives that show how the agency will measure its success. The agency will set the targets for these performance goals in its annual performance plan and report on the results in its annual performance report to Congress.

P.J. Leahy

The draft Plan describes the agency's mission and its two strategic goals, which, although slightly reworded for clarity and readability, remain fundamentally unchanged from the current plan. The NRC's mission is to license and regulate the Nation's civilian use of radioactive materials to protect the public health and safety, promote the common defense and security, and protect the environment. Its two strategic goals are: (1) to ensure the safe use of radioactive materials and (2) to ensure the secure use of radioactive materials. New elements of the draft plan include several strategic objectives with associated strategies and key activities that will be used to achieve the agency's strategic goals.

The draft strategies address the key challenges and external factors the agency will face as the regulatory environment continues to change during the upcoming planning period. Examples include processing license applications involving new technologies such as small modular reactors and continued implementation of enhancements to improve reactor safety based on insights from the 2011 nuclear accident at Fukushima Dai-ichi. The continued globalization of nuclear technology and the nuclear supply chain is another factor that will affect the NRC, driving the need for increased international engagement on the safe and secure use of radioactive material and the need for new oversight approaches to ensure that foreign components used in U.S. nuclear facilities are in compliance with NRC requirements.

Many of the challenges and external factors in the draft plan, along with potential strategies for addressing them, were identified or reinforced during facilitated sessions with external stakeholders. We are also soliciting input from the public to ensure that all views are considered as we finalize our plan.

As required by the GPRAMA, the NRC has established performance goals for the strategic objectives that show how the agency will measure its success. The agency will set the targets for these performance goals in its annual performance plan and report on the results in its annual performance report to Congress.

The Honorable Mike Simpson
Chairman, Subcommittee on Energy
and Water Development
Committee on Appropriations
United States House of Representatives
Washington, DC 20515

Dear Mr. Chairman:

The Government Performance and Results Modernization Act (GPRAMA) of 2010 requires agencies to submit an updated Strategic Plan to the President and Congress the year following the start of a presidential term. Accordingly, the U.S. Nuclear Regulatory Commission (NRC) has revised its Strategic Plan for Fiscal Years (FY) 2014 – 2018 to replace the agency's current FY 2008 – 2013 plan. In accordance with Section 306 (d) of the GPRAMA, we are consulting with Congress and requesting comments on our enclosed draft Plan.

The draft Plan describes the agency's mission and its two strategic goals, which, although slightly reworded for clarity and readability, remain fundamentally unchanged from the current plan. The NRC's mission is to license and regulate the Nation's civilian use of radioactive materials to protect the public health and safety, promote the common defense and security, and protect the environment. Its two strategic goals are: (1) to ensure the safe use of radioactive materials and (2) to ensure the secure use of radioactive materials. New elements of the draft plan include several strategic objectives with associated strategies and key activities that will be used to achieve the agency's strategic goals.

The draft strategies address the key challenges and external factors the agency will face as the regulatory environment continues to change during the upcoming planning period. Examples include processing license applications involving new technologies such as small modular reactors and continued implementation of enhancements to improve reactor safety based on insights from the 2011 nuclear accident at Fukushima Dai-ichi. The continued globalization of nuclear technology and the nuclear supply chain is another factor that will affect the NRC, driving the need for increased international engagement on the safe and secure use of radioactive material and the need for new oversight approaches to ensure that foreign components used in U.S. nuclear facilities are in compliance with NRC requirements.

Many of the challenges and external factors in the draft plan, along with potential strategies for addressing them, were identified or reinforced during facilitated sessions with external stakeholders. We are also soliciting input from the public to ensure that all views are considered as we finalize our plan.

As required by the GPRAMA, the NRC has established performance goals for the strategic objectives that show how the agency will measure its success. The agency will set the targets for these performance goals in its annual performance plan and report on the results in its annual performance report to Congress.

M. Simpson
