Subject: Protect our communities from radioactive waste!

Sep 22, 2013

Allison McFarlane

Dear McFarlane,

I am writing you because I am concerned about how we store our most hazardous waste, the radioactive fuel rods from nuclear reactors. We should not license or re-license any reactor until it has been proven that we can successfully isolate this waste.

While we are working on the solution, I am also concerned that many of our nuclear reactors have over-crowded fuel pools on site. These present safety threats to the communities and industries that surround the plants. The NRC should take immediate action to reduce the number of fuel assemblies in the water-filled pools. Before transferring the fuel rods to cask storage, the cask storage needs to be examined and reinforced to be able to safely store the fuel rods particularly those that qualify as high burn up fuel. Hardened on-site storage of the casks should become the choice for storage.

I am also concerned about the sustainability of nuclear power. The EIS needs to evaluate the true costs of nuclear power after the subsidies are stripped away. The long-term costs of decommissioning need to be considered as well. The ongoing costs to US taxpayers should be transparent in this EIS.

Finally, the EIS should consider the option of not making any nuclear waste at all in the future by comparing the environmental footprint of nuclear from mining to long term waste disposal to that of renewables and energy efficiency.

The ongoing catastrophe at Fukushima stands as a warning for what can happen. If we are fortunate, this crisis may eventually be resolved.

Our entire northern hemisphere could be at risk if the damaged tank of spent fuel rods explodes. The potential of this nightmare is already with us. Do everything you can to minimize the danger here in the United States. The thought of transporting these dangerous materials to distant storage sites seems short sighted and foolhardy. We now know the unthinkable can happen. Please protect us from future Fukushimas.

And pray that Fukushima may eventually be an object lesson, not the end of life as we know it.

Sincerely,

Anna Jacopetti
