Attention: John B. Martin, Regional Administrator

Dear Sir:

Subject:

Docket Nos. 50-361 and 50-362

Prompt Report

License Condition 2.C.(14)a and 2.C.(12)a

San Onofre Nuclear Generating Station, Units 2 and 3

Pursuant to License Condition 2.G to Facility Operating Licenses NPF-10 and NPF-15 for San Onofre Units 2 and 3, respectively, this submittal provides written confirmation of our prompt notification of November 1, 1988, of a reportable occurrence associated with the fire protection program.

Licence Condition 2.C.(14)a and 2.C.(12)a of Operating Licenses NPF-10 and NPF-15, respectively, require that SCE maintain in effect and fully implement the Fire Protection Plan as delineated in the Fire Hazards Analysis (FHA).

On November 1, 1988, while preparing written correspondence to NRR involving an Appendix R deviation request, it was determined that the condition described by the deviation request requires a 24-hour notification and a 14-day follow-up report pursuant to License Condition 2.G. Specifically, redundant safe shutdown cables located in fire area 2-YD-30-200 were not separated and/or protected in accordance with 10 CFR 50, Appendix R, Section III.G.

The cabling is routed through underground duct banks and manholes in the Unit 2 and 3 common yard area. A fire protection engineering evaluation of this condition (i.e., spatial separation, contour of the ground, lack of combustible path) determined that an equivalent level of protection to Section III.G.2 of Appendix R to 10 CFR 50 is provided in this fire area and a deviation request will be submitted to NRR. Accordingly, no corrective actions are planned. In accordance with License Condition 2.G, a 14-day followup report will be submitted by November 15, 1988.

TE22

If you require any additional information, please so advise.

Sincerely,

HEMOR-
