**Subject:** Fukushima

Dear Dr. Macfarlane,

Considering the seriousness of the accident and now, with the possibility that the 1300 spent fuel rods are precariously suspended above the damaged building unit 4 could combust and the radiation will most likely kill many many people in Japan and the fallout will blow to the United States via the prevailing winds from west to east across the Pacific Ocean. Considering the amount of nuclear material and the amount of fallout (several articles say 400x Hiroshima) not only will the oceans life be damaged irreversibly but many in the Western States of the US and Canada would be seriously impacted.

We need to, as a world, come together to clean up and contain this disaster. TEPCO and those who were derelict in their duties, must be held responsible. To isolate what is left of the reactors and what must be done to wall in and cool the radioactive material cannot be done only by Japan. Japan does not have the resources or the man power to do this. We as a world, must step up. It is also the most humanitarian thing we as a world can do.

I am asking you to pull together the international power and minds to step in before Fukushima explodes. Letting TEPCO bungle and obfuscate longer will be too late. I plan to move my family during a very important time in my children's lives to escape the flow of the atmospheric lethal contamination. I am sure many are thinking of this, too, which will be disastrous for millions and for the country at large.

The United Nations may be a source of countries who would be willing to help but the US must stand up first.

Sincerely yours,

Teresa Young
