Mr. H. R. Denton, Director
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Gentlemen:

Subject: Docket 50-206
Amendment No. 104
San Onofre Nuclear Generating Station
Unit 1

Enclosed are three executed and thirty-seven conformed copies of Amendment No. 104 in Docket No. 50-206. Amendment No. 104 consists of Proposed Change No. 109 to the Technical Specifications incorporated into Provisional Operating License No. DPR-13 as Appendix A.

Proposed Change No. 109 is a request to revise Appendix B Technical Specification 4.2.1, Safety Injection and Containment Spray System Periodic Testing, relating to the surveillance test acceptance criteria for the trisodium phosphate addition system. This revision has become necessary because of an interpretation of the test acceptance which would disallow previous acceptable test results.

This revision will set a minimum value for the degradation of the trisodium phosphate additive in the San Onofre containment sump. It does not alter the basis for the technical specification.

Also enclosed is Southern California Edison Company's check No. A932349 dated March 24, 1982, in the amount of \$4,000.00 as required by 10CFR170.22.

Very truly yours,

Robert Dietch
