Director, Office of Nuclear Reactor Regulation  
Attention: Mr. D. M. Crutchfield, Chief  
Operating Reactors Branch No. 5  
Division of Licensing  
U.S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Gentlemen:

Subject: Docket No. 50-206  
NUREG-0737 Technical Specifications  
San Onofre Nuclear Generating Station  
Unit 1

- References: A. Letter, D. G. Eisenhut, NRC, to All Pressurized Water Reactor Licensees, NUREG-0737 Technical Specifications (Generic Letter No. 83-37), November 1, 1983
- B. Letter, R. W. Krieger, SCE, to D. M. Crutchfield, NRC, NUREG-0737 Technical Specifications, December 9, 1982

Reference A provided us with model technical specifications for those NUREG-0737 items that were scheduled for implementation after December 31, 1981. The letter requested a response on the reactor coolant gas vent system technical specifications within 30 days of receipt of the letter. It is the purpose of this letter to respond to Generic Letter No. 83-37 for San Onofre Unit 1.

As previously indicated to you in Reference B, we will provide you with a proposed change to the San Onofre Unit 1 technical specifications in response to NRC Generic Letter No. 82-16 approximately 60 days prior to return to power from the current outage. Since Reference A (Generic Letter No. 83-37) is a supplement to Generic Letter No. 82-16, we propose to meet the same schedule. Accordingly, we plan to submit an amendment application containing a proposed change in response to these two generic letters 60 days prior to return to

power from the current outage. The schedule date for return to power from the current outage will be established as part of the Integrated Living Schedule for San Onofre Unit 1.

If you have any questions regarding the above discussion, please let me know.

Very truly yours,

*M. O. Medford*
