Washington, D.C. 20555

Gentlemen:

Subject: Docket No. 50-206
Proposed Change No. 126 to the Technical Specifications
San Onofre Nuclear Generating Station
Unit 1

By letter dated December 30, 1983, we submitted a request for additional consideration of the removal of Technical Specification 4.4.E as part of Proposed Change No. 126 to the San Onofre Unit 1 Technical Specifications submitted on November 30, 1983. Subsequently, the NRC staff has identified potential inconsistencies regarding the requirements of 4.4.E. It has been determined that the best way to resolve these concerns is to include the removal of 4.4.E in an upcoming proposed change to the Technical Specifications which will include all changes resulting from equipment modifications to the Auxiliary Feedwater System accomplished as a result of the TMI Lessons Learned requirements.

It is therefore requested that no additional consideration be given to the removal of Technical Specification 4.4.E as part of Proposed Change No. 126. The removal of this surveillance requirement will be handled as part of a future proposed change.

If you have any questions or desire additional information, please contact me.

Very truly yours,

cc: J. O. Ward, California Department of Health Services
