Mr. R. H. Engelken, Director
Office of Inspection and Enforcement
U. S. Nuclear Regulatory Commission
Region V
Suite 202, Walnut Creek Plaza
1990 North California Blvd.
Walnut Creek, California 94596

Dear Mr. Engelken:

Subject: Docket Nos. 50-361 and 50-362
San Onofre Nuclear Generating Station, Units 2 and 3

By letter dated August 31, 1977, Southern California Edison submitted a final report concerning a reportable condition discovered during construction relating to cracking of stainless steel liner plate used in the spent fuel handling and storage facilities. That final report described our plans for additional crack monitoring and investigation. These plans have been changed based on further evaluation and experience.

Accordingly, enclosed in accordance with 10CFR50.55 (e), are twenty-five (25) copies of a revised final report which describes changes in our crack monitoring and investigation plans. The report is entitled, "Revised Final Report on the Cracking of Stainless Steel Liner Plate Material Used in Construction of San Onofre Nuclear Generating Station, Units 2 and 3."

If you have any questions regarding this report, we would be pleased to discuss this matter with you at your convenience.

Very truly yours,

Enclosures
