RECEIVED

September 16, 2008

MAR 15 2009

LICENSING

Ms. Charlotte Engstrom Vice President and General Counsel General Atomics P.O. Box 85608 San Diego, CA 92186-9784

SUBJECT:

AMENDMENT 90 TO LICENSE SNM-696: RELEASE A PORTION OF GENERAL ATOMICS FACILITY TO UNRESTRICTED USE AND DELETE FROM LICENSE SNM-696: BUILDING 30/31-PHASE IV AND BUILDING 30-PHASE V (TAC L32694)

Dear Ms. Engstrom:

This refers to your submittal of a request dated August 20, 2008, to amend Materials License SNM-696, which referenced your letter CAL/696-3342, dated March 22, 2001 and CAL/696-3404, dated September 6, 2001, which transmitted final radiological survey results for Building 30 – Phase V and Building 30/31 – Phase IV, respectively. Amendment 172 to California Radioactive Materials License 0145-37, dated August 10, 2008, was also referenced in your submittal.

Pursuant to Part 70 to Title 10 of the *Code of Federal Regulations* (10 CFR), Materials License SNM-696 is hereby amended to release Building 30/31 – Phase IV and Building 30 – Phase V areas to unrestricted use.

Safety Condition S-1 has been revised to include the dates of March 22, 2001, September 6, 2001 and August 20, 2008.

All other conditions of this license shall remain the same.

By approval of this amendment request, TAC L32694 is closed.

If you have any questions concerning this letter, please contact Merritt Baker of my staff by phone at (301) 492-3128 or via e-mail to Merritt.Baker@nrc.gov.

In accordance with 10 CFR 2.390 of the U.S. Nuclear Regulatory Commission's (NRC) "Rules of Practice," a copy of this letter will be available electronically for public inspection in the NRC Public Document Room and the Agencywide Documents Access and Management System (ADAMS). ADAMS is accessible from the NRC Web site at http://www.nrc.gov/reading-rm/adams.html (the Public Electronic Reading Room).

Sincerely,

/RA/

Michael Tschiltz, Deputy Director Fuel Facilities Licensing Directorate Division of Fuel Cycle Safety and Safeguards Office of Nuclear Material Safety and Safeguards

DOCKET: 70-734

LICENSEE: General Atomics

SUBJECT: SAFETY EVALUATION REPORT: REQUEST TO RELEASE A PORTION OF

GENERAL ATOMICS FACILITY TO UNRESTRICTED USE AND DELETE FROM LICENSE SNM-696: BUILDING 30/31 – PHASE IV AND BUILDING 30 –

PHASE V (TAC L32694)

BACKGROUND

By letter CAL/696-3342 dated March 22, 2001 (ML011310523) General Atomics (GA) requested that the former Building 30 Phase V areas be released by the State of California and the NRC to unrestricted use, and submitted the Final Radiological Survey Report and Confirmatory Survey results. The decision that the State of California be the lead agency for release of Phase IV and V areas was confirmed at a meeting between GA, NRC, and the California Department of Health Services (DHS) on April 6, 2001, and Table S-1 of the Site Decommissioning Plan was updated to reflect this. In addition, by letter CAL/696-3404 dated September 6, 2001 (ML012600312) General Atomics requested that the former Building 30/31 Phase IV areas be released by the State of California and the NRC to unrestricted use, and submitted the Final Radiological Survey Report and results of the Confirmatory Survey. Phase IV and Phase V areas were released via Amendment 172 to State of California materials license 0145-37, dated July 10, 2008 (ML082200223). The request for release by NRC was submitted via letter CAL/696-4223 dated August 20, 2008 (ML082410313).

DISCUSSION

GA has decommissioned and decontaminated its nuclear facilities and land areas in order to release them for unrestricted use. The Building 30/31 complex was decontaminated and released in phases, with Phase I and II areas released by NRC via Amendment 42 on March 11, 1998, and Phase III areas released via Amendment 67 on September 18, 2000. Phase IV and Phase V areas were decontaminated after operations ceased, and the licensee's final surveys were completed in 2000 and 2001.

NRC inspectors conducted a confirmatory survey of selected rooms in Buildings 30 and 31 during the period from February 26 through March 1, 2007, and documented their findings in Inspection Report 070-00734/07-001 (ML071210461). The affected rooms previously housed a linear accelerator (LINAC) facility and High Temperature Gas-cooled Reactor (HTGR) test area. The buildings had been surveyed by the State of California; therefore, the NRC confirmatory survey was focused on rooms that previously contained SNM.

The NRC's confirmatory surveys consisted of ambient gamma exposure rate surveys and fixed point sampling for total (fixed and removable) surface contamination. No exposure rate measurement exceeded the acceptance criteria limit of 10 μ R/hr above background. The inspectors also conducted fixed point measurements of alpha and beta particulate radioactivity. The sample results were less than the lower limit of detection of the survey meter. No swipe sample results were collected because surface radioactivity was not identified in these rooms. The results of all surveys were less than the criteria in the Site Decommissioning Plan dated October 11, 1996, for unrestricted release, and were consistent with the results obtained by the licensee.

ENVIRONMENTAL REVIEW

These changes do not affect the scope or nature of the licensed activity. 10 CFR 51.22 (c)(11) allows for a categorical exclusion if the following requirements have been satisfied:

- There is no significant change in the types or significant increase in the amounts of any effluents that may be released offsite.
- There is no significant increase in the individual or cumulative occupational radiation exposure.
- iii There is no significant construction impact.
- iv There is no significant increase in the potential for or no consequences from radiological accidents.

There are no nuclear fuel manufacturing activities being conducted at GA, nor does GA still have such capabilities. GA's special nuclear material license issued by the NRC has been amended to authorize possession only. No fuel processing activities are authorized. Since there are no longer any radioactive liquid releases from this facility, there will be no significant increase in the possibility of an offsite release and there will be no significant increase in individual or cumulative occupational radiation exposure. Consequently, there is no significant increase in the potential for, nor consequences from radiological accidents. Release of the former Building 30/31 rooms involves no construction activity. Therefore, there will be no construction impact.

The staff has determined that the proposed change does not adversely impact the public health and safety or the environment, and is categorically excluded from the requirement to prepare a site-specific environmental assessment. Therefore, in accordance with 10 CFR 51.22(c)(11), neither an environmental assessment nor an environmental impact statement is warranted for this action.

CONCLUSION

The NRC staff determined that the Building 30/31 Phase IV and V rooms were decommissioned and surveyed in accordance with the approved Decommissioning Plan. Confirmatory surveys were performed by the NRC inspectors and the results meet the approved NRC release criteria. Therefore, the staff recommends approval of the request.

- S-2. Records of all safety-related reports and analyses shall be retained as follows:
 - a. Copies of criticality and radiation safety analyses shall be retained for at least 2 years or for 6 months after a project is terminated, whichever is longer.
 - b. Copies of all other safety-related records (e.g., plant alterations and additions, abnormal occurrences associated with radioactivity releases, audits and inspections, instrument calibrations, ALARA findings, training and retraining, personnel exposures, routine radiation and environmental surveys) shall be retained for at least 2 years or longer if required by regulations.
- S-3. Notwithstanding the statements in Section 5.4.2 in the License Specification Volume (Part II), if double batching is not credible, the maximum safe batch size shall be no more than 75 percent of the minimum critical mass independent of the degree of water moderation and reflection. However, when the Th/U atomic ratio is ≥ 3.6 and the H/U ≤ 20, the maximum safe batch size may be increased to 790 g contained U-235 independent of whether double batching is credible.
- S-4. The Director QACD, upon recommendation of the appropriate manager within QACD, shall have authority to require immediate termination of activities and/or corrective action in any situation which, in their judgment, could lead to the unnecessary exposure of personnel to ionizing radiation, release of radioactive material, loss or damage of property, or non-compliance with the license or a regulation.
- S-5. The Criticality and Radiation Safety Committee (CRSC), functioning as an ALARA Committee, shall meet at least annually to review (1) reports of audits and inspections performed since the last ALARA review and (2) employee exposures and effluent release data to determine (a) if there are any upward trends developing in personnel exposures for identifiable categories of workers, types of operations, or effluent releases, (b) if exposures and releases might be lowered in accordance with the ALARA concept, and (c) if equipment for effluent and exposure control is being properly used, maintained, and inspected.

The CRSC evaluation, recommendations, and corrective actions shall be documented and the report shall be sent to the appropriate operations managers and the Vice President, Finance and Administration.

- S-6. Radiological Work Permits (RWPS) shall be issued for all unplanned or non-routine work with licensed material not covered by a WA. The RWP shall be signed by Health Physics management or a senior staff member before related work can commence. A senior staff member shall be a Health Physics Technician having a minimum of 5 years' experience in radiation safety. An evaluation of the safety effectiveness of the permit shall be made upon completion of the work.
- S-7. Radiation safety training, appropriate to the employee's needs, shall be given to all new employees.

	Amendment No. 90	
	IUCLEAR REGULATORY COMMISSION S LICENSE FARY SHEET	SNM-696 Docket or Reference Number 70-734

- S-8. Radiation safety training and indoctrination shall be conducted by the Health Physics Manager or by a similarly qualified individual. The Health Physics Manager may delegate training in that portion of the course to an individual who is uniquely qualified to present it.
- S-9. Continuous air sampling shall be conducted in any area where licensed material can become airborne.
- S-10. The location of air samplers shall be checked annually and whenever any process or equipment changes are made to verify the representativeness of work area air sampling. In addition, the location of air samplers shall be checked at the commencement of operations in any area that has been shutdown for more than 6 months to verify the representativeness of air sampling.
- S-11. The laboratories in which plutonium in a dispersible form may be used shall have exhaust ventilation systems separate from other building exhausts and shall provide dual HEPA filtering of the effluent air.
- S-12. Sealed Plutonium sources shall be subject to the leak testing and actions specified in the attached "License Condition for Leak Testing Sealed Plutonium Sources," dated April 1993. Plutonium alpha sources shall be subject to the actions specified in the attached "License Condition for Plutonium Alpha Sources," dated April 1993.
- S-13. The licensee shall prepare and submit to the Chief, Fuel Cycle Facilities Branch, Division of Fuel Cycle Safety and Safeguards, NMSS, U.S. Nuclear Regulatory Commission, Washington, DC 20555, a report whenever there is any new residential development within 1 mile around the site that constitutes a significant change in parameters that may be affected by the release of radioactive materials into the environment.
- S-14. Deleted by Amendment 14 dated August 3, 1990 (originally numbered S-23 in 1990 1992 and renumbered to S-14 in Amendment 23 dated October 7, 1993). The information in License Condition S-23 was incorporated into License Condition S-9 by adding the date of May 25, 1989; License Condition S-9 later became S-1.
- S-15. At the end of plant life, the licensee shall decontaminate the site and facilities, authorized as a place of use for special nuclear material, in accordance with the general decommissioning plan submitted by your letter dated July 25, 1986, and its supplement dated October 15, 1986, so that these facilities and grounds can be released for unrestricted use. The corporate commitment that funds will be made available for decommissioning the facility, provided by letter dated September 10, 1986, is hereby incorporated as a condition of the license.
- S-16. Release of equipment, facilities, or packages to the unrestricted area or to uncontrolled areas onsite shall be in accordance with the attached "Guidelines for Decontamination of Facilities and Equipment Prior to Release for Unrestricted Use or Termination of Licenses for Byproduct, Source, or Special Nuclear Material," dated April 1993.

NRC FORM 374A U.S. NUCLEAR REGULATORY COMMISSION	6
I	License Number SNM-696
	Docket or Reference Number 70-734
	Amendment No. 90

- S-17. Deleted by Amendment 37, September 1996. The SVA facility has been decommissioned and released for general use.
- S-18. Notwithstanding the statement in Section 4.2.1.4, Part II of the license, the trip levels will be readjusted after each monthly test of the criticality alarm system if the alarm point fails to activate within approximately 5 seconds, more than once out of four trials.
- S-19. Notwithstanding the statements in Section 4.2.1.4, Part II of the license, no material handling shall be allowed in any area in which the required criticality alarm system is inoperative.
- S-20. Deleted by Amendment 37, September 1996. The SVA facility has been decommissioned and released for general use.
- S-21. Deleted by Amendment 31 dated September 1995. Fuel elements were shipped back to the licensee on October 3, 1988.
- S-22. Deleted by Amendment 37, September 1996. The SVA facility has been decommissioned and released for general use.
- S-23. The licensee shall maintain and execute the response measures described in the Emergency Plan dated October 10, 1997, and supplements dated November 6, 1997; October 1998; and July 26, 2006; or as further revised by the licensee consistent with the provisions of 10 CFR 70.32(i).
- S-24. The licensee shall develop individual survey plans for each facility or group of laboratories and provide NRC a 30-day notification, prior to GA initiating a final survey, to allow the NRC to schedule in-process inspections/surveys if required.
- S-25. The licensee must submit for review and approval to NRC residual contamination and characterization data and planned decommissioning procedures for areas where:
 - 1. Decommissioning procedures will be required that have not been used by the licensee in previous decommissioning activities or have not been identified in the Site Decommissioning Plan dated October 11, 1996, as amended December 5, 1996; April 18, 1997; and January 15, 1998;
 - 2. Workers would be entering areas where surface contamination and radiation levels are significantly higher than routinely encountered during previous decommissioning operations;
 - 3. Procedures could result in significantly greater airborne concentrations of radioactive materials than have been present in previous decommissioning operations; or
 - 4. Procedures could result in significantly greater releases of radioactive material to the environment than those associated with previous decommissioning operations.

SG-8.1 Deleted by Amendment 37, September 1996. Not applicable under a possession only license.

SECTION 9.0 -- PHYSICAL PROTECTION REQUIREMENTS FOR FORMULA QUANTITIES OF STRATEGIC SPECIAL NUCLEAR MATERIAL

- SG-9.1 The licensee shall follow the measures described in the physical protection plan titled, "General Atomics' Fixed Site and Transportation Plan for the Protection of Special Nuclear Material of Low Strategic Significance" dated April 2003, and as it may be further revised in accordance with the provisions of 10 CFR 70.32(e) or 70.34.
- A. The licensee shall, nothwithstanding the provisions of any Commission regulation to the contrary, comply with the requirements described in the Interim Compensatory Measures (ICMs) for Category III Fuel Cycle Facilities enclosed in the letter from Mary T. Adams dated February 11, 2003. The licensee shall immediately start implementation of the ICM requirements and shall complete implementation no late than September 15, 2003.
 - B. 1. The licensee shall, within twenty (20) days of the date of Amendment 76, notify the Commission, (1) if it is unable to comply with any of the ICM requirements,
 (2) if compliance with any of the ICM requirements is unnecessary in its specific circumstances, or (3) if implementation of any of the ICM requirements would cause

NRC FORM 374A U.S. NUCLEAR REGULATORY COMMISSI	ON	9
	License Number SNM-696	
MATERIALS LICENSE SUPPLEMENTARY SHEET	Docket or Reference Number 70-734	
	Amendment No. 90	

the licensee to be in violation of the provisions of any Commission regulation or its license. The notification shall provide the licensee's justification for seeking relief from or variation of any specific requirement.

- 2. If the licensee considers that implementation of any of the ICM requirements would adversely impact safe operation of its facility, the licensee must notify the Commission, within twenty (20) days of the date of Amendment 76, of the adverse safety impact, the basis for its determination that the requirement has an adverse safety impact, and either a proposal for achieving the same objectives specified in the requirement in question, or a schedule for modifying the facilities to address the adverse safety condition. If neither approach is appropriate, the licensee must supplement its response to identify the condition as a requirement with which it cannot comply, with attendant justification as required in Condition B1.
- C. 1. The licensee shall, within twenty (20) days of the date of Amendment 76, submit to the Commission, a schedule for achieving compliance with each ICM requirement.
 - 2. The licensee shall report to the Commission when it has achieved full complicance with the ICM requirements.
- D. Notwithstanding any provision of the Commission's regulations to the contrary, all measures implemented or actions taken in response to this license condition shall be maintained until the Commission determines otherwise.

SECTION -10.0 -- TEMPORARY OR ONE TIME CONDITIONS

- SG-10.1 Deleted by Amendment 31, dated July 1995.
- SG-10.2 Deleted by Amendment 31, dated July 1995.
- SG-10.3 Deleted by Amendment 31, dated July 1995.
