Subject: Protect our communities from radioactive waste!

Sep 23, 2013

Allison McFarlane

Dear McFarlane,

How the U.S. stores our most hazardous waste, the radioactive fuel rods from nuclear reactors, concerns me deeply.

We should not license or re-license any reactor until it has been proven that we can successfully isolate this waste.

While we work on a solution, I am also concerned that many of our nuclear reactors have over-crowded fuel pools on site. These present safety threats to the communities and industries that surround the plants.

The NRC should take immediate action to reduce the number of fuel assemblies in the water-filled pools. Before transferring the fuel rods to cask storage, the cask storage needs to be examined and reinforced to be able to safely store the fuel rods particularly those that qualify as high burn up fuel. Hardened on-site storage of the casks should become the choice for storage.

I am also concerned about the sustainability of nuclear power.

The EIS needs to evaluate the true costs of nuclear power after the subsidies are stripped away. The long-term costs of decommissioning need to be considered as well. The ongoing costs to US taxpayers should be transparent in this EIS. Actually, true, long-term costs seem to me to be incalculable.

Finally, the EIS should consider the option of not making any nuclear waste at all. Just compare the environmental footprint of nuclear, from mining to long term waste disposal, to the far more modest footprints of renewables and energy efficiency.

Sincerely,

Sarah Mckee
