Director, Office of Nuclear Reactor Regulation
Attention: Mr. Darrell G. Eisenhut, Director
Division of Licensing
U. S. Nuclear Regulatory Commission
Washington, D.C. 20555

Gentlemen:

Subject: Docket No. 50-206
Pressurized Thermal Shock to Reactor Pressure Vessels
San Onofre Nuclear Generating Station
Unit 1

Your letter of August 21, 1981 required that we provide you with additional information regarding the San Onofre Unit 1 reactor vessel. A portion of that information was provided to you by our letter dated November 4, 1981. The remaining information is provided as an enclosure to this letter. In addition, by letter dated December 18, 1981, the NRC requested additional information and amplified requests in the August 21, 1981 letter. Responses to that information have also been included in the enclosure.

The enclosure provides the results of plant specific analyses that demonstrate the reactor vessel integrity will be maintained for the San Onofre Unit 1 vessel beyond its design lifetime. The analyses indicate that a vessel integrity safety concern does not exist through the end of plant life. Consequently, a plan defining remedial actions and schedules for resolution of this issue, as requested by your August 21, 1981 letter, is not warranted. However, as indicated in the enclosure, we will institute formal training on this issue as part of the operator requalification training program beginning in February, 1982.
