General Comment

A generic address of spent nuclear fuel storage is not acceptable considering the history and potential hazards that cannot be seen in future events. Neither should impacts on the environment be considered generic. Sensitive subjects such as these require specific and detailed rulings.

Companies that use nuclear fuel to produce electricity for profit should maintain strict chain of custody for the duration of its possession until permanent storage is established and carry liability for environmental and/or human issues that may evolve from future events.

Taxpayers should not bear the financial burden of a permanent storage facility. Power companies should be taxed with the entire responsibility of the life of spent fuel until it becomes non-hazardous.

Safer on site measures must be taken regarding temporary storage to avoid any and all environmental and human impact.
