**SCOPE**

SAN ONOFRE NUCLEAR GENERATING STATION  
1988 ANNUAL EMERGENCY PLAN EXERCISE

SCOPE

The annual emergency plan exercise will be conducted on October 26, 1988 between the hours of 8:00 am and 2:00 pm. The exercise will simulate an abnormal radiological incident at SONGS Unit 2. The response to the incident will be evaluated by the Nuclear Regulatory Commission (NRC).

The exercise will commence with a postulated plant condition which necessitates the declaration and escalation of emergency classes. This will require the ability to properly recognize and classify abnormal conditions within the plant in addition to making necessary notifications to plant personnel and offsite emergency response organizations. Personnel will be required to take appropriate actions to mitigate damage to the plant and protect the health and safety of the general public. Offsite agencies will participate in the exercise.

The following activities will be simulated during the exercise:

1. Activation of unaffected units' (Units 1 and 3) Emergency Response Facilities.
2. Protected Area and Owner Controlled Area (Plant and Site) evacuation, except for limited assembly. Accountability will be simulated.
3. Beach evacuation.
4. Public protective actions (sheltering and evacuation).
5. Community Alert Siren System actuation.
6. Emergency Broadcast System actuation.
7. Potassium iodide and protective clothing use in simulated contaminated areas (paper PCs will be used instead of cloth).
8. Silver zeolite cartridge use (charcoal cartridges will be used instead of silver zeolite).
9. Use of emergency response security measures.
10. Activation of plant equipment, with the exception of the sirens.
11. Recall of corporate personnel (key ESO personnel transported to EOF by helicopter).
12. Transportation of an injured worker to the hospital, if necessary.

**SAN ONOFRE NUCLEAR GENERATING STATION  
Unit 2**

**1988 Emergency Plan Exercise**

**OBJECTIVES**

SAN ONOFRE NUCLEAR GENERATING STATION  
1988 ANNUAL EMERGENCY PLAN EXERCISE

OBJECTIVES

A. ONSITE OBJECTIVES

1. Demonstrate the ability of on-shift and recalled personnel to recognize accident conditions, and to declare the appropriate emergency classification within 15 minutes of recognition.
2. Demonstrate notification procedures and communication capabilities to provide accurate event and follow-up notifications to offsite agencies within specified time limits using the new Yellow Phone System.
3. Demonstrate the ability of on-shift and recalled Emergency Response Personnel to conduct adequate turnovers and transfer of responsibilities in accordance with EPIPs and ESO Procedures.
4. Demonstrate the ability to transmit information between the TSC and the EOF without adversely affecting protective action recommendations for the general public in accordance with EPIPs and ESO Procedures.
5. Demonstrate the ability to transmit information between the TSC and the EOF without adversely affecting emergency classification in accordance with EPIPs and ESO Procedures.
6. Demonstrate the communication of radiological information by TSC Health Physics personnel to other emergency response personnel following TSC activation by updating status boards and reporting significant radiation monitor changes, field monitoring results and dose projections within 15 minutes of determination, consistent with other emergency response priorities.
7. Demonstrate the adequacy of SCE radiation monitoring team deployment to provide continuous radiological assessment without adversely affecting onsite or offsite protective action recommendations.
8. Demonstrate the ability to obtain and analyze in-plant radiological samples, in accordance with station procedures.
9. Demonstrate operation of the onsite emergency siren system and coordination of site PA announcements in accordance with EPIPs.
10. Demonstrate the assembly of selected site personnel at designated assembly areas in accordance with EPIPs and Security procedures.
11. Demonstrate OSC logging and issue of dosimetry, and the ability to accurately track and control exposure of emergency response personnel, without delaying emergency response teams involved in critical actions.

A. ONSITE OBJECTIVES (continued)

Page 2

12. Demonstrate contamination control at the OSC in accordance with Health Physics procedures and sound practices.
13. Demonstrate the debriefing of emergency response teams accurately within 15 minutes of return to the OSC, consistent with the dispatch of other teams.
14. Demonstrate EOF access control and the accountability of EOF personnel in accordance with ESO procedures.
15. Demonstrate radiological controls at the EOF in accordance with ESO procedures and sound Health Physics practices, including dosimetry issue and contamination control.
16. Demonstrate the ability to determine and implement appropriate measures for controlled recovery and reentry in accordance with the SONGS Emergency Plan and EPIPs.
17. Demonstrate controllers' control of exercise conduct, participation in player debriefings, and evaluation of players' responses in accordance with Drill Controller Program requirements.

B. OFFSITE OBJECTIVES

1. Demonstrate the adequacy of procedures and communication capabilities to notify and mobilize emergency response personnel in accordance with the offsite jurisdictions' emergency response plans.
2. Demonstrate the capability to fully activate and staff the Emergency Operations Centers (EOCs) to meet exercise objectives.
3. Demonstrate the ability to assess recommendations and disseminate information to the appropriate organizations, including recommendations concerning public protective action.
4. Demonstrate the ability to deploy field radiation monitoring teams, take measurements, and communicate with the Offsite Dose Assessment Center (ODAC).
5. Demonstrate ODAC status board updating of significant radiation monitor changes and field monitoring and dose projection results within 15 minutes of determination.
6. Demonstrate the ability to develop and issue Emergency Broadcast System (EBS) messages and coordinate release of EBS messages with the activation of the Community Alert and Notification System.
7. Demonstrate the ability to coordinate the dispatch of emergency workers including dosimetry issue.

1. Demonstrate the ability to perform offsite dose assessment projections necessary to provide advance warning to local, state, and federal agencies, and to the general public.
2. Demonstrate the adequacy of the decision-making process between the EOF and offsite EOCs in coordinating protective actions towards the general public.
3. Demonstrate the ability to activate and operate the Emergency News Center (ENC) and coordinate the dissemination of timely and accurate information to the news media by means of press releases and news briefings.

Unit 2**

**1988 Emergency Plan Exercise**

**SUMMARY**

SAN ONOFRE NUCLEAR GENERATING STATION

1988 ANNUAL EMERGENCY PLAN EXERCISE

SUMMARY

INITIAL CONDITIONS

Unit 2, which is operating at full power, was recently returned to service from an outage for steam generator tube repairs. While shutdown, the RCS was drained to midloop, and steam generator primary-side manways were open. Since the return to power, RCS activity increased to near the Technical Specification limit. Normal (minor) RCS leakage has resulted in equilibrium containment radiation of about 200 mR/hr.

About an hour before the drill, containment radiation increased to about 1 R/hr, while no increase in RCS leakage could be identified. Subsequent investigation (after the drill) would reveal that a tool dropped in the RCS during the steam generator work propagated extensive damage in the reactor, loosening other parts and ultimately causing 5% fuel failure.

Chemistry sampling was initiated to determine if RCS activity had increased (the Letdown monitor is out of service). Using the Post Accident Sampling System, a sample was drawn, and counting started at 0800. Counting is expected to be done by about 0830. Chemistry personnel are pre-staged at the Radiochemistry Lab, and briefed on sampling and radiological conditions.

Train A HPSI pump 2P017 is out of service for replacement of the outboard motor seal. Repairs are nearly finished; the pump will need to be inspected by a foreman, the clearance released, and observed when the seal is run in. Players are pre-staged at the pump and briefed on this activity.

Diesel generator 2G003 is operating on line for a one-hour surveillance run. Operators at the simulator are briefed on the diesel status.

Electricians are working on the Control Room annunciator system, searching for a DC ground. Players are pre-staged and briefed at Panel 2L040-04R.

Management briefings are staged prior to the start of the drill to apprise personnel of the changing plant conditions. Briefings are limited to information that would normally be available through morning meetings and reports from staff personnel.

LOSS OF CONTROL ROOM ANNUNCIATORS

At 0800, an electrician working on the annunciators causes a short, which trips the power supply and leaves the control room without annunciators. The worker's hand is burned by the short, and he is injured falling from a ladder.

After 5 minutes, the loss of annunciators meets the criteria of event code D2-3 for declaration of an Alert. Notification of offsite agencies is initiated by the Shift Communicators at the simulator. Unit 1 Shift Communicators are contacted to assist with PA announcements, siren activation and recall of Emergency Response Personnel.

Emergency Service Officers (ESOs) are notified of the injured worker via PAX 86911 before emergency announcements are made. The electrician is given first aid by ESOS at the scene, and placed in the ambulance for transport to the Mesa Medical Facility. The ambulance is stopped at the PA fence by the controller, and further transport is simulated.

Unit 2/3 Emergency Response Facilities are activated by personnel recalled from work locations by about 0830. The Station Emergency Director assumes Emergency Coordinator duties following turnover from the Shift Superintendent by phone.

The EOF is activated by Emergency Support Organization personnel recalled from locations in San Clemente, by about 0900. Emergency Coordinator duties are turned over to the Corporate Emergency Director at about 0915.

Annunciators may be restored to service any time after 0840, when participants have walked through appropriate actions. Restoration requires collecting and walking through the use of cleanup and circuit testing equipment, and coordination between repair technicians and Operations. Personnel assigned to this activity may be kept on the job when the Alert is declared, rather than allowed to report to the OSC. If they remain in the field, OSC team tracking should reflect their assignments and work status.

#### 5% FAILED FUEL

At 0840, RCS sample analysis results are obtained by technicians in the Radiochemistry Lab, indicating 35 uCi/cc DE I-131. The activity level represents 5% failed fuel, which meets the Alert criteria of event code C2-1.

Operations response to the sample results is to initiate plant shutdown. Drill controllers ensure that the rate of power decrease does not exceed 15%/hour, to maintain consistency with prepared radiological data.

Sample results are received about the same time, or shortly after, Emergency Response Facilities are being activated. Station Technical should evaluate the extent of fuel damage, and the potential for a release to atmosphere. Health Physics should evaluate the effects of increased RCS activity on plant radiological conditions.

#### LOSS OF 1E 4KV BUS

At 0910, Train B 1E 4kV bus 2A06 trips due to a ground fault. This also trips diesel generator 2G003 output breaker. The emergency class is not affected. Response is to investigate and initiate bus repairs.

Personnel at 2A06 find ground fault relay targets tripped. Investigation reveals a buswork fault due to an enclosure panel, which fell and contacted the bus. Repairs should be initiated to remove and secure the fallen bus enclosure panel, and to inspect and megger the bus. Inspection shows the bus bars are damaged too severely to be returned to service. Plans should be made for replacing the bus bars, which will delay repairs until the parts can be ordered and delivered from the vendor. There are no ESF loads needed immediately, so probably no other

emergency repairs will be attempted on 2A06 at this time.

#### STEAM GENERATOR TUBE RUPTURE AND LOSS OF SI

At 0945, a tube ruptures in steam generator E089, resulting in rapid RCS depressurization and initiation of safety injection. The tube rupture meets the Site Area Emergency criteria of event code B3-1. Because of the existing fuel damage, and the release path that exists until the affected steam generator is isolated, it is possible that a General Emergency may be declared. If necessary, a contingency cue card will be used to limit the emergency class to Site Area Emergency, to ensure the objective concerning assembly of site personnel can be evaluated.

HPSI pump 2P018 starts in response to the safety injection signal, then trips due to a faulty breaker. This is the swing pump, aligned to Train A because the normal Train A pump, 2P017, is out of service for repairs. The Train B pump, 2P019, does not operate because of the loss of ESF bus 2A06. This leaves the unit with no high pressure safety injection.

#### MAIN STEAM LEAK

At 1030, a steam leak occurs at the main steam line connection with the steam supply to the auxiliary feedwater pump turbine. The leak cannot be isolated, and results in an uncontrolled release of fission products to the environment. The conditions meet the General Emergency criteria of event code B4-2.

Radiological conditions in the area of the steam leak are highly contaminated, with exposure rates as high as 10 R/hour whole body.

#### REPAIRS

Emergency repair activities are directed primarily to restoring a HPSI flow. This can be done by repairing the breaker to 2P018, by returning 2P017 to service, or by restoring power to bus 2A06. The fastest response is to return 2P017 to service, which requires picking up the clearance and aligning the pump for service. Any of these repairs will be successful when the appropriate steps have been walked through, including retrieval of necessary parts and tools.

At about 1200, main steam pressure decreases to 0 psig, and the release is terminated. The steam leak may be patched by walking through appropriate steps, and staging the necessary equipment at the repair location. This may be started before steam pressure reaches 0 psig.

#### HAZARDOUS MATERIAL SPILL

At 1215, a Security officer reports a gasoline spill at the Mesa gasoline pumps. Emergency Service Officers respond to contain and clean up the spill. Upon arrival, it is found that some gasoline has leaked into the sewer drain system. Efforts should be made to determine the amount of gasoline spilled, and the location of the sewer outfall.

RECOVERY

At 1300, cue cards are given to NERT and ESO management to initiate recovery planning. Personnel should review EPIP, ESO Manual and Emergency Plan requirements for recovery; identify equipment, personnel and other resources needed to restore or stabilize plant conditions; and discuss organizational needs to manage the recovery.

The exercise may be terminated when all objectives have been evaluated, at approximately 1400.

**SEQUENCE OF EVENTS**

SAN ONOFRE NUCLEAR GENERATING STATION  
1988 EMERGENCY PLAN EXERCISE

SEQUENCE OF EVENTS

CUE CARD	TIME	LOCATION	EVENT DESCRIPTION	ANTICIPATED RESPONSE
1	Pre-drill	All drill participants	Initial conditions: 100% power operation; increasing RCS activity; HPSI pump 2P017 out of service for seal repairs. Diesel Generator 2G003 operating for 1 hour surveillance run. Electricians are working on DC ground in annunciator system.	a. Review initial conditions.
	Pre-drill	Simulator Instructor	Initialize simulator to IC-20.	
1A	Pre-drill	Operations personnel at Simulator	Pre-shift briefing	a. Review initial conditions; assume responsibility for plant operations.
1B	Pre-drill	Maintenance personnel at 2P017	Briefing on status of repairs to HPSI pump.	a. Review initial conditions.
1C	Pre-drill	Personnel at Electrical Panel 2L040-04R	Briefing on search for annunciator ground in panel 04R.	a. Review initial conditions.
1D	Pre-drill	Chemistry, HP personnel in Radio-Chem Lab	Briefing on RCS sampling technique and conditions.	a. Review initial conditions.
1E	Pre-drill	Station Management	Briefing on changing plant conditions.	a. Review initial conditions.
0800	Simulator Instructor		Activate malfunction for loss of all Control Room annunciators.	a. Declare Alert per event code D2-3. b. Initiate recall; activate all ERFs. c. Initiate troubleshooting and repair of control room annunciators. d. Send repair teams back to 2P017.
2	0800	Personnel at Panel 2L040-04R	While searching for a DC ground in the annunciator system, electrician receives an electrical shock and falls from ladder; details of injury.	a. Call 86911 for emergency medical assistance. b. Report the incident to the Control Room. c. Initiate cleanup and repairs.

## SEQUENCE OF EVENTS

PAGE 2

- 3 ~ 0810 ESOs at Panel 2L040-  
(upon arrival) 04R Medical indications of injured worker.  
a. Provide first aid to injured worker.
- 4 0820 Emergency Coordinator Declare Alert per event code D2-3.  
a. Notify offsite agencies.
- 5 ~0820 Operator at Panel D5P4 Annunciator power supply breaker is tripped, and continues to trip after resetting, due to short in circuit.  
a. Report finding to Control Room.
- 6 0840 HP Count Room RCS sample results indicate 5% failed fuel.  
a. Initiate shutdown (about 15% per hour).
- 0910 Simulator Instructor Initiate malfunction to trip 1E 4 kV bus 2A06 from ground relay.  
a. Send team to investigate and repair.
- 7 ~ 0920 Operator at 2A06 Bus ground relay target, conditions in area (smell of burned insulation); 2A06 supply breaker and 2G003 output breaker overcurrent relay targets down.  
a. Report findings to Control Room, OSC.
- 8 ~ 0935 Electricians at 2A06 (upon arrival) Bus conditions upon inspection (relays, fallen bus enclosure panel, burn marks, megger indications if attempted).  
a. Report results to OSC.  
b. Initiate parts retrieval and repairs.
- 0945 Simulator Instructor Initiate malfunctions for Steam Generator Tube Rupture on E089; HPSI pump 2P018 trip resulting in total loss of high pressure Safety Injection.  
a. Declare SAE per event code B3-2.  
b. Initiate PA evacuation and assembly.  
c. Initiate repair of 2P018 and 2A06.
- 9 ~ 0955 Operator at 2P018 (upon arrival) breaker No apparent cause for trip of HPSI pump 2P018 A Train supply breaker; breaker trips again if reclose is attempted.  
a. Report findings to Control Room, OSC.
- 10 1000 Emergency Coordinator Declare Site Area Emergency per event code B3-2.  
a. Notify offsite agencies; consider PARS.
- 11 ~ 1005 Repair Team at 2P018 breaker Upon investigation, overcurrent relay is found to be defective.  
a. Report findings to OSC.  
b. Replace opening coil.
- 1030 Simulator Instructor Initiate malfunction for failure at junction of 26" steam header and 6" supply line to steam-driven AFWP.  
a. Declare General Emergency per event code B4-2.
- 12 1045 Emergency Coordinator Declare General Emergency per event code B4-2.  
a. Notify offsite agencies; consider PARS.

**Guidelines for Exercise Conduct**

SAN ONOFRE NUCLEAR GENERATING STATION  
OCTOBER 26, 1988, EMERGENCY PLAN EXERCISE  
GUIDELINES FOR EXERCISE CONDUCT

A. All Emergency Response Personnel

1. Supervisors are responsible for designating Exercise participants. All groups with emergency duties at Units 2/3 must be represented in the Exercise.
2. All site personnel must follow instructions given by PA announcement before and after siren activation. Certain personnel will be directed to respond; others will be directed to continue with their normal work. Any time you hear sirens, proceed to an assembly area unless directed otherwise by PA announcements.
3. The PA system shall be restricted to Exercise use, except for operations and emergencies.
4. Exercise activities shall be conducted to minimize interference with ongoing plant operations.
5. All security procedures remain in effect during the Exercise.
6. Onsite participants shall be pre-staged at the Unit 2 Control Room Simulator, the Radiochemistry Lab, HPSI pump 2P017 and electrical panel 2L040-04R. Other onsite participants should respond from normal work locations.
7. Emergency Support Organization personnel shall be recalled from the General Office and other designated locations.
8. For Exercise purposes, contact the Control Operator at PAX 88493, and the Common Control Operator at PAX 88492. Contact the Operations Leader at PAX 88492 or Ivory Phone ext. 24.
9. Carry out emergency response assignments as follows:
  - a. Walk through the assignment, performing such steps as retrieving tools, equipment and procedures; reporting to supervision and the Simulator Control Room, and wearing protective gear;
  - b. Do not manipulate plant equipment or controls, unless directed by a drill controller;
  - c. Observe all security, HP, safety and administrative controls;
  - d. Assume equipment works normally, unless told otherwise by a controller or indicated by drill guidelines, props or signs;

**A. All Emergency Response Personnel (continued)**

- e. Describe all your actions and communications to the controller observing your response.
- 10. All announcements and notifications should be preceded and followed by the statement, "THIS IS A DRILL." If communication lines are kept open for extended periods, periodically repeat the statement.
- 11. Extra ERPs released from Emergency Response Facilities during the drill should respond as non-ERPs for the remainder of the drill.
- 12. Siren activations must be preceded and followed by Exercise announcements on the site and perimeter (beach) PA systems.
- 13. Participants shall remain at Exercise locations for debriefing by team leaders and controllers following the Exercise. Comments should be recorded on the Exercise Participant Comments form.
- 14. Respirators and protective clothing shall be used in accordance with procedures, except when otherwise directed by Exercise controllers.

**B. Health Physics Support**

- 1. Use paper PCs instead of cloth to avoid depletion of emergency kits and emergency stores.
- 2. Do not use E-Kit Zeolite cartridges.
- 3. SCBAs shall be used for response in simulated airborne radioactivity areas, unless directed otherwise by Exercise controllers.
- 4. Perform all procedural actions for taking air samples, smears, and dose rate surveys.
- 5. Mark survey results with the word "DRILL", and turn them in to the Exercise controller at the end of the Exercise.
- 6. The count room technician shall maintain a log of Exercise samples and turn it in to the OSC controller at the end of the Exercise.

**C. Security Support**

1. If plant or site evacuation is required, observe all procedure requirements, using actual In-Card Report.
2. If beach evacuation is required, simulate beach siren activation.

**D. EOF/TSC Technical Personnel**

1. Online simulator data will be available on PCs located in each Emergency Response Facility. Data can be viewed on the screen and printed on local printers. This system is used in lieu of the CFMS for plant data.

**E. Shift Communicators**

1. Two Units 2/3 Shift Communicators (SC) shall be pre-staged at the simulator. Other participating SCs shall be standing by at their normal work locations.
2. The simulator SC shall be lead SC for all emergency response functions until instructed by the controller to turn over responsibilities to the onsite SCs.
3. Following SC turnover, the simulator SC shall return to the TSC 2/3 to resume lead SC functions.
4. For drill purposes, contact the simulator SC at 88494.
5. If initial recall is required, perform an actual recall for station personnel.
6. For siren activation, call the Control Operators at 86201, 86301, 86401.

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

SIMULATOR INSTRUCTIONS

TIME: Pre-drill (approximately 0700)

DISTRIBUTION: N/A

LOCATION: Unit 2 Control Room Simulator

CONTROLLER  
INSTRUCTIONS:

1. Establish drill initial conditions on the simulator as follows:
  - a. Initialize Simulator to IC-20.
  - b. Lock out HPSI pump 2P017 (malfunction EC08C) with DC power off.
  - c. D/G 2G003 operating unloaded for 1 hour surveillance run.
  - d. Override ON alarm window 58A59 "ANNUNCIATOR GROUND."

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 1A

TIME: Pre-drill (approximately 0715)

DISTRIBUTION: Operations Supervision and Control Room Personnel  
LOCATION: Unit 2 Control Room Simulator

CONTROLLER  
INSTRUCTIONS:

1. Pre-stage personnel in the Simulator for briefing
  - a. Review the Guidelines for Drill Conduct, emphasizing the rules for carrying out emergency assignments.
  - b. Have players sign attendance sheets.
  - c. Demonstrate the PC Radiation Monitor Display.
2. Brief personnel on initial plant conditions
  - a. Allow personnel to inspect the control boards and review the shift relief status sheets and STA Morning Report.
  - b. Describe the sequence of events up to this point:

<u>TIME</u>	<u>EVENT</u>
0415	Alarm annunciator 50A51, "VIBRATION AND LOOSE PARTS MONITOR SYSTEM TROUBLE", was received in the Control Room. Inspection of the Vibration and Loose Parts Monitor revealed an apparently valid loose parts alarm originating in the core barrel. Listening to the audio channel on the Vibration and Loose Parts Monitor revealed a repetitive noise.
0430	Containment activity was noticed to be increasing rapidly, from an earlier steady state value of about 200 mR/hour to over 1 R/hour on 2RT 7820 and 7848. There was no evidence of RCS leakage. Leak rate calculations were initiated.
0510	Leak rate calculations failed to indicate any RCS leakage. The chemistry foreman was called to request immediate RCS sampling and analysis. The cause of the increased containment activity was suspected to be some damage to the fuel, possibly from loose parts in the reactor.

CUE CARD # 1A  
(continued)

- 0530 When sample flow was initiated in the Radiochemistry Lab by the Chemistry Technician, the Sample/PASS Isolation Monitors 2/3 RT 7838 and 7839 immediately alarmed and closed the sample isolation valves. The Chemistry Technician left the area and reported the event to the Chemistry Foreman.
- 0600 A tailboard was conducted with Chemistry, Health Physics and Operations to better plan the RCS sampling. It was determined to continue sampling at the PASS Lab, using continuous HP coverage.
- 0700 RCS sampling was initiated for the second time, at the PASS lab. When flow was initiated, the Sample/PASS Isolation Monitors 2/3 RT 7838 and 7839 both went off scale high. An unseparated PASS liquid sample, diluted to 1 ml, was collected, which read approximately 15 mR/hour contact. The sample was sent to the Radiochemistry Lab for isotopic analysis.

The RCS sample is now counting, and results are expected at about 0840.

3. Encourage players to pursue updated information as they consider appropriate, WHEN the start of the drill is signalled. Until then, no contact should be made with drill participants outside the simulator.
4. At 0800, tell players the drill is started.

SAN ONOFRE NUCLEAR GENERATING STATION  
1988 EMERGENCY PLAN EXERCISE  
CUE CARD # 1B

TIME: Pre-drill (approximately 0745)

DISTRIBUTION: Maintenance Personnel  
LOCATION: HPSI Pump 2P017

CONTROLLER

INSTRUCTIONS:

1. Pre-stage maintenance personnel at HPSI pump 2P017
  - a. Personnel have removed PCs and are ready to return to the HP Control Point at any time.
  - b. The work area has been decontaminated and the step-off pad removed.
2. Describe the status of HPSI pump 2P017 repairs
  - a. Give the clearance stub for 2P017 to the machinist.
  - b. The inboard pump seal has just been replaced and reassembled.
  - c. The motor is recoupled.
  - d. The pump is ready to be cleared off.
  - e. The foreman has not inspected the work.
  - f. The new seal has not been run in.
3. Control the timing of the briefing
  - a. Complete briefing before the emergency siren and PA announcements are made.
  - b. Keep the players at the work location until the siren is activated (between 0815 and 0830).
  - c. To delay players at the work location, you can review drill guidelines (describe the rules for carrying out emergency response assignments), have them sign attendance sheet, and have them describe what their next steps will be.
4. Allow players to respond to the emergency siren and PA announcements as they normally would.

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 1C

TIME: Pre-drill (Approximately 0745)

DISTRIBUTION: Maintenance Personnel

LOCATION: Electrical Panel 2L040-04R

CONTROLLER

INSTRUCTIONS:

1. Pre-stage maintenance personnel at Electrical Panel 2L040-04R.
  - a. Have personnel assemble appropriate tools and equipment.
2. Describe the status of the search for the DC ground.
3. Control the timing of the briefing
  - a. Review drill guidelines (describe the rules for carrying out emergency response assignments), have them sign attendance sheet, and have them describe what their next steps will be.
  - b. Complete briefing before 0800, to allow Cue Card #2 to be delivered at appropriate time.

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 1D

TIME: Pre-drill (approximately 0730)

DISTRIBUTION: Chemistry, HP Technicians

LOCATION: Radiochemistry Lab

CONTROLLER

INSTRUCTIONS:

1. Pre-stage personnel in Unit 2/3 Radiochemistry Lab for briefing
  - a. Include drill Chemistry and Health Physics technicians and foremen.
  - b. Review rules for carrying out emergency response assignments and have players sign attendance sheets.
  - c. Encourage players to take notes during briefing.
2. Describe the sequence of events up to this point:

<u>TIME</u>	<u>EVENT</u>
0510	The Control Room Supervisor called the Chemistry Foreman, to request immediate RCS sampling and analysis. The basis for the request was rapidly increasing containment activity (from about 200 mR/hour to over 1R/hour), with no evidence of increased RCS leakage. The cause of the increased containment activity was suspected to be some damage to the fuel, possibly from loose parts in the reactor. This is supported by a loose parts monitoring system alarm, which was received at 0415 this morning.
0530	When sample flow was initiated in the Radiochemistry Lab by the Chemistry Technician, the Sample/PASS Isolation Monitors 2/3 RT 7838 and 7839 immediately alarmed and closed the sample isolation valves. The Chemistry Technician left the area and reported the event to the Chemistry Foreman.
0600	A tailboard was conducted with Chemistry, Health Physics and Operations to better plan the RCS sampling. It was determined to continue sampling at the PASS Lab, using continuous HP coverage.
0700	RCS sampling was initiated for the second time, at the PASS lab. When flow was initiated, the Sample/PASS Isolation Monitors 2/3 RT 7838 and 7839 both went off scale high.

CUE CARD # 1D  
(continued)

An unseparated PASS liquid sample, diluted to 1 ml, was collected, which read approximately 15 mR/hour contact. The sample was sent to the Radiochemistry Lab for isotopic analysis.

The RCS sample is now counting, and results are expected at about 0840.

4. Inform the Chemistry Foreman that he has briefed his management, Operations supervision, and HP supervision, of the RCS sampling evolution up to this point.
5. Direct personnel involved in the briefing to wait for sample results, or return to other work locations, as they consider appropriate.
6. Tell personnel they are not to take further drill actions until they are contacted by other participants, or notified the drill has started by PA announcements or by a controller.
7. Allow personnel to respond to contacts by other participants, or to PA announcements, any time after 0800.

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 1E

TIME: Pre-drill (approximately 0730)

DISTRIBUTION: Station Management  
LOCATION: AWS Building

CONTROLLER  
INSTRUCTIONS:

1. Brief personnel at normal work locations
  - a. Review the Guidelines for Drill Conduct, emphasizing the rules for carrying out emergency assignments.
  - b. Have players sign attendance sheets.
2. Describe the sequence of events up to this point:

<u>TIME</u>	<u>EVENT</u>
0415	Alarm annunciator 50A51, "VIBRATION AND LOOSE PARTS MONITOR SYSTEM TROUBLE", was received in the Control Room. Inspection of the Vibration and Loose Parts Monitor revealed an apparently valid loose parts alarm originating in the core barrel. Listening to the audio channel on the Vibration and Loose Parts Monitor revealed a repetitive noise.
0430	Containment activity was noticed to be increasing rapidly, from an earlier steady state value of about 200 mR/hour to over 1 R/hour on 2RT 7820 and 7848. There was no evidence of RCS leakage. Leak rate calculations were initiated.

0530	When sample flow was initiated in the Radiochemistry Lab by the Chemistry Technician, the Sample/PASS Isolation Monitors 2/3 RT 7838 and 7839 immediately alarmed and closed the sample isolation valves. The Chemistry Technician left the area and reported the event to the Chemistry Foreman.
0600	A tailboard was conducted with Chemistry, Health Physics and Operations to better plan the RCS sampling. It was

CUE CARD # 1E  
(continued)

determined to continue sampling at the PASS Lab, using continuous HP coverage.

0700 RCS sampling was initiated for the second time, at the PASS lab. When flow was initiated, the Sample/PASS Isolation Monitors 2/3 RT 7838 and 7839 both went off scale high. An unseparated PASS liquid sample, diluted to 1 ml, was collected, which read approximately 15 mR/hour contact. The sample was sent to the Radiochemistry Lab for isotopic analysis.

The RCS sample is now counting, and results are expected at about 0840.

3. Direct personnel not to take response actions until contacted by other drill participants, or notified of an emergency (exercise) by PA announcements or recall.
4. Allow personnel to respond to announcements or recall any time after 0800.

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

SIMULATOR INSTRUCTIONS

TIME: 0800

DISTRIBUTION: N/A

LOCATION: Unit 2 Control Room Simulator

CONTROLLER  
INSTRUCTIONS:

1. Activate malfunction for loss of all Control Room annunciators (ED11).

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 2

TIME: 0800

DISTRIBUTION: Electricians

LOCATION: Electrical Panel L040-04R

CONTROLLER

INSTRUCTIONS:

1. Inform the uninjured electrician that his coworker has received a severe shock while searching for DC ground in annunciator system.
2. The worker fell off the ladder after being shocked. He is conscious and complaining that his back hurts. He has an electrical burn to his right hand.
3. Circuit is shorted and panel damaged by smoke.
4. Encourage the players to respond as they would to an actual incident.
5. Instruct him to report the damage to the Control Room and request emergency medical treatment if he fails to do so (call Simulator Control Operator at 88493).

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 3

TIME: - 0810 (upon arrival)

DISTRIBUTION: ESOs

LOCATION: Electrical Panel L040-04R

CONTROLLER

INSTRUCTIONS:

1. Provide the following medical indications of the injured worker, when patient is surveyed:

- a. Primary survey results:

Patient has an open airway, is breathing and has irregular pulse.

- b. Secondary survey results:

HEART BEAT: pulse 100 & irregular

RESPIRATIONS: 12

SKIN: NORMAL

EYES: PEARL

RESTLESS AND IRRITABLE.

BURN TO RIGHT HAND. NO EXIT BURN.

TENDERNESS TO LOWER BACK.

BLOOD PRESSURE: 190 over 105

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 4  
(Contingency)

TIME: 0820 (if required)

DISTRIBUTION: Emergency Coordinator

LOCATION: Unit 2 Control Room Simulator

SIMULATED  
CONDITIONS:

1. THIS IS A DRILL
2. Declare an Alert per event code D2-3.
3. THIS IS A DRILL

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 5  
(contingency)

TIME: ~ 0820 (Upon arrival)

DISTRIBUTION: 42 Operator  
LOCATION: D5P4 Electrical Panel

CONTROLLER  
INSTRUCTIONS:

1. If Operator is sent to inspect/reset annunciator power supply breaker, provide the following information when appropriate actions have been taken:
  - a. The breaker is tripped.
  - b. It continues to trip after resetting.

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 6

TIME: 0840

DISTRIBUTION: Chemistry Technician  
LOCATION: Radiochemistry Lab

CONTROLLER

INSTRUCTIONS:

1. Inform the Technician that the RCS sample analysis is completed.
2. Give the sample results (Printout of Unit 2 RCS Unseparated Liquid Activity Check and Summary of Nuclide Activity) to the Technician.
3. Tell the Technician to carry out the appropriate response.
4. If the results are not reported to the Shift Superintendent by 0845, prompt the action.

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

SIMULATOR INSTRUCTIONS

TIME: 0910

DISTRIBUTION: N/A

LOCATION: Unit 2 Control Room Simulator

CONTROLLER  
INSTRUCTIONS:

1. Activate malfunction for loss of 1E 4 kV bus 2A06 (ED03B).

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 7

TIME: - 0920 (Upon arrival)

DISTRIBUTION: Operator

LOCATION: 1E 4 KV Bus 2A06

CONTROLLER

INSTRUCTIONS:

1. Ensure the operator reads the signs about the smell of burned insulation.
2. If the operator asks, tell him there is no smoke in the room.
3. The following drill signs are placed in the switchgear room:

"It smells like burned insulation in the room," inside both doors to the room;

"151N Overcurrent Relay Target is Dropped," in front of breaker 152-2A0618 (4 KV Bus 2A06)

"159G High Ground Relay Target is Dropped," in front of breaker 152-2A0613 (Diesel Generator 2G003)
4. If the operator resets all overcurrent relays, tell him the diesel generator breaker closes and trips again, with the same overcurrent relay operation.

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 8

TIME: ~ 0935 (Upon arrival)

DISTRIBUTION: Electricians

LOCATION: 1E 4 kV Bus 2A06

CONTROLLER

INSTRUCTIONS:

1. Ensure the players read the signs about the smell of burned insulation.
2. If a player asks, tell him there is no smoke in the room.
3. The following drill signs are placed in the switchgear room:
  - "It smells like burned insulation in the room," inside both doors to the room;
  - "151N Overcurrent Relay Target is Dropped," in front of breaker 152-2A0618 (4 kV Bus 2A06)
  - "159G High Ground Relay Target is Dropped," in front of breaker 152-2A0613 (Diesel Generator 2G003)
4. If the players walk through the steps to megger the bus before they remove the fallen switchgear panel from the bus conductor, give them indications of a phase A ground.
5. If players walk through the steps to open the switchgear enclosure to inspect the bus conductors, inform them of the following conditions:
  - a. An internal piece of enclosure paneling has fallen onto the phase A conductor behind the supply breaker 152-2A0618 from transformer 2XR2.
  - b. There are deep burns on about 10 square inches of the conductor. Most of the conductor bar has been burned away at the location of the fault.
6. If bus repairs are made, check with the drill coordinator (Cyrus Anderson) before allowing the bus to be re-energized.

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

SIMULATOR INSTRUCTIONS

TIME: 0945

DISTRIBUTION: N/A

LOCATION: Unit 2 Control Room Simulator

CONTROLLER

INSTRUCTIONS:

1. Activate the malfunction for Steam Generator Tube Rupture on E089 (SG02B at 35% severity).
2. Approximately 15 seconds after HPSI pump 2P018 starts, activate the malfunction to trip it (EC08D).

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 9

TIME: ~ 0955 (Upon arrival)

DISTRIBUTION: Operator

LOCATION: HPSI Pump 2P018 A Train Supply Breaker 2A0409

CONTROLLER

INSTRUCTIONS:

1. Ensure the operator reads the signs about breaker relay indications.
2. If the operator resets the breaker and attempts to close it, tell him that it trips again with the same indications.
3. The following sign is placed in the switchgear room:

"Breaker 152-2A0409 (HPSI Pump P018) Green Light Is On; 150/151 A Phase Overcurrent Relay Target Is Dropped."

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 10  
(Contingency)

TIME: 1000 (if required)

DISTRIBUTION: Emergency Coordinator

LOCATION: Emergency Operations Facility

PLAYER

INSTRUCTIONS:

1. THIS IS A DRILL
2. Declare a Site Area Emergency per event code B3-2.
3. THIS IS A DRILL

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 11

TIME: ~ 1005 (Upon arrival)

DISTRIBUTION: Electricians and Test Technicians

LOCATION: HPSI Pump 2P018 A Train Supply Breaker 2A0409

CONTROLLER

INSTRUCTIONS:

1. Ensure players read the signs about breaker relay indications.
2. The following sign is placed in the switchgear room:

"Breaker 152-2A0409 (HPSI Pump P018) Green Light Is On; 150/151 A Phase Overcurrent Relay Target Is Dropped."
3. If the players walk through the steps to megger the breaker load conductors, give them open circuit indications on all phases.
4. If the players check the overcurrent relays on phase B, give them the failure indications due to a loose screw shorting the relay mechanism.
5. Call the simulator instructor at PAX 88490 if the breaker control circuitry is repaired; the malfunction must also be reset at the simulator.

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

SIMULATOR INSTRUCTIONS

TIME: 1030

DISTRIBUTION: N/A

LOCATION: Unit 2 Control Room Simulator

CONTROLLER  
INSTRUCTIONS:

1. Activate the malfunction for failure of steam supply piping to the steam-driven Aux Feedwater Pump (MS05B at 5% severity).

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 12  
(Contingency)

TIME: 1045 (If Required)

DISTRIBUTION: Emergency Coordinator

LOCATION: Emergency Operations Facility

PLAYER

INSTRUCTIONS:

1. THIS IS A DRILL
2. Declare a General Emergency per event code B4-2.
3. THIS IS A DRILL

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 13

TIME: 1100

DISTRIBUTION: Offsite Liaison

LOCATION: Emergency Operations Facility

CONTROLLER

INSTRUCTIONS:

1. Tell the Offsite Liaison that State Parks has passed the following information to him:
  - a. A sailboat race from Dana Point to Oceanside is underway.
  - b. Approximately 100 boats departed Dana Point at 1030.

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 14

TIME: 1200

DISTRIBUTION: Security Radio Channel  
LOCATION: Mesa Gasoline Pumps

CONTROLLER  
INSTRUCTIONS:

1. Broadcast the following information over the Security Radio Channel:
  - a. This is a drill.
  - b. You are a Security Officer at the Mesa gasoline pumps.
  - c. While using the gas pump, the hose broke.
  - d. A large spill of gasoline ensued.
  - e. The pump is now off, but there is gasoline on the ground and running towards the sewer.
2. Set up a water spill on the ground to simulate the gasoline spill.

SAN ONOFRE NUCLEAR GENERATING STATION  
1988 EMERGENCY PLAN EXERCISE  
CUE CARD # 15

TIME: ~ 1215 (Upon Arrival)

DISTRIBUTION: Hazardous Material Personnel  
LOCATION: Mesa Gasoline Station

CONTROLLER

INSTRUCTIONS:

1. Describe the conditions of the spill to personnel when they arrive:
  - a. The pump is off.
  - b. Inform them that the water spill on the ground represents gasoline.
2. Tell them to respond to the spill as they would an actual gasoline spill.

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 16A

TIME: 1300

DISTRIBUTION: Emergency Coordinator  
LOCATION: Emergency Operations Facility

PLAYER

INSTRUCTIONS:

1. THIS IS A DRILL
2. Initiate Recovery actions.
3. THIS IS A DRILL

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 16B

TIME: 1300

DISTRIBUTION: Station Emergency Director  
LOCATION: Technical Support Center

PLAYER

INSTRUCTIONS:

1. THIS IS A DRILL
2. Initiate Recovery actions.
3. THIS IS A DRILL

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

CUE CARD # 17

TIME: 1400

DISTRIBUTION: Emergency Coordinator  
LOCATION: Emergency Operations Facility

PLAYER

INSTRUCTIONS:

1. The Exercise may be terminated.

SAN ONOFRE NUCLEAR GENERATING STATION  
Unit 2

1988 Emergency Plan Exercise

Instructions to Controllers

SAN ONOFRE NUCLEAR GENERATING STATION

1988 EMERGENCY PLAN EXERCISE

INSTRUCTIONS TO EXERCISE CONTROLLERS

A. Before the Exercise

1. Read the Exercise Summary and Sequence of Events to understand cue card distribution and the anticipated responses.
2. Read the Guidelines for Exercise Conduct to understand what responses are to be simulated, and how far actual responses are to be carried.
3. Review procedures to be implemented by participants you will be observing.
4. Note any additional information you think you will need to give the participants, including props and other staging materials. Identify this information to the Exercise Manager or an Exercise Coordinator at or before the October 26, 1988, Controllers' Meeting.
5. Review the Exercise objectives and the Exercise Evaluation form. This is the type of information you will need to record during the Exercise.
6. Brief authorized pre-staged participants on Guidelines for Exercise Conduct and simulated plant conditions.
7. Record the names of any unauthorized pre-staged participants, and instruct them to leave the Exercise area.

B. During the Exercise

1. Identify the Exercise participants in your area. Ensure they understand the Guidelines for Exercise Conduct and complete the attendance record. If participants are busy with emergency response actions, wait until activity slows before taking attendance.
2. Instruct participants that when carrying out their emergency response assignments they are to:
  - a. Walk through the assignment, performing such steps as retrieving tools, equipment and procedures; reporting to supervision and the Simulator Control Room; and wearing protective gear, WITHOUT manipulating plant equipment or controls, unless directed by a controller;
  - b. Observe all security, HP, safety and administrative controls;
  - c. Assume equipment works normally, unless told otherwise by a controller or indicated by Exercise guidelines, props or signs;

**B. During the Exercise (continued)**

- d. Describe all their actions and communications to the controller observing their response.
3. Give participants Exercise conditions and plant and equipment status only when they take appropriate steps to earn the information.
4. Record the actions of Exercise participants on the Exercise Response Record. Try to record something every 2 - 3 minutes. Note any of the following:
  - a. Time at which recalled personnel arrive.
  - b. Information flow between Exercise participants.
  - c. Procedure implementation.
  - d. Actions taken in response to Exercise.
  - e. Use of "THIS IS A DRILL" with all communications.
  - f. Audibility and accuracy of PA announcements.
  - g. Location of any defective or muted PA speakers.
5. Check with an Exercise Coordinator if any problems arise, especially if:
  - a. Timing of cue cards or responses is in question.
  - b. Response to Exercise conditions is different than expected.
  - c. Questions arise about how far to carry Exercise responses.
6. Participants' responses may be corrected at any time, to maintain Exercise continuity or to provide training. These corrections must be recorded.
7. HP Leader Controller (TSC): Verify the HP computer is operated using Exercise data.
8. OSC Team Controller:
  - a. Ensure controllers accompany teams as identified on the Team/Controller List; track assignments of teams already in field, in case they are redirected to locations requiring specific controllers.
  - b. If any teams are dispatched without controllers, give them the instructions for participant response listed in 2. above. Instruct them to contact you from the field if they have any questions, and to report their actions to you before reporting in to the OSC for debriefing.
9. The Exercise will be terminated by the Exercise Manager, after play at all locations has reached a logical stopping point. Facility Controllers will be notified about 10 minutes before that to inform other controllers.
10. The Exercise may continue at the EOF and Alternate EOF after the Exercise Manager secures onsite play. In that case, EOF Controllers will get direction from the Manager, NA&EP, assisted by the Offsite Exercise Coordinator.

C. After the Exercise

1. Conduct a debriefing of Exercise participants in your area immediately after the Exercise. This may be done alone or with other controllers. The following specific items should be discussed:
  - a. Brief review of the Sequence of Events
  - b. Statement of any objectives applicable to your area, and preliminary results
  - c. Brief description of any Exercise response deficiencies
  - d. Request for participant response to the items above
2. Collect Exercise Participant Comments.
3. Complete the Exercise Evaluation as soon as possible after the Exercise.
4. Explain any unsatisfactory areas in the appropriate comment sections.
5. Note procedures, actions, etc., that worked well or were particularly successful.
6. Turn in completed Evaluations, Participant Comments, and collected Exercise materials, log sheets, etc., to your facility controller by 1600, on Wednesday, 10/26/88.
7. Attend the controllers debriefing on 10/27/88, from 1030 to 1130, in classroom 11 at the Training and Education Center (TEC).

EXERCISE EVALUATION

NAME \_\_\_\_\_

PAX \_\_\_\_\_

EXERCISE LOCATION \_\_\_\_\_

INSTRUCTIONS

1. Evaluate participants' performance of each item below. Use applicable procedures for criteria to determine SAT/UNSAT performance. Designate N/A if performance of item is not required by the Exercise conditions or otherwise does not apply to participants being evaluated..
2. Explain any UNSAT items in the comment section. Indicate by number the item which the comment applies to.
3. Recommend area(s) for corrective action for UNSAT items: procedure revisions (EPIP); training (TRNG); equipment and/or facilities repairs and modifications (E&F); Exercise materials or methods (DRILL).
4. Explain any areas of concern or unsatisfactory performance which are not included as specific evaluation items.
5. Note any especially good performances; or good practices which are not proceduralized.

**COMMENTS:**

10. OBJECTIVES (continued)

10.4 Demonstrate the ability to transmit information between the TSC and the EOF without adversely affecting protective action recommendations for the general public in accordance with EPIPs and ESO Procedures.

SAT  UNSAT  N/A

10.5 Demonstrate the ability to transmit information between the TSC and the EOF without adversely affecting emergency classification in accordance with EPIPs and ESO Procedures.

SAT  UNSAT  N/A

10.6 Demonstrate the communication of radiological information by TSC Health Physics personnel to other emergency response personnel following TSC activation by updating status boards and reporting significant radiation monitor changes, field monitoring results and dose projections within 15 minutes of determination, consistent with other emergency response priorities.

SAT  UNSAT  N/A

10. OBJECTIVES (continued)

10.7 Demonstrate the adequacy of SCE radiation monitoring team deployment to provide continuous radiological assessment without adversely affecting onsite or offsite protective action recommendations.

SAT  UNSAT  N/A

10.8 Demonstrate the ability to obtain and analyze in-plant radiological samples, in accordance with station procedures.

SAT  UNSAT  N/A

10.9 Demonstrate operation of the onsite emergency siren system and coordination of site PA announcements in accordance with EPIPs.

SAT  UNSAT  N/A

10.10 Demonstrate the assembly of selected site personnel at designated assembly areas in accordance with EPIPs and Security procedures.

SAT  UNSAT  N/A

## EXERCISE EVALUATION

PAGE 14 OF 15

### 10. OBJECTIVES (continued)

- 10.11 Demonstrate OSC logging and issue of dosimetry, and the ability to accurately track and control exposure of emergency response personnel, without delaying emergency response teams involved in critical actions.

SAT  UNSAT  N/A

- 10.12 Demonstrate contamination control at the OSC in accordance with Health Physics procedures and sound practices.

SAT  UNSAT  N/A

- 10.13 Demonstrate the debriefing of emergency response teams accurately within 15 minutes of return to the OSC, consistent with the dispatch of other teams.

SAT  UNSAT  N/A

- 10.14 Demonstrate EOF access control and the accountability of EOF personnel in accordance with ESO procedures.

SAT  UNSAT  N/A

## **EXERCISE EVALUATION**

PAGE 15 OF 15

## 10. OBJECTIVES (continued)

- 10.15 Demonstrate radiological controls at the EOF in accordance with ESO procedures and sound Health Physics practices, including dosimetry issue and contamination control.
  - 10.16 Demonstrate the ability to determine and implement appropriate measures for controlled recovery and reentry in accordance with the SONGS Emergency Plan and EPIPs.
  - 10.17 Demonstrate controllers' control of Exercise conduct, participation in player debriefings, and evaluation of players' responses in accordance with Drill Controller Program requirements.

EXERCISE PARTICIPANT COMMENTS

NAME: \_\_\_\_\_

PAX: \_\_\_\_\_

EXERCISE LOCATION: \_\_\_\_\_

The questions below are grouped in general categories of emergency preparedness and Exercise conduct. Please answer those questions that are pertinent to this Exercise, and explain any unsatisfactory areas in the comment section.

1. PROCEDURES

1.1 Was variance from procedures necessary?

(YES/NO/N/A) \_\_\_\_\_

1.2 Was procedural guidance adequate?

(YES/NO/N/A) \_\_\_\_\_

1.3 Did procedural requirements interfere with event response?

(YES/NO/N/A) \_\_\_\_\_

## **EXERCISE PARTICIPANT COMMENTS**

PAGE 2 OF 4

## 2. FACILITIES AND EQUIPMENT

#### **2.1 Are facilities/layouts conducive to required activities?**

(YES/NO/N/A) \_\_\_\_\_

2.2 Is accessibility to monitoring equipment, tools, reference documents, status boards, etc., adequate?

(YES/NO/N/A) \_\_\_\_\_

### 2.3 Was equipment required for this activity available and operational?

(YES/NO/N/A) \_\_\_\_\_

2.4 Did lack of equipment availability or operability interfere with activity?

(YES/NO/N/A) \_\_\_\_\_

**ADDITIONAL COMMENTS:**

## **EXERCISE PARTICIPANT COMMENTS**

PAGE 3 OF 4

### **3. TRAINING**

3.1 Were you familiar with assigned equipment and its intended use?

(YES/NO/N/A) \_\_\_\_\_

### 3.2 Were you generally familiar with procedures?

(YES/NO/N/A) \_\_\_\_\_

### 3.3 Were you aware of the decision-making process?

(YES/NO/N/A) \_\_\_\_\_

3.4 Did you understand the event to which you were responding and your assigned role?

(YES/NO/N/A) \_\_\_\_\_

### 3.5 Do you think that you were effectively involved in accident assessment and mitigation?

(YES/NO/N/A) \_\_\_\_\_

**ADDITIONAL COMMENTS:**

## **EXERCISE PARTICIPANT COMMENTS**

PAGE 4 OF 4

#### **4. EXERCISE CONDUCT AND PLANNING**

#### 4.1 Was timing of events appropriate?

(YES/NO/N/A) \_\_\_\_\_

#### 4.2 Was adequate information supplied/available?

(YES/NO/N/A) \_\_\_\_\_

#### **4.3 Did technical shortcomings of scenario interfere with Exercise conduct or response?**

(YES/NO/N/A) \_\_\_\_\_
