Director of Nuclear Reactor Regulation
Attention: Mr. D. L. Ziemann, Chief
Operating Reactors Branch #2
Division of Operating Reactors
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Gentlemen:

Subject: Docket No. 50-206
Appendix I Technical Specifications
San Onofre Nuclear Generating Station
Unit 1

In our letter to you dated November 14, 1978, we indicated that we had received the model Appendix I Technical Specifications (NUREG 0472) by letter dated June 11, 1978. An enclosure to that NRC June 11, 1978 letter requested that we submit a license amendment incorporating the model Technical Specifications into our Appendix A Technical Specifications within 120 days. It was pointed out in the November 14, 1978 letter that three NRC computer codes necessary to calculate parameters in the model Technical Specifications were not yet available. We further indicated that we would wait until after the one day Appendix I Technical Specifications Seminar held on December 1, 1978 by the Region V Office of Inspection and Enforcement to identify a date for submitting a license amendment incorporating the Appendix I Technical Specifications into our Appendix A Technical Specifications.

Following the December 1, 1978 seminar we received the three NRC computer codes necessary for preparing the Appendix I Technical Specification. Subsequent to receipt of the codes we have received from the NRC additional guidance required to run the computer codes. It appears that the last of such guidance was received by letter dated January 4, 1979.

P

Based on our estimate of the time required to run the computer codes, complete those sections of the Technical Specifications affected by the codes and obtain approval from our nuclear safety review committees the license amendment incorporating the Appendix I Technical Specifications into our Appendix A Technical Specifications will be available for submittal by March 30, 1979.

If you have any questions regarding this matter, please let me know.

Very truly yours,

A handwritten signature in dark ink, appearing to read "J. G. Haynes". The signature is fluid and cursive, with a long horizontal stroke at the end.

J. G. Haynes
Chief of Nuclear Engineering
