U. S. Nuclear Regulatory Commission  
Attention: Document Control Desk  
Washington, D.C. 20555

Gentlemen:

Subject: Docket No. 50-206  
SEP Topics: III-2, Wind and Tornado Loadings  
                  III-4.A, Tornado Missiles  
                  San Onofre Nuclear Generating Station  
                  Unit 1

As you are aware, we are preparing an analysis which will demonstrate that the tornado modifications proposed for San Onofre Unit 1 will not be necessary. This analysis will be based on probabilistic risk assessment techniques. We had previously stated that our analysis would be submitted by approximately April 30, 1990; however, due to our heavy work load in preparation for the upcoming Cycle 11 refueling outage, the submittal of this analysis must be rescheduled until August 30, 1990. Since this issue is to be resolved for Cycle 12, which is not scheduled to begin until September of 1992, this four month delay should not significantly impact NRC review.

If you have any questions regarding this matter, please call me.

Very truly yours,

cc: J. B. Martin, Regional Administrator, NRC Region V  
C. Caldwell, NRC Senior Resident Inspector, San Onofre Units 1, 2 and 3
