Gentlemen:

Subject: Docket No. 50-206
Offsite Dose Calculation Manual
San Onofre Nuclear Generating Station
Unit 1

As agreed to in our conversation with E. McKenna on September 14, 1984, SCE committed to submit revised page 2-39 of the Offsite Dose Calculation Manual (ODCM). The purpose of this letter is to submit revised page 2-39 which shows the correct calculation for total body liquid dose and removes references to Equations from the Units 2 and 3 ODCM. The discussion on direct dose has been revised to clarify that the annual direct dose is determined by summing the quarterly readings of direct dose. Also, the deletion of material from page 2-39 resulted in a repagination for the remainder of Section 2.4. The revised pages are included as Enclosure 1.

If you have any questions or comments, please let me know.

Very truly yours,

Enclosure
