Director, Office of Nuclear Reactor Regulation  
Attention: Mr. Darrell G. Eisenhut, Director  
Division of Licensing  
U. S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Gentlemen:

Subject: Docket No. 50-206  
Seismic Reporting Requirements  
San Onofre Nuclear Generating Station  
Unit 1

Your letter of November 21, 1984 authorizing resumed power operation of San Onofre Unit 1 included guidance to be used for determining reportability for both seismically upgraded and non-upgraded structures, systems and components.

We have reviewed the application of these reporting requirements as they would apply to the ongoing seismic reevaluation program and have concluded that further clarification is warranted. We are now developing information to clarify and amplify these requirements and will provide this information to you by December 7, 1984.

Please contact me if you have any questions.

Very truly yours,

*Kenneth P. Baskin*
