SAFETY EVALUATION BY THE OFFICE OF NUCLEAR REACTOR REGULATION

SOUTHERN CALIFORNIA EDISON COMPANY

SAN ONOFRE NUCLEAR GENERATING STATION, UNIT NO. 1

DOCKET NO. 50-206

PROCESS CONTROL PROGRAM

1.0 INTRODUCTION

On August 27, 1984 the staff issued Amendment No. 79 to the Provisional Operating License (DPR-13) for the San Onofre Nuclear Generating Station, Unit No. 1. The amendment incorporated the Radiological Effluent Technical Specifications (RETS) into the San Onofre 1 Technical Specifications (TS). Section 6.16 of the TS referenced a Process Control Program (PCP) and prescribed the methods for changing it.

2.0 EVALUATION

By letter dated November 2, 1984, Southern California Edison Company (SCE, licensee) provided copies of the PCP.

The staff has reviewed the PCP and found that it uses documented and approved methods that are consistent with current NRC guidelines (issued January 1982). The PCP is therefore approved for use with San Onofre 1 Technical Specification 6.16.

The acceptability of this PCP is based on currently available guidelines, but a future revision should address compliance with 10 CFR Part 61 when revised guidance becomes available.

3.0 CONCLUSIONS

The San Onofre 1 PCP is approved for use with San Onofre 1 Technical Specification 6.16.

4.0 ACKNOWLEDGEMENT

W. Meinke prepared this Safety Evaluation.

Dated: April 22, 1985.
