Director, Office of Nuclear Reactor Regulation  
Attention: G. E. Lear, Director  
PWR Project Directorate No. 1  
U. S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Gentlemen:

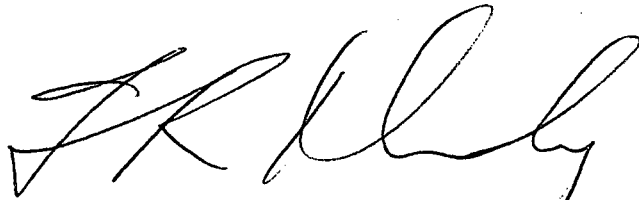

Subject: Docket No. 50-206  
Schedule for Investigation of Crankshaft Transient  
Torsional Stress on TDI Diesel Generators  
San Onofre Nuclear Generating Station  
Unit 1

Reference: Letter, Richard F. Dudley, NRC, to Kenneth P. Baskin, SCE,  
dated May 27, 1986

The referenced letter requested SCE to provide a schedule for investigation of alternatives and associated corrective actions to reduce crankshaft transient torsional stresses on our standby diesel generators. We are currently performing a study of alternatives and expect to determine any necessary corrective measures by December 31, 1986. We will inform you of our determination at that time.

If there are any questions or you require additional information, please let me know.

Very truly yours,

  
for M. O. Medford
